

Enabling Grids for E-scienceE

# Introduction to the User Information Group (UIG)

*Brendan Hamill, NA3 Activity Manager  
NeSC Edinburgh*

[www.eu-egee.org](http://www.eu-egee.org)

- **Introduction** **Brendan Hamill**
- **Progress so far** **Stephen Burke**
- **UIG and Training** **Mike Mineter**
- **Plans for the future** **Cal Loomis**
- **Dissemination from NA3/4** **Hannelore Hammerle**
- **EGEE User relationships** **Claus Jacobs**

- User Information Group was set up in phase one of EGEE, to address a perceived lack of easily accessible user-friendly documentation
- However, little was actually achieved before the end of phase one
- In EGEE-II, the group has been reconstituted, with members from NA1, NA2, NA3, NA4, SA1, JRA2 and a mandate has been approved by the PEB  
(<https://edms.cern.ch/file/753620/1/UIG-mandate.doc>)
- Five teleconferences have been held to date, and a programme of work is in progress

- To oversee the provision of a service for users, giving simple access to information including documentation, contacts, links to sites, access to user support, training, workshops, etc.
- To ensure that documentation and information related to activities is accessible in a coordinated way

# What UIG does NOT do:

The UIG does NOT provide information for:

- operation or installation of the EGEE infrastructure
- general user-support issues
- education planning

The UIG does NOT:

- critique operations, middleware and documentation, *(other than to flag up inconsistencies or shortcomings)*
- try to act as an intermediary between activities *(except in matters affecting the aims of the UIG)*

## What the UIG will do:

- **perform an editorial role by means of a systematic, continual review of the existing information to ensure that it meets the needs of the user community**
- **identify missing documentation/information**
- **prioritize needed items**
- **suggest the activities/people who could provide them.**

## More general activities:

- **produce and maintain an overview document describing the basic grid capabilities and strategies and EGEE middleware and infrastructure**
- **Identify appropriate people to produce and update use cases**
- **consult the QAG on matters such as quality control and tools for web-sites**

- ***Per-discipline web pages:***

A web page for the manager of each scientific discipline to provide information on existing grid applications in that discipline.

- ***External services:***

A section which describes application-level services which have been used in conjunction with the gLite middleware.

- ***Search facilities:***

A centralized, coordinated search facility for all of the EGEE information. Should include GGUS, presentations, meeting agendas, meeting minutes, portal news, use case descriptions.

- ***Forum:***

Open forum for users and groups to exchange information.  
Possible technologies would be a mailing list, chat, or wiki.

- overview
- Virtual Organizations (VOs)
- WORM data model
- inside/outside grid
- technicalities
- references

- **Provision of user scenarios is the best mechanism to have a modular, flexible, easily-maintained user guide.**
- **Being small, a large number of different people can contribute to these and they can be arranged in increasing complexity to address the needs of users with different levels of expertise.**

- **get certificate (detailed by country/CA;  
- maybe part of Quick Start Guide)**
- **run a job (hello world)  
+ series of increasingly complex cases**
- **copy/register/access files on the grid**
- **recovering results (and viewing results)**
- **monitoring job status**
- **preparing a job**

- **resource/service discovery**
- **linking jobs/data - jobs with data requirements**
- **environment setup (staging)**
- **monitoring status**
- **software installation (with a job, via SE)**
- **short-deadline job submission**

- **software installation (installing software on site)**
- **large-scale data transfer**
- **monitoring status (e.g. via R-GMA)**
- **data encryption**
- **AMGA metadata**
- **MPI**
- **workflow examples**
- **VO deployed services**
- **Biomed app kernel**
- **Geo app kernel**

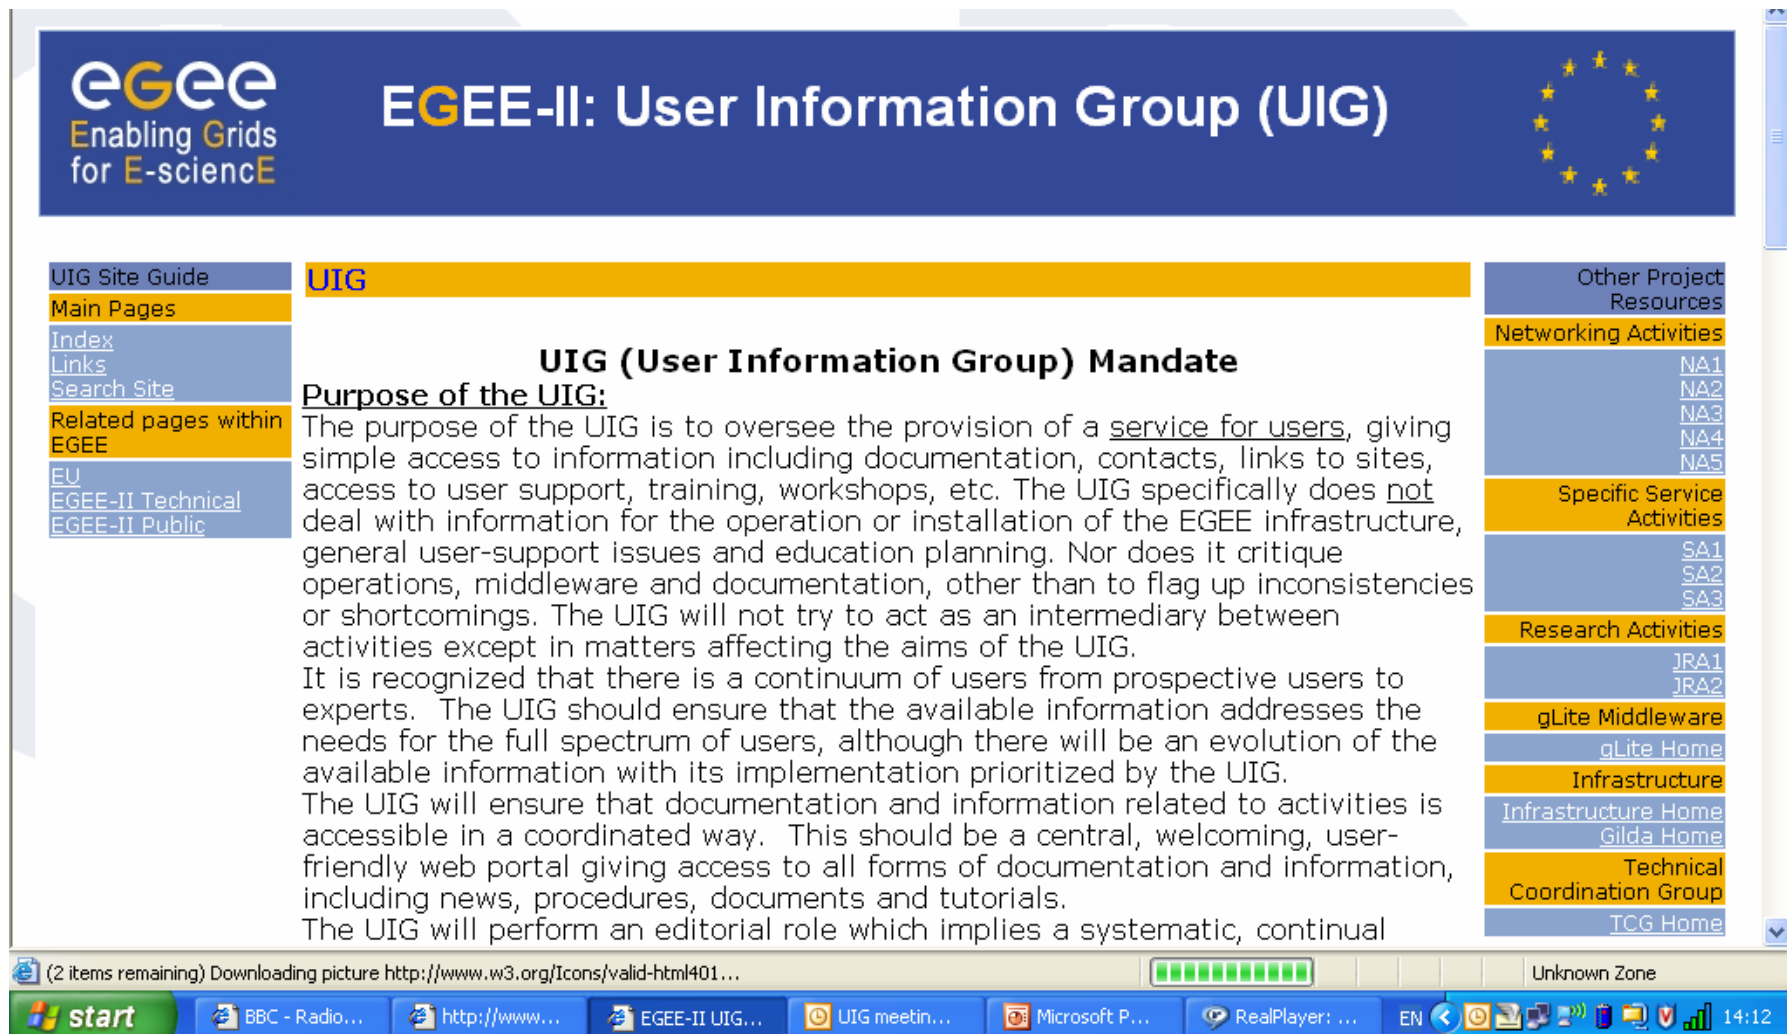

USER INFORMATION GROUP

## Every page should display prominently:

- Version number of page
- Date of last review
- Date next review due
- Contact e-mail address for problem notification

**EGEE-II: User Information Group (UIG)**

**UIG (User Information Group) Mandate**

**Purpose of the UIG:**

The purpose of the UIG is to oversee the provision of a service for users, giving simple access to information including documentation, contacts, links to sites, access to user support, training, workshops, etc. The UIG specifically does not deal with information for the operation or installation of the EGEE infrastructure, general user-support issues and education planning. Nor does it critique operations, middleware and documentation, other than to flag up inconsistencies or shortcomings. The UIG will not try to act as an intermediary between activities except in matters affecting the aims of the UIG.

It is recognized that there is a continuum of users from prospective users to experts. The UIG should ensure that the available information addresses the needs for the full spectrum of users, although there will be an evolution of the available information with its implementation prioritized by the UIG.

The UIG will ensure that documentation and information related to activities is accessible in a coordinated way. This should be a central, welcoming, user-friendly web portal giving access to all forms of documentation and information, including news, procedures, documents and tutorials.

The UIG will perform an editorial role which implies a systematic, continual

- Will link to existing documents (e.g. User Guide)
