Standards for Web Service Grid Infrastructure

Thursday 28 September 2006 09:45 (45 minutes)

Some aspects of standards based Web Service Grids are now stable, e.g. WS-Addressing, WS-Security, others are still in flux, in particular the the extended infrastructure related specifications needed for grids and management. Although the notion of stateful resources has been widely accepted by most segments of the community, the details of it's rendering are still evolving. In this talk we look at this stable set of concepts and the current status of standards development for them.

Presenter: Dr SNELLING, David (Fujitsu)

Session Classification: Plenary
