

# AF operations

*Martin Vala and Arsen Hayrapetyan*

January 25, 2012

- ALICE Analysis Facility (AAF) is a proof-enabled cluster with aggregated storage and ALICE software installed.
- AAFs are used for prompt analysis of pp and Pb-Pb data, as well as for prompt reconstruction of limited number of events per run by Offline shifters (CERN Analysis Facility, CAF).
- AAFs are not substitution of grid sites – large-scale user analysis should be run on grid.

# AAF structure?

## Master

- 32 or more GB RAM
- 4 or 8 core machine
- 50 GB disk space for software (depends on size of packages)

## Worker

- 3-4 GB RAM per core
- N disks (no RAID) for data
  - CAF (3 and 4 disk per node)
  - SKAF (2 disk per node)
  - KIAF (8 disk per node)
- 50 GB disk space for software (depends on size of packages)

# List of AAF

Name	Online	Status	Cluster			ROOT	Aggregated disk space			AF xrootd		xrootd
			Proof master	Workers	Users	Version	Total	Free	Used	Running	Latest	Version
1. CAF	Yes	Stable	alice-caf.cern.ch	116	0	v5-30-03-1	162.1 TB	10.89 TB	151.2 TB	1.0.43	1.0.43	20100510-1509_dbg
2. KJAF	Yes	Stable	kiaf.sdfarm.kr	96	0	v5-30-03-1	171.9 TB	119.1 TB	52.8 TB	1.0.43	1.0.43	20100510-1509_dbg
3. LAF	Yes			-	-		9.413 TB	7.271 TB	2.142 TB			20100510-1509_dbg
4. SAF	Yes	Maintenance sin...	nansafmaster.in2p3.fr	48	0	v5-30-03-1	12.07 TB	4.581 TB	7.491 TB	1.0.43	1.0.43	20100510-1509_dbg
5. SKAF	Yes	Stable	skaf.saske.sk	60	0	v5-30-03-1	53.72 TB	2.751 TB	50.97 TB	1.0.43	1.0.43	20100510-1509_dbg
<b>Total</b>				<b>320</b>	<b>0</b>		<b>409.2 TB</b>	<b>144.6 TB</b>	<b>264.6 TB</b>			

- Register master's host certificate in alien (as proof user)
- Visit and register your PROOF cluster at <http://aaf.cern.ch>
- Generate config file aaf.cf at <http://aaf.cern.ch>
- Follow installation <http://aaf.cern.ch/node/47>
- Report bugs at our savannah -  
<https://savannah.cern.ch/projects/aaf>
- Or test NEW PEAC-AAF installation (alpha version - DEMO)

## PEAC - Proof Enabled Analysis Cluster

- experiment independent
- common PROOF setup using PoD
- fast and easy installation
- software management and software distribution to workers
- data management using xrootd
- data staging using afdsmgrd
- cluster monitoring by monalisa
- PROOF setting is based on AAF setup

PEAC is implemented to use all plugins from PoD

- For STATIC proof cluster - PoD ssh plugin is used
  - without password ssh
  - xproofd will be started (when ROOT is present on master and workers)
  - worker automatic restart
  - executing commands on workers (PEAC is using pssh for now)

# With PEAC you will have for free.

- Software management
  - PEAC sw management
  - for ALICE - AliEn
- Data management
  - xrootd SE on worker machines (use local disks to cache data)
  - AliEn SE elements (process remotely)
- Data staging using afdsmgrd (Dario Berzano)
  - data are cached to xrootd on workers
  - data are cached on external storage

- ALICE plugin for PEAC will use same proof settings as current AAF
- NEW - multiuser option - only ONE (proof) user needs to be on workers
- NO 'root' access to machines is needed
- for ALICE same security as AAF (certificate + alien ldap)
- multiple proof config files can be joined

- compile + binary is distributed to workes (both will be shown in DEMO)
- \*.pbuild is script used to installation instruction
- binary can be copied from xrd Global sw redirector
- xrscp (extreme copy) is going to be used for file distribution
- Different VO\_\*
  - VO\_PEAC
  - VO\_ALICE
  - VO\_ALICE\_DEV
  - VO\_MY
- Each VO will own rsync server of \*.pbuids

# Example of pbuild

- pbuild - Proof build script
  - configure, make, make install

## structure of pbuild

```
function PEAC_download() {  
    ...  
}  
  
function PEAC_configure() {  
    ...  
}  
  
function PEAC_make() {  
    ...  
}
```

- Xrootd
  - redirector + datasever model
  - Xrootd's frm scripts will do staging.
  - xrd-dm plugin will copy files from different sources
    - ALICE - AliEn (root://rdr//alice/....)
    - ATLAS - ??? (root://rdr//atlas/....)
    - Other - ??? (root://rdr//my\_experiment/....)

- XROOTD setup for more then 64 data servers
- Port xrddm to FRM scripts
- Documentation (First version at <http://mon1.saske.sk/peac/doc>)
- Monitor PEAC specific (version, packages installed, ...)

- You can now test PEAC alpha version
  - tested on SL5, fedora, ubuntu and gentoo
  - DEMO

# DEMO
