Mea Culpa

I hope Latin
makes this seem
more sincere
than it is

THIS YEAR 2025

is a Square Year!

It Has Some Special Mathematical Properties

- ~ 2025 is a **Perfect Square** = $45 \times 45 = 45^2$
- ~ 2025 is the **Product of 2 Squares**: $9^2 \times 5^2 = 2025$
- ~ 2025 is the **Sum of 3 Squares**: $40^2 + 20^2 + 5^2 = 2025$
- ~ 2025 is the **Sum of the Cubed Digits from 1 to 9**
ie: $1^3 + 2^3 + 3^3 + 4^3 + 5^3 + 6^3 + 7^3 + 8^3 + 9^3 = 2025$

It's the first **Square Year** after 1936 (= 44^2) and will not happen again until 2116, which is 92 years away. This means that this Year 2025 will be the only **Square**

1^3	2^3	3^3
4^3	5^3	6^3
7^3	8^3	9^3

I got a feelin'
25's gonna be a good year
25's gonna be a good year
25's gonna be a good, good year

2025 is the year when...

We get enough EU projects to secure our budget until 2029...

We consolidate i2P and write a guide for practitioners...

We share the educational programs workload the best we can...

We increase our prototyping offer for CERN folks...

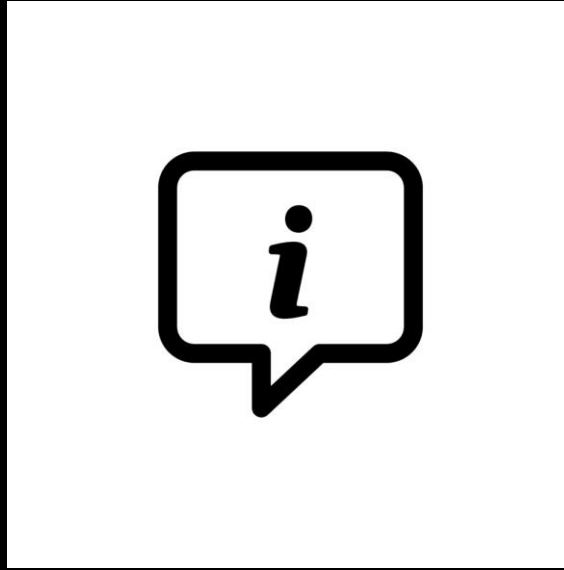

We publish our first and second paper on i2P...

We become viral in social media...

We write the most outstanding progress report ever...

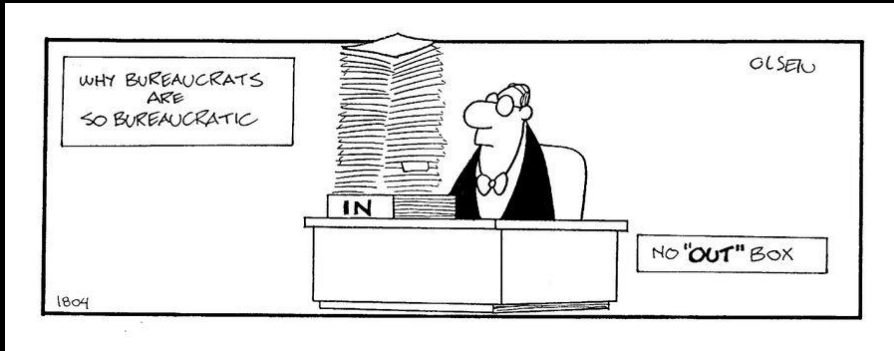

We improve IdeaSquare space...

What I am personally interested about today...

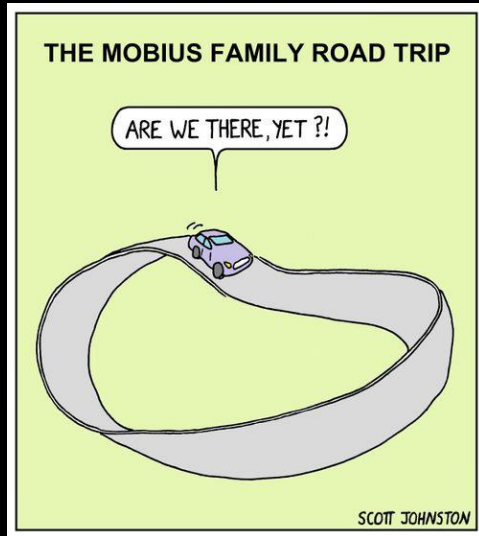

How we figure out these things and more will happen...

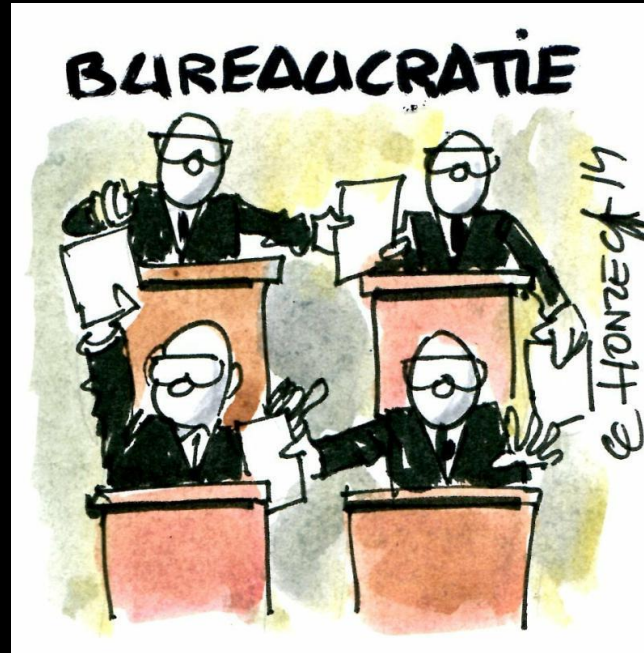

What I am **very little to nothing** personally interested about today...

Discussions with no solutions proposed

Discussions without a purpose

Discussions without decisions

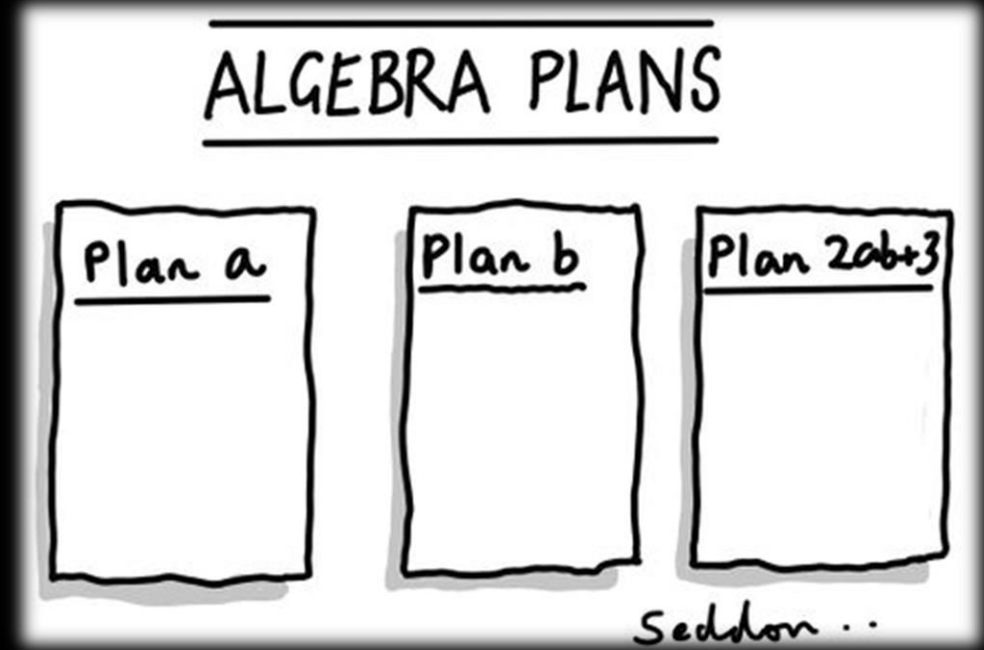

Discussions, again, about mission, vision and values

...but please, feel welcome to bring it in if that is your wish.

What I am **fully** interested about today...

Your personal plans for your future

Thanks a lot to all and questions
