Authentication and Authorisation Infrastructure Workshop

Wednesday 17 September 2025 13:30 (4 hours)

The AARC TREE project is organizing a workshop to engage with the eScience clusters to gather inputs to shape the Compendium of AARC Best practices and Recommendations deliverable.

During the workshop the AARC TREE team will report on the initial revision of the AARC Blueprint Architecture, its policy and interoperability framework as well as on the requirements collected by the AARC TREE team from the eScience community that drove the revision.

Feedback from the OSCARS community is solicited to understand their requirements, how they are met and what time of support they would like to receive from the AARC TREE.

Participants are welcome to provide input on strategies to address sustainability aspects for maintaining operational AAI solutions that align with the AARC BPA framework.

Session Classification: Authentication and Authorisation Infrastructure Workshop
