

Safety Structure and Safety Organization

Wednesday, 7 March 2012 09:15 (30 minutes)

What news from SAPOCO on new version of Safety Policy? Recent changes in Safety Organization; Confirmation of Director A&T as “Chef d’Installation”; single BFSP transformed into three CSAP’s, one per complex: LHC, SPS, PS. What impact does this have on Safety for different facilities (machines and experimental areas)? What are the existing and recognised roles and functions for both Occupational Safety (Sécurité) and Operational Safety (Sûreté). Are there more changes coming? Are there other changes that would be necessary and yet are not foreseen?

Presenter: PEDERSEN, John (CERN)

Session Classification: Safety & RP Issues
