## XX International Workshop on Deep-Inelastic Scattering and Related Subjects

Contribution ID: 131 Type: not specified

## Dijet Production in QCD and N=4 SYM

Wednesday 28 March 2012 10:30 (20 minutes)

Perturbative N=4 SYM computations for dijet production within the BFKL regime are shown to approach closely QCD predictions for suitable observables sensitive to the Möbius invariance of Regge limit. This similarity is strengthened by an appropriate choice of renormalization scale.
