Hi Everyone,

We would like to welcome onboard the CERN Linux Distro team (<http://cern.ch/linux>) to the CentOS Core SIG. Thomas Oulevey and Jaroslav 'Jarek' Polok are going to be bootstrapping the CentOS Community Buildsystem around Koji and helping run it going forward.

The

community buildsystem is going to be the central place for all source to binary builds used by all efforts other than CentOS Core (for now).

CERN
“Agile infrastructure” project

The screenshot shows a CentOS mailing list interface. At the top left is the CentOS logo with the text 'Mailing Lists'. Below it is a navigation bar with a left arrow, the title 'Welcoming CERN Linux Distro team', and a right arrow. Underneath the title are tabs for 'First Post', 'Replies', 'Stats', and a 'month' dropdown menu.

Now moved to <http://techblog.web.cern.ch>

Thursday, 21 May 2015

Junio, EL6 and RDO Community.

Since 2011, CERN selected OpenStack as a cloud platform. It was natural to choose RDO as our RPMs provider ; RDO is a community of people using and deploying OpenStack on Red Hat Enterprise Linux, Fedora and distributions derived from these (such as Scientific Linux CERN 6 which powers our hypervisors).

The community decided not to provide official upgrade path from Icehouse to Juno on el6 systems.
