Search for SM Higgs decaying to ZZ to four leptons at CMS

Saturday 7 July 2012 11:00 (15 minutes)

Results are presented on the search for the standard model Higgs boson decaying into two Z bosons, with each boson decaying into a pair of charged leptons, either muons, electrons or taus. The full data sample of 4.7 fb⁻¹ of pp collisions collected in 2011 at a CM energy of 7 TeV with the CMS experiment have been analyzed, as well as a significant fraction of the 2012 luminosity delivered so far at the new energy of 8 TeV.
