

WG6: Wide bandgap and innovative sensor materials

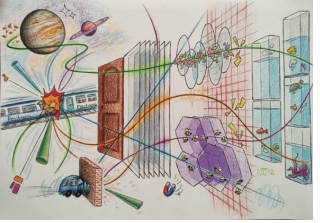

News & Plan

Alexander Oh, Xin Shi, Tao Yang

20 December 2024

- Welcome Tao Yang as co-convenor of WG6!
 - Will be mainly focus on GaN and innovative sensor materials
- Towards MoU
 - WP3: recommended to merge same material into one WP project, e.g. WP3-SiC, WP3-GaN
 - Some feedback concern it's too big, any feedback?
 - We can keep granular sub-project internal
- We need to have those ready by the mid January – not all, but some for start. 18th DRD3 Steering meeting
 - Let's make an exemplary WP project inside each WP 17.12.2024
 - As soon as the WP project is ready and has resources (financial and manpower) to start it can even it is not in MoU – it can be backdated.
 - The time-line:
 - in mid-January we should have the WP projects (limited number) ready. It is on WP conveners to decide which are mature enough.
 - **we need to review them by mid-february** so that by DRDC review we can present something.

Plan

- We'll have our first meeting on 15-Jan-2025

Happy Holidays !
