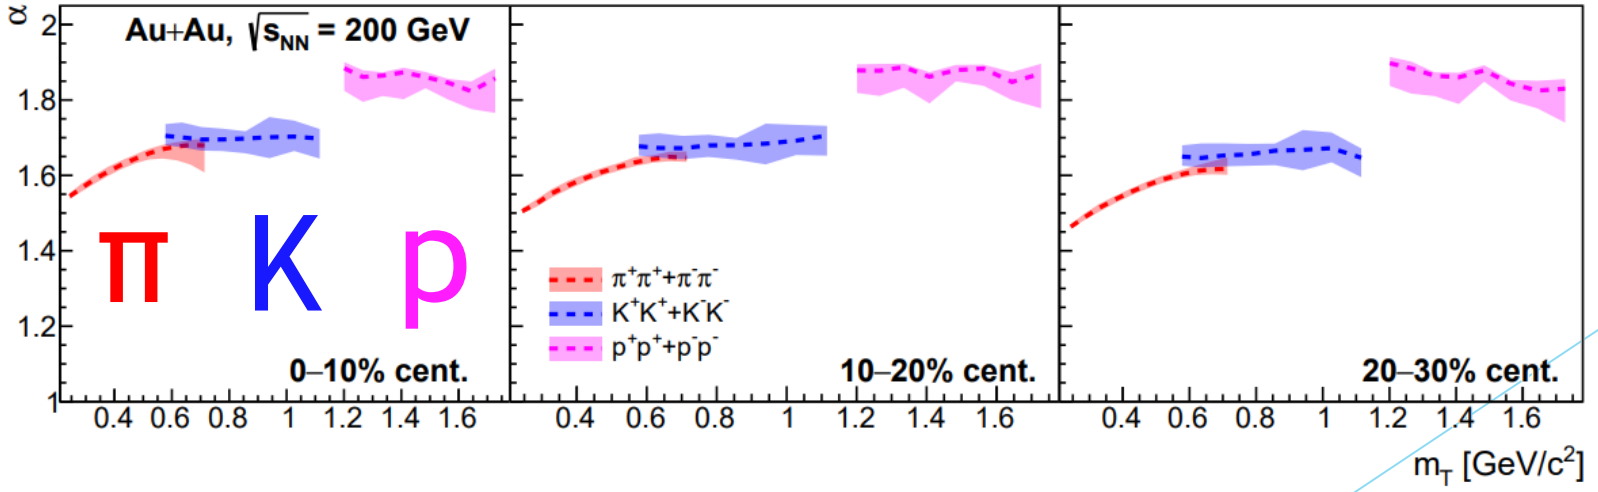
Particle-species dependence of the two-particle source function in EPOS

25th ZIMÁNYI SCHOOL WINTER WORKSHOP ON HEAVY ION PHYSICS
December 1-5, 2025, Budapest

László Kovács
Eötvös Loránd University, Budapest
In collaboration with Dániel Kincses, Máté Csanád, Emese Árpási

- Two particle source function investigated in EPOS3
- Shape of the source function?
- Lévy-stable distribution: generalization of Gaussian
- Shown in experiments: the shape deviates from Gaussian ($\alpha < 2$)
- One possible reason: elastic scattering dominated Lévy walk


Lévy-shape α depends on cross section → Measure the shape for π, K, p
