

ELENA (Concluding remarks)

20 different Institutions, 88 people participating at the first ELENA construction meeting, Great!

- From the experiment presentations ELENA is really desired and useful
- ELENA opens the door to new experiments which are on the process to send proposals to CERN committee
- The new experimental area (as an option for the moment) becomes reality and to increase the space is necessary

ELENA (Concluding remarks)

- It is proposed to move the kicker platform outside the AD ring in a new building for at least 3 reasons (need to be study):
 1. to reduce the noise at 100 keV for the experiments
 2. it is recommended by the kicker experts
 3. by the physics community to increase the space for new experiments

ELENA (Concluding remarks)

- Elena has been approved with the fast extraction only (design) but we don't have to close the door to new future development
- The planning presented shows several advantages: once ELENA is commissioned physics could take place with ELENA and then the transfer lines to the present experiments could be modified
- It is proposed to keep the high energy extraction possibilities from AD in DEM zone

ELENA (Concluding remarks)

- Resources (money and manpower) have been identified and external institutions have made concrete propositions (approved and applied for)
- We have to work on the TDR and really fix the parameters and to discuss and negotiate with different institutions the help

ELENA (Concluding remarks)

- Next iteration in about 6 months from now
- Thanks to everybody for coming to help us for the ELENA construction, we really appreciate
- Special thanks to Pavel, Tommy, Christian, Gerard, Horst, Walter and Nadine for the very efficient organization of the meeting

THANK YOU VERY MUCH
