Rucio Meets Open Data: Native Support and Tagging

Tuesday 4 November 2025 11:00 (20 minutes)

We are extending Rucio with native support for open data to better serve interdisciplinary research and sharing and re-use of results. The current approaches to open data require costly data duplication to comply with FAIR principles. The work we have been doing since the last workshop is to integrate open data support natively into Rucio. In this session, we will present the development progress and showcase how users can start tagging and managing open data seamlessly in Rucio. This work is funded by OSCARS.
