

Priorities – Rob Quick

- Top Priority - Disruptive Change

- Information Services – BDII
- Stability, Information Validation, Information Propagation

- Notes on Today's Slides

- OSG/GOCDDB - OIM Information is available, a common format and access point should be easy to agree upon.
- Monitoring – SAM/RSV may not be the future. GlideIn validations are already repeating some VO SAM/RSV tests. Jobs validating (and alerting Ops if validation fails) before the make the decision to run may be more effective than existing Monitoring Strategies.
