

Light Meson decays at BESIII

The world's largest sample of J/ψ events accumulated at the BESIII detector offers a unique opportunity to investigate η and η' physics via two body J/ψ radiative or hadronic decays. In recent years the BESIII experiment has made significant progresses in η/η' decays. A selection of recent highlights in light meson spectroscopy at BESIII are reviewed in this report, including observation of the cusp effect in $\eta' \rightarrow \pi^0 \pi^0 \eta$, transition form factor measurements, as well as the search for rare/forbidden decays of η/η' .
