PDSF at NERSC – Site Report

Tuesday 24 April 2012 10:10 (10 minutes)

PDSF is a commodity Linux cluster at NERSC which has been in
continuous operation since 1996. This talk will provide a
status update on the PDSF system and summarize recent changes at
the NERSC Center. Highlighted PDSF changes include the
conversion to xCAT-managed netboot node images, the ongoing
deployment of Scientific Linux 6, and the introduction of XRootD
for STAR.
