Minutes of Grid Services Monitoring WG phoneconf.

17-Apr-2007

Present: Ian Neilson (Minutes), German Cancio, Piotr Nyczyk, Steve Fisher, Luigi Zangrando, Emir Imamagic, Max Boehm

IanN introduced Max Boehm, consultant from EDS working via Openlab collaboration.

Grid Monitoring Data Exchange

https://twiki.cern.ch/twiki/bin/view/LCG/GridMonitoringDataExchangeStandard

Piotr credit to useful input from Paul Millar. Some discussion –
* investigating RDF in the future - agreed as out of scope for the present group's work.
* goal of the standard to be simple compared to full WS standards, XML/RPC or SOAP
* since get or post methods are allowed limitations on length of url with arguments should not be a problem

Monitoring Prototype Status

No additional comments on prototype status report to mailing list. Emir expected to publish documentation very soon. Asks if way Nagios stores data as status changes (freshness would be only implicit) rather than each result would be a problem. Since last status change and time of latest test are known publisher can derive required information so agreed this should not cause problem.

AOB

IanN to give presentation to Hepix next week.
Discuss a possible future F2F on mailing list.
Schedule another meeting in 2 weeks – 1st May.
