Plans for ions in the injector complex

Thursday 9 February 2012 19:30 (20 minutes)

The heavy ion beams required during the HL-LHC era will imply significant modifications to the existing injector chain. We review the various options, highlighting the importance of an early definition of the future needs and keeping in mind the compatibility with the rest of the future CERN physics programme.

Presenter: MANGLUNKI, Django (CERN)

Session Classification: S08 -LHC-related projects and studies part (I)
