Agile Infrastructure Monitoring

Tuesday 24 April 2012 11:40 (25 minutes)

The Agile Infrastructure (AI) project will establish a flexible and dynamic management of CERN computer centre resources. From the infrastructure monitoring perspective the AI project is working towards a common monitoring architecture to allow accessing and correlating information about all computer centre resources. This new monitoring solution will simplify the sharing of monitoring data and promote complex monitoring analysis tasks. This talk will motivate the need for such architecture, explain the architecture building blocks, and present the selected technologies.

Author: Mr RODRIGUES DE SOUSA ANDRADE, Pedro Manuel (CERN)

Presenter: Mr RODRIGUES DE SOUSA ANDRADE, Pedro Manuel (CERN)

Session Classification: IT Infrastructure

Track Classification: IT Infrastructure and Services
