BPEL: Orchestrating web services (part 2)

Thursday 28 September 2006 16:00 (20 minutes)

BPEL (Business Process Execution Language) is a standard promoted by most leading vendors for orchestrating discrete (web) services into end-to-end business processes. BPEL has built-in support for synchronous and asynchronous activities, XML manipulation, parallel processing, conditional branching, exception management, compensating transactions and non-structured events.

This presentation will explain BPEL using practical examples and demonstrations

Presenter: BRAND, Hugo (Oracle)

Session Classification: Mini User Forum
