Technologies

DILIGENT in a nutshell

From documents onto computers
to
content in the infrastructure

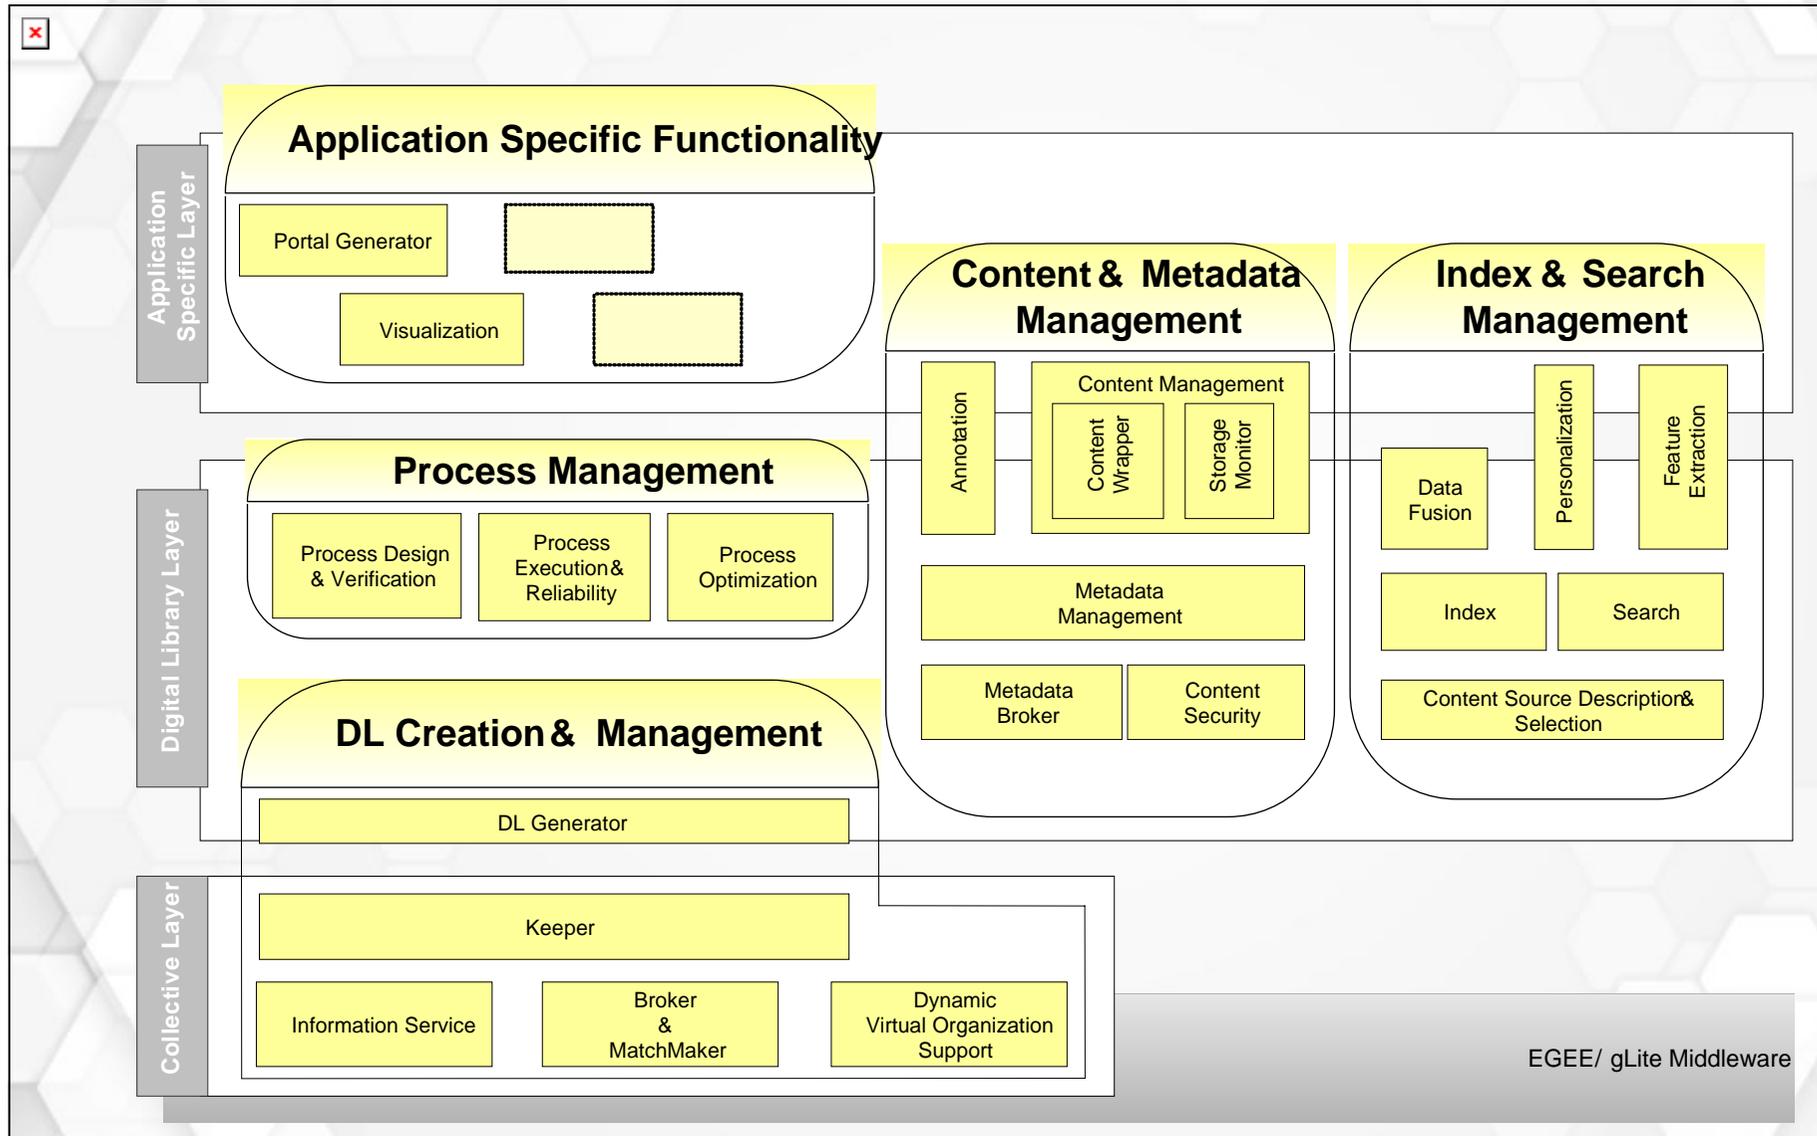

DILIGENT objectives

Develop a **Digital Library Test-bed Infrastructure** that will allow members of dynamic virtual research organizations to create on-demand transient digital libraries based on shared computing, storage, multimedia, multi-type content and application resources

"Digital libraries are not ends in themselves; rather they are enabling technologies for digital asset management, electronic commerce, electronic publishing, teaching and learning, and other activities."

Fourth DELOS Workshop, Budapest, 2002

DILIGENT Architecture

DILIGENT Development Environment

- Java 1.5 and Eclipse (mostly)
- Aim to be compliant with WSRF
- A versioning system per partner (Subversion and CVS)
- Savannah for bug-tracking and current development status

- As Build system initially was proposed (?)Source

- Currently have been developed 16 subsystems and about 180 components (an estimation of 18 classes, 250 loc per classes).

DILIGENT plans for using ETICS

WP1.2-6

T1.8.5 User support & feedback

WP2.X
Validation

Release Plan

DILIGENT VCSs Status

Currently 5 VCS are in use within the DILIGENT project;

- 3 of them are published in ETICS:
 - ◆ CNR (Subversion), hosting:
 - ▶ DIS, Keeper, VDLGenerator, IndexService, Process* (by UNIBAS)
 - ◆ ENG (CVS), hosting:
 - ▶ DVOS
 - ◆ UoA (CVS), hosting:
 - ▶ Portlets, ProcessOptimisation, SearchService

- Not published yet in ETICS:
 - ◆ USG
 - ◆ FhG\IPSI

Building the DVOS

- Re-structure DVOS project on VCS based on ETICS guidelines (0.5MM) - not mandatory
- model DVOS in ETICS (0.5MM)
 - ◆ Create project structure
 - ◆ identify dependencies
 - ◆ Create configurations
 - ◆ Create VCS/Build commands
- Run build (0.0025MM)

Initial feedbacks on Build

- Some concern with confidentiality of code
- Strict related to the possibility to have Commercial projects building with ETICS (the Engineering case)
- The license automatic check (not foreseen by ETICS)
 - ◆ In DILIGENT we have
 - ▶ Mostly Apache 2.0
 - ▶ Many LGPL
 - ▶ One GPL
 - ▶ Some other OS like (CDDL, BC LA, BSD)
 - ▶ One commercial.

Results from Build experience

- Saved planned Effort
 - ◆ 2 MM over 3MM allocated to set-up the build infrastructure
 - ◆ 2 MM over 4MM for managing the builds (estimation over 18Months of elapsed)
- New activities/ extra effort
 - ◆ 1 MM for experimentation
 - ◆ 0,5MM to explore and analyse other (very few indeed) solutions
 - ◆ 0,5MM in the period March-August for delays due to ETICS bugs (estimation)

Deployment Testing overview

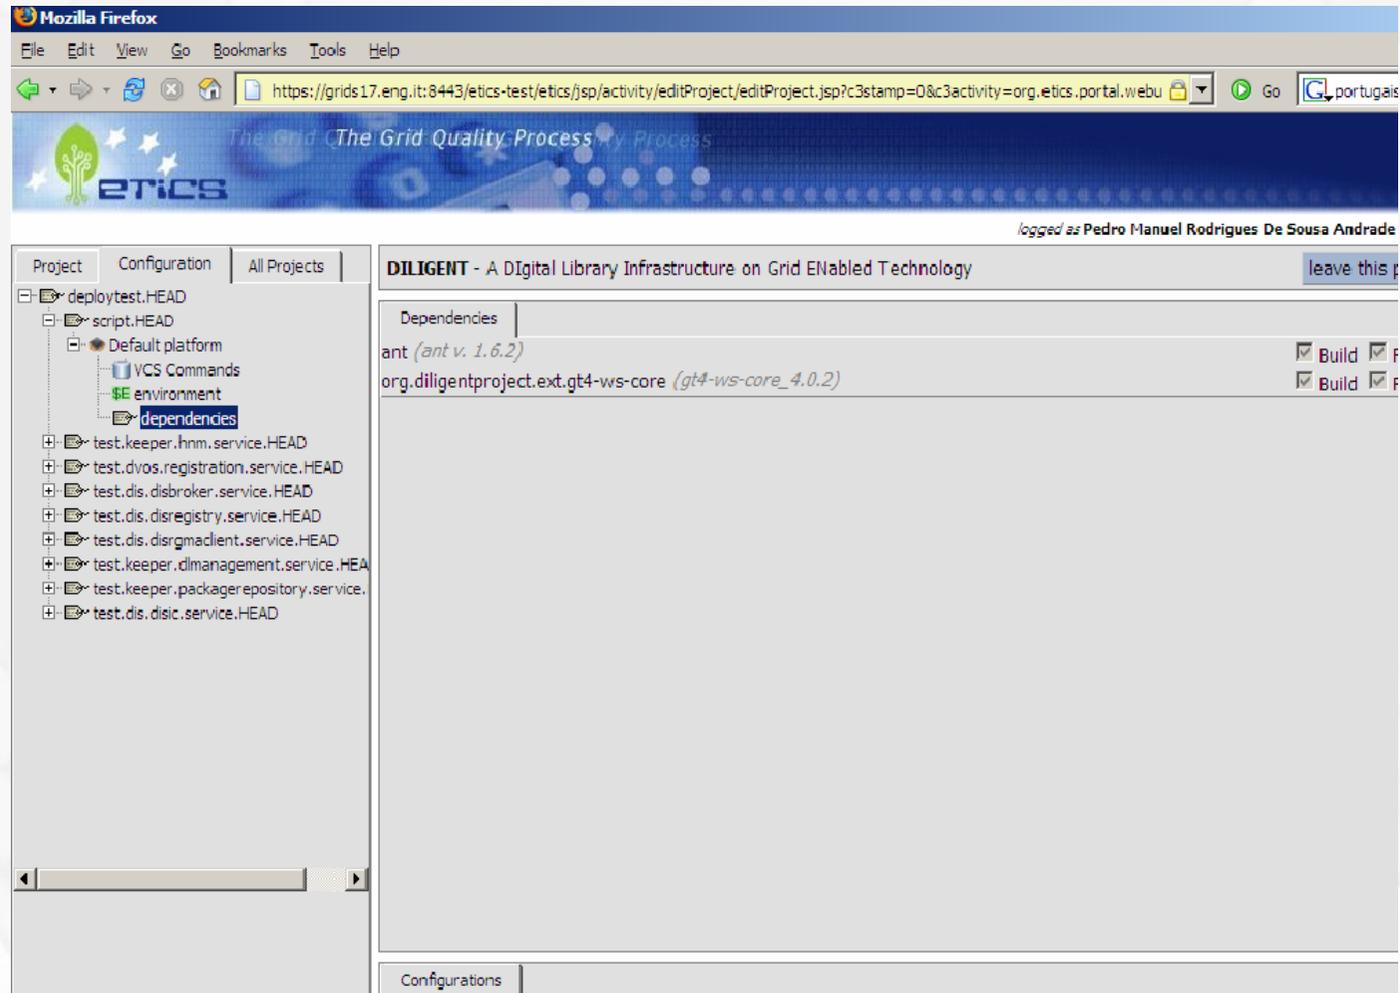

- Goals:
 - ◆ ensure the DILIGENT software is deployable
 - ◆ report and document all the bugs found

- Procedure:
 - ◆ Identify the configuration to be tested:
 - ▶ functionalities > services > ETICS build modules
 - ▶ gather deployment dependencies
 - ◆ Model the identifies configuration into ETICS:
 - ▶ one ETICS deployment module for each DILIGENT service
 - ▶ configuration of the modules dependencies
 - ◆ Test if all modules are deployable
 - ◆ Report all problems found in Savane

ETICS Configuration

- All deployment testing modules are grouped under one common subsystem - "deploytest". This includes:
 - ◆ DILIGENT services modules:
 - ▶ one module for each service to be tested describing the service specific information
 - ◆ Generic deployment script:
 - ▶ copies the libraries to the right place
 - ▶ starts the container
 - ▶ downloads the WSDL file
 - ▶ stops the container

ETICS Configuration

The screenshot shows a Mozilla Firefox browser window displaying the ETICS web application. The address bar shows the URL: `https://grids17.eng.it:8443/etics-test/etics/jsp/activity/editProject/editProject.jsp?c3stamp=0&c3activity=org.etics.portal.webui`. The page header includes the ETICS logo and the text "The Grid Quality Process". The user is logged in as "Pedro Manuel Rodrigues De Sousa Andrade".

The main content area is titled "DILIGENT - A Digital Library Infrastructure on Grid Enabled Technology". It features a navigation menu on the left with tabs for "Project", "Configuration", and "All Projects". The "Configuration" tab is active, showing a tree view of project configurations. The "dependencies" folder is expanded, listing several test services:

- test.keepervhnmservice.HEAD
- test.dvos.registration.service.HEAD
- test.dv.disbroker.service.HEAD
- test.dv.disregistry.service.HEAD
- test.dv.dismgmaclient.service.HEAD
- test.keepervdmanagement.service.HEAD
- test.keepervpackagerepository.service.HEAD
- test.dv.dvdisic.service.HEAD

The main content area displays the "Dependencies" section, listing the following dependencies:

- ant (*ant v. 1.6.2*) Build F
- org.diligentproject.ext.gt4-ws-core (*gt4-ws-core_4.0.2*) Build F

At the bottom of the page, there is a "Configurations" section.

- ETICS python script (temporary solution):
 - ◆ Allowed the creation of the deployment testing system
 - ◆ Useful to start working with ETICS, understanding:
 - ▶ the system organization and parameters
 - ▶ the ETICS databases (etics and etics-cern)
 - ◆ Updates based on sending SQL files not practical !
- CLI
 - ◆ Simple to use (easy to learn how to work)
 - ◆ More functionalities than in the WebApp (august/06)
 - ▶ mainly the edit functionalities
 - ◆ Possibility to use templates
 - ◆ [problem] No batch execution option available

- WebApp
 - ◆ More user friendly
 - ◆ Late availability of WebApp edit mode
 - ▶ always useful to browse 😊
 - ◆ Set dependences between modules functionality:
 - ▶ available few weeks ago
 - ▶ essential to our purposes
 - ◆ [problem] Session expires too quickly
 - ◆ [problem] Navigation sometimes is not intuitive

- The automatic generation of deployment testing reports is an important tool for DILIGENT
- Experimentation just started
- Feedback will be provided

- Easy browsing of all modelled DILIGENT services and therefore easy identification of the deployment testing configurations
- Defined dependencies are automatically solved
- Allows the deployment testing of all DILIGENT services in one execution
- Provides automatic report generation
- Effective support from the ETICS team

- Progressive availability of ETICS clients functionalities
- Difficulties linked to early adoption
 - ◆ Different functionalities available through different interfaces
 - ◆ Planned functionalities not yet available
 - ◆ Lack of documentation
- Clients can be improved (problems highlighted before)

Plans and Wish List

- Plans:
 - ◆ Oct06: start deployment testing for Release Candidate Alpha
 - ◆ Oct06: bug reporting / Report generation

- Wish List:
 - ◆ ETICS scheduler to periodically execute etics-* commands
 - ◆ Report generation:
 - ▶ fully automatic
 - ▶ also available in local execution
 - ◆ Authorization:
 - ▶ at command level (not configuration level)
 - ▶ webapp to display user permissions/roles
 - ◆ Creation of modules/configurations from template in WebApp

Thank you !!!

Questions ??

Visit our stand at the demo and poster session !!
