<p>Facility Status</p>																																																								
<p>Summary</p>	<p>Again, a busy week with several electrical emergency stops tests and general YETS work still ongoing.</p>																																																							
<p>Issues</p>	<p>Mon 10/02/25 09:08 During the AUG test in BA7 an AUG chain for ME59 was activated and caused the cooling to stop for the TCR. EN-EL will add the information about this AUG chain in the logic of the AU in BA7 to avoid such problems in the future.</p> <p>Mon 10/02/25 ROG down caused trouble for equipment groups who could not connect to TN. When more than 2000 connections are happening, the service reboots itself.</p> <p>Wed 12/02/25 09:16 Elevator PZ85 unavailable due to a major mechanical failure.</p> <p>Fri 14/02/25 10:35 FB informed TI of a water leak in US65. The presence of water was due to a cryogenic's filter washing, reject water was not evacuating properly.</p>																																																							
<p>Plans</p>
