## **ATLAS measurements of W/Z+gamma, searches for new physics and constraints on triple-gauge couplings**

*Friday, July 6, 2012 10:15 AM (15 minutes)*

Differential and total visible cross sections for W+photon and Z+photon production are measured and compared to the predictions of the standard model. Limits on anomalous triple-gauge couples are derived, and the data are used to search for physics beyond the standard model.
