The Large Pixel Detector for the European XFEL

Wednesday 10 September 2014 09:30 (20 minutes)

We present an overview of the Large Pixel Detector (LPD), results from beam tests and the next steps and plans for future developments. LPD is a large area megapixel scale detector primarily designed for the European XFEL (XFEL.EU). At XFEL.EU the LPD detector must be capable of operating with a frame rate of 4.5MHz and record images with a dynamic range of 1:100,000 photons whilst maintaining low noise. The LPD system has a large in pixel memory depth of 512 images that can be selected with a flexible veto system. Data is then transferred off the detector head in between x-ray pulses with an accompanying high rate data acquisition system (~10 GB/s). The system is assembled from custom silicon sensors and ASICs as well as a programmable data acquisition cards and supporting electronics and mechanics. A prototype LPD system has been constructed and tested on a range of beam lines including the free electron laser, LCLS. The highlights of these tests will be reported.

Primary author: HART, Matthew (STFC - Rutherford Appleton Lab. (GB))

Co-authors: Mr KOCH, Andreas (XFEL.EU); COUGHLAN, John (STFC - Rutherford Appleton Lab. (GB)); Mr FRENCH, Marcus Julian (STFC - Rutherford Appleton Lab. (GB)); Mr KUSTER, Markus (XFEL.EU); SELLER, Paul (RAL); Mr BURGE, Stephen (STFC - Rutherford Appleton Lab. (GB)); NICHOLLS, Tim (STFC - Rutherford Appleton Lab. (GB))

Presenter: HART, Matthew (STFC - Rutherford Appleton Lab. (GB))

Session Classification: Session 8: Detectors for Synchrotrons and FELS

Track Classification: Detectors for FELS and other advanced Light Sources
