

News from SUSY Group approval

Philip Bechtle · Till Nattermann

University of Bonn
Editorial Board meeting

February 8, 2012

Main concerns

- scalings: why $\omega_{T_t} < 1$?
- scalings: why $\omega_{T_f} \neq \omega_{W_f}$?
- scalings: check with $Z \rightarrow \tau\tau$
- vetos: veto 2. muon, 2. tau and electron: remove the vetos
- veto signal region events in CR (will make no difference)
- Minutes: <https://cdsweb.cern.ch/record/1397918>
- need to be done to get approved

Further procedure

- Contact the EB again and discuss results on the mentioned points
- if EB agrees on results: schedule new SUSY group approval
- plan: include the required modifications to analysis (remove the lep vetoes)
- depending on how results change, consider all mentioned points
