

Technical support and activities in Oxford

Monday, 17 September 2012 15:20 (40 minutes)

Oxford's Department of Physics champions the notion that Physics Research needs strong technical support. To this end it has around 40 staff providing Mechanical, Photo Fabrication and Electronics Engineering and related manufacturing support using a wide range of modern tools.

In recent years these services have been designated as cost recovered services allowing them to provide support for other local University Departments as well as other organisations.

Due to their unique capability to produce components that cannot be easily sourced elsewhere they have been successful in bringing in work from academic institutes from around the world.

This talk will give you a flavour of what Oxford can do for you.

Presenter: FOPMA, Johan (University of Oxford)

Session Classification: Opening 1
