FCC Higgs Introduction

Giacomo Cacciapaglia (LPTHE), Marco Delmastro (LAPP), Ramona Gröber (Padova), Ang Li (BNL), Andrew Mehta (Liverpool)

July 7, 2026

Meeting and Conference

- **Monthly meeting**: First Tuesday 2PM CERN time.
  - Additional meeting depends on demands
- **FCC-ee Higgs Analyses Tracker** [Link]
  - Please fill you finished or/and on-going work here
- **Dedicated workshop**: preparing
- ICHEP, Natal, Brazil, July 30 – August 5, https://indico.cern.ch/event/1522800/
  - Higgs mass, width and absolute ZH boson cross section at FCC-ee
  - Higgs boson couplings to hadrons, and invisible and rare decays at FCC-ee
  - Measuring the electron Yukawa in a s-channel e+e- -> Higgs run at FCC-ee
  - Precision Higgs physics at FCC-hh
- Higgs 2026, Louvain-La-Neuve, Belgium, Oct. 26 – 30, https://indico.cern.ch/event/1668640/
  - Call for nomination for plenary talk: Higgs physics at future e^+e^- colliders after the 2026 European Strategy
  - Submit your abstract for your own analysis and let us know, Deadline **July 10th**

Publications

- Think about publishing your work. Before submitting your work to Arxiv/journal, please **submit a note on CDS and ask for an internal review** (especially if work based on common samples and analysis framework). Instructions here.

Backup

Who are we?

- The conveners:
  - Giacomo Cacciapaglia (LPTHE) cacciapa@lpthe.jussieu.fr
  - Marco Delmastro (LAPP) Marco.Delmastro@cern.ch
  - Ramona Gröber (Padova) ramona.groeber@pd.infn.it
  - Ang Li (BNL) ang.l@cern.ch
  - Andrew Mehta (Liverpool) Andrew.Mehta@cern.ch

- Feel free to contact us individually or through fcc-ped-physicsgroup-higgs-admin@cern.ch

- General Mailing list: FCC-PED-PhysicsGroup-Higgs@cern.ch
  - Join the list if not done yet

Plans

- **Top priorities**
  - Full simulation studies in benchmark H decay channels
    - Since true FullSim probably not available in a while, begin by implementing mixed simulation or refined parametric version of performances likely to mostly impact Higgs channels (e.g. JES/JER, particle flow, leptons calibration, flavor tagging)
    - Possible benchmark channels:
      - H→invisible
      - Higgs mass
      - Higgs couplings to quarks
  - H-pole measurement (e.g. e Yukawa)

- **Other (uncovered?) measurements to brainstorm:**
  - Trilinear Higgs coupling
    - Interplay with EWPO for Higgs
    - EW correction to VBF production for HHH coupling?Non-SM decays of the Higgs:
    - H->bs, H-> ALPs, …
    - Collaboration with the flavor and BSM group
  - Quantum Information/tomography
  - Off-shell Higgs effects at WW and/or tt threshold
  - How model-independent is the Higgs width measurement?
    - Any models that can not be covered (multiple Higgs?)

- **Connection with detector/performance groups**
  - Path toward FullSim, intermediate spurs with mixed simulation
  - Any need for performance recalibration at the ZH threshold? (e.g., charm tagging efficiency for H→cc measurements)

FCC-ee Higgs Analyses Tracker (add yours!)
