Application Software Management

Middleware Configuration, Deployment and Distribution

UK Sites Priorities

Ian Collier, RAL Tier 1

Application Software Management

- Improved vastly in last year
- CVMFs & Alice torrent distribution removed most headaches for sites.
- Continue move to CVMFs, monitor
- Otherwise little to do

Middleware Configuration, Deployment and Distribution

1. Improve (provide!) documentation
2. Simplify configuration - greater consistency across components
3. Any efforts to support specific configuration management systems must not detract from 1 & 2
