## **Computing : A contribution from the French community**

Since several years, IN2P3 and IRFU are on the cutting edge of the technology in the area of the processing of very large data volume. Pushed by the particle physics needs, both IN2P3 and IRFU have deployed tools and have acquired computing resources that are useful to all the scientific domains, especially astroparticles, nuclear and hadronic physics and multidisciplinary research. Our community is now facing several challenges in the computing field which will have deep implications.
