## A VO-oriented AAA framework

*Tuesday, 26 September 2006 14:00 (20 minutes)*

An integrated framework, based on EGEE tools, providing respectively a credential authority (VOMS), a policy-based authorization system (G-PBox) and an accounting system (DGAS). This framework enables VO/experiment to build groups of users, assign roles and associate policies and quotas to each group and role in a dynamic way, implementing an automatic way to enforce agreements with the resource owners.
