# About Grid Computing Now!

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

- **A Knowledge Transfer Network project funded by the DTI Technology Programme aimed at transferring knowledge about Grid Computing Technologies to Public and Private Sector Users in the UK.**
- **Partnership between Intellect, the UK Hi-Tech Trade Association; National e-Science Centre, a world leader in Grid Computing research; and CNR Ltd, a consultancy focused on SME organisations and business intermediaries.**
- **Substantial number of industrial, business user and academic partners**

## Development of key technologies (KTNs)

To underpin the high value added areas of the UK Economy

To generate new streams of economic activity in their own right

## Development of “innovation platforms”

The integration of a range of technologies, to meet defined societal need

Combined with better co-ordination of policy and procurement instruments to deliver a step change in UK performance

# Key Technology Areas

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

**Electronics and Photonics**

**Advanced Materials**

**Information and Communication Technologies**

**Bioscience and Healthcare Technologies**

**Sustainable Production and Consumption**

**Emerging Energy Technologies**

**Design Engineering and Advanced Manufacturing**

# Grid Computing Now! Objectives

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

1. **Establish wide understanding of the potential of Grid Computing particularly among the IT user community**
2. **Accelerate the recognition of requirements and issues for Grid Computing**
3. **Prepare the UK ICT industry, users and government for Grid Computing**
4. **Follow through the e-Science Core Programme vision in which demanding scientific research stimulates significant advances in Grid technology which are then transferred to UK industry, healthcare and government.**

**The KTN will engage: IT and business leaders, policy makers in central government, regional government, regional development agencies and the devolved administrations, specialist grid suppliers and service providers, e-Science researchers, consultants and business intermediaries to promote grid computing as a foundation for secure, dynamic, virtual organisations to obtain competitive advantage.**

## Some Key Facts:

- **3 yr, £1M/\$1.8M Funding**
- **Leading suppliers engaged**
- **Website live August 2005**
- **>500 network members**
- **80% Business**
- **#27 Google “Grid Computing”**
- **600 unique visits/month**
- **90% Returning members**
- **Average visit duration >5mins**
- **14 Case Studies**
- **6 Invited Industry Talks**
- **>20 Target Media Articles**

# Why Grid Computing?

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

## What is Grid Computing and the capabilities it holds for business?

- Grid computing harnesses the massive processing power made possible by distributed computing and applies it to business problems.
- It does this through virtualising computers, storage and networking resources such that a grid appears as one large computer.
- A grid computing infrastructure is capable of managing large peaks of work; managing large amounts of processing and automatically adjusting capacity to meet workload.
- When this infrastructure is combined with business systems that allow users to describe their processes, substantial benefits can be obtained.

## What benefits does Grid Computing bring to users?

- Improved Return on Assets
- Increased Scalability
- Business Flexibility & Agility
- Managing IT Complexity

# Tangible KTN Deliverables

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

## Short

- Newsletters
- Debates
- Identify technology priorities
- Roadmapping
- Country Reports
- UK Promotion
- Rising % of Target Stakeholders
- Benchmark UK Capability

## Medium

- Inward Investment
- Missions
  - Follow-up Reports
  - Collaboration
- Patenting
- R&D Intensity

## Long

- Growth in UK:
  - output
  - employment
  - Value added
- Standards
- BERD 1.8%GDP

# Implementation Challenges

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

## Overcoming the Market Confusion!

It's not just hype!

### Different Business Drivers

Where is the ROI?

### System planning

Network, storage, processors

Middleware or application server?

In house, outsource or vendor?

### Migration strategy

Legacy encapsulation or replacement?

### Cost model

Accounting

License management

# Grid Computing Now! Plans ...

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

## Strategy:

- Engage & Influence IT leadership in Sectors with potential
- Identify more success stories!
- Capitalise on collaborative R&D progress
- Generate media attention
- Energize community of Grid enthusiasts, experts

## Sector Agenda

### Pilot Projects:

- Government Infrastructure
- Healthcare
- Transport

### Leverage Collaborative Projects

## Technical Events

### Webinars

### Face to face Showcase events

## Media

### Case Studies

### Competition

### Industry platforms

# Grid and the Public Sector

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

## Observations:

- **Highly relevant as part of a service orientated infrastructure**
- **Major changes underway in e-Government initiatives**
  - Conduct of government
  - Delivery of services
- **Major programmes underway**
  - Eg. Connecting for Health
  - Mostly outsourced/contracted
  - Limited departmental responsibility

## Nevertheless:

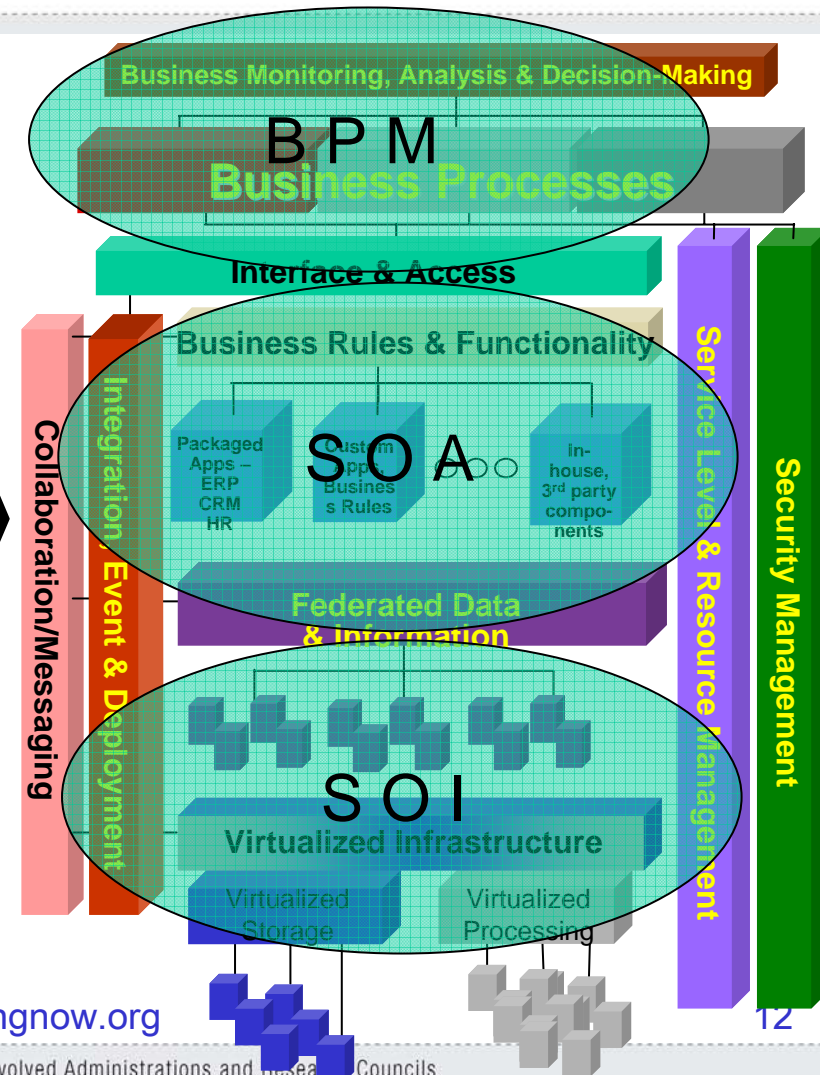

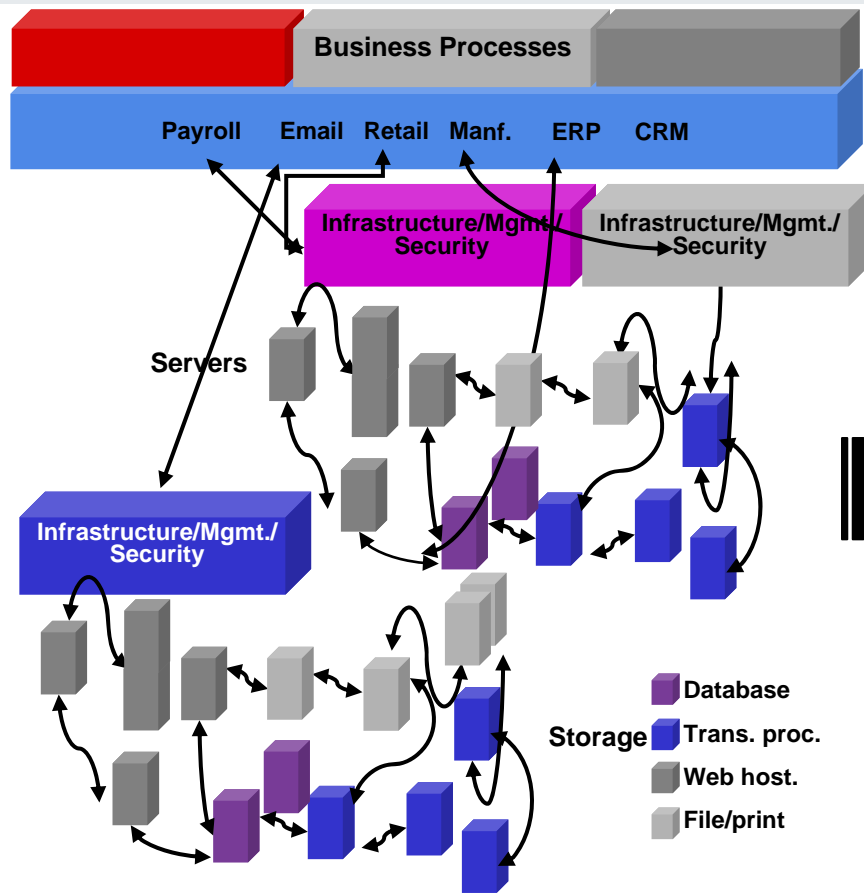

- **Opportunities of Grid enabled patient innovations**
  - eDiaMoND
  - Cancer Grid
  - Healthcare@home
- **Opportunities in integrated services delivery**
  - Transport Information Services
- **Opportunities in collaboration across outsourced environments**
  - Central & Local Government

# Establishing Business Process Management

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

# The Internet, Web & Open Standards are a new wave

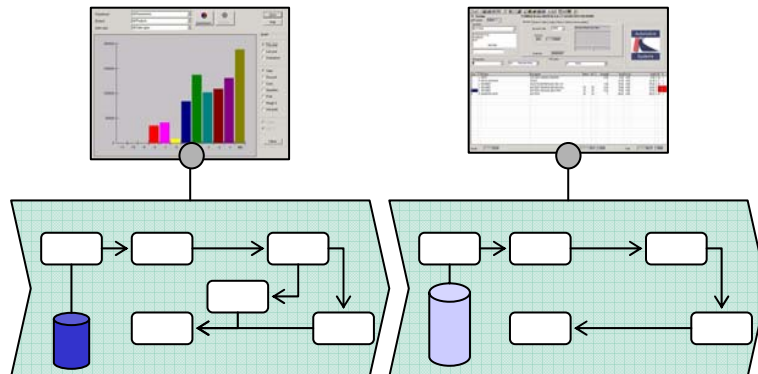

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

## Today's world

Business scenarios defined within applications

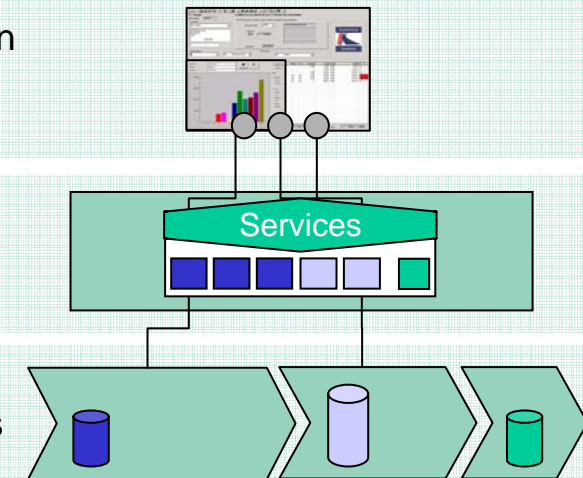

- Processes and business scenarios “hard-wired” within applications
- Hard to make business connections necessary to change and improve processes
- IT's speed of change is limiting factor on business speed of change

## Service Oriented Enterprise

Event Driven Business Scenario

Assembly of Services

Applications

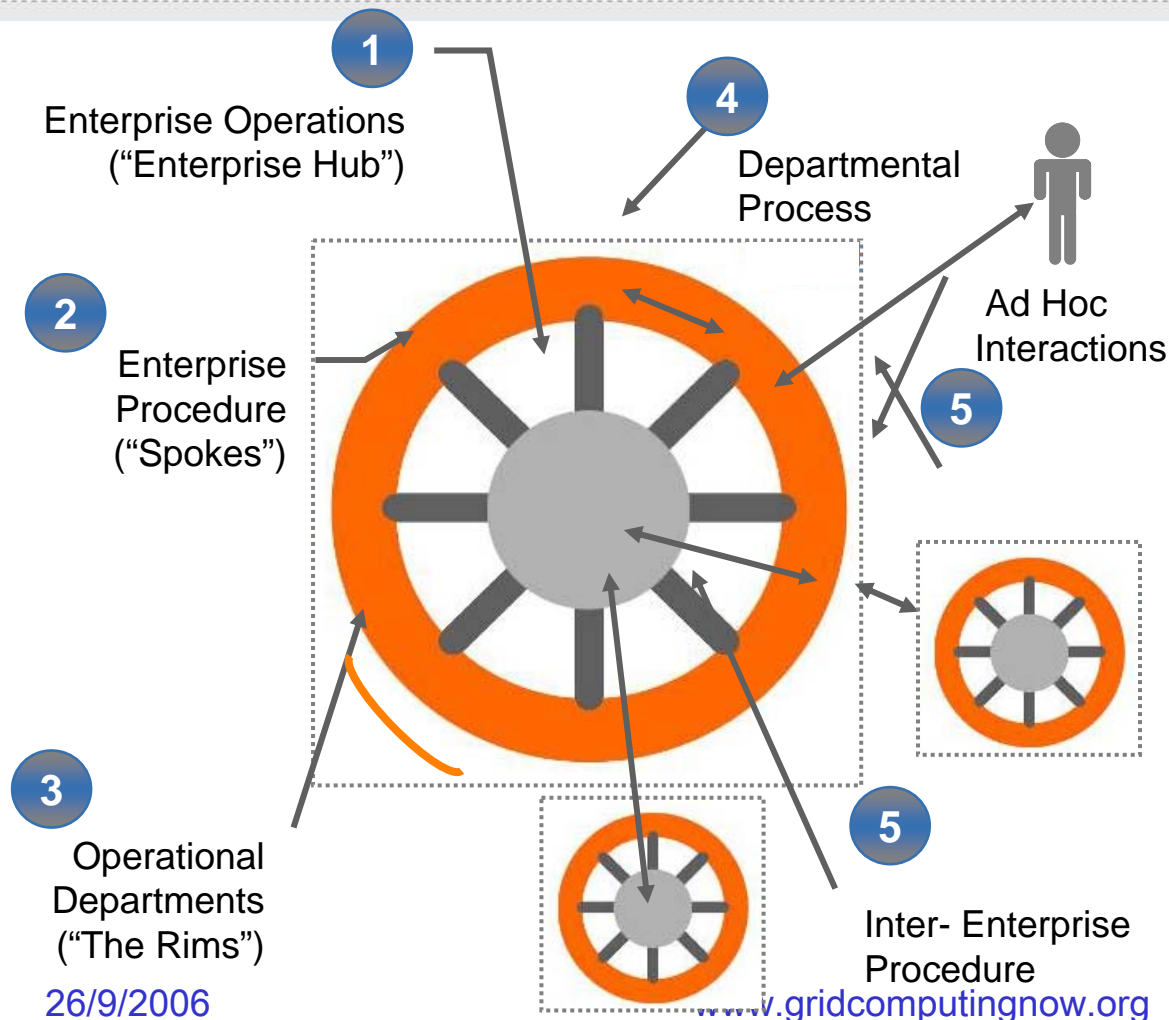

- Extraction of business scenarios and processes from application landscape
- Clear focus on defined services, which are reusable through an assembly of services
- Internal and external users get better access to data in different systems

# Rethinking the role of IT in your enterprise

Knowledge Transfer Networks

A DTI business support solution

Delivered through the Technology Programme

## Understanding the Hubs and Spokes

- 1. Enterprise Operations:** The "Hub" of critical corporate data management and maintenance for CxO level use, auditors, etc...
- 2. Enterprise Procedures:** The "spokes" serve as vehicles for delivering data across the company, typically already exist via current ERP systems
- 3. Operational Departments:** The "rim" sees many new department specific processes defined by day-to-day activities
- 4. Departmental Process:** Essential to individual departments, they provide more value to business owners than to the Enterprise
- 5. Inter-Enterprise Procedures / Ad Hoc Interactions:** Additional processes developed to manage daily interactions/requirements

14

**The UK Government has invested heavily in Grid Computing through the eScience programme**

**The Grid Computing Now! KTN is designed to capitalise on this investment and developments in the market**

**We will be measured as successful if we can point to changes taking place in practice**

- Adoption of grid computing technologies**
- Large network of industrial enthusiasts**
- Inputs towards future government investments**
- Productivity/Business Improvements underway**
