Review of 2011 LHC run from the experiments perspective

Monday 6 February 2012 08:35 (10 minutes)

The 2011 LHC run is reviewed from the experiments perspective. The achievements directly related to physics production are summarized. This includes high luminosity p-p and Pb-Pb running, special activities (such as intermediate energy p-p physics, 90 m optics, luminosity calibrations) and other experiments (for example satellite-main bunch collisions in IP2, 25 ns stable beams tests, etc.).

Presenter: FERRO-LUZZI, Massimiliano (CERN)

Session Classification: S01 - Lessons from 2011
