## Will ALICE be running during the HL-LHC era?

*Thursday 9 February 2012 17:00 (10 minutes)*

We will present the perspectives for ion running in the HL-LHC era.

In particular, ALICE is preparing a significant upgrade of its rate capabilities and further extending its particle identification potential. This paves the way for heavy ion physics at unprecedented luminosities, which are expected in the HL-LHC era with the heaviest ions. The potential interest of data-taking during high luminosity proton runs for ATLAS and CMS will also be commented.
