L. SERIN
S. STAVREV

The AIDA project is organizing an industry-academia matching event on Position Sensitive Solid-State devices and related technologies.

This event will review forefront developments in particle and photon sensing and provide key application areas. It will facilitate information exchange between academia and industry, fostering more R&D collaborations.

AIDA (Advanced European Infrastructures for Detectors at Accelerators) is co-funded by the European Commission within Framework Programme 7 Capacities, Grant Agreement 262025.
