Outline

- Introduction to a compact solution
- Results with 5 Gb/s VCSEL array driver
- Summary

Use of VCSEL Arrays in ATLAS

- Widely used in off-detector data transmission
- First on-detector implementation in pixel detector
 - ◆ experience has been positive
 - VCSELs used are humidity sensitive but they are installed in very low humidity location
 - modern VCSELs are humidity tolerant
 - ⇒ will use arrays for next pixel detector upgrade (IBL)

New Parallel Optical Engine

- Improved design for new pixel layer of ATLAS
 - ◆ use 12-channel VCSEL and PIN arrays
 - ⇒ 36 optical channels

New 12-Channel VCSEL Driver

- New ASIC designed using 130 nm CMOS
- Incorporate improvements taking advantage of experience from 1st generation parallel optical engine:
 - ◆ redundancy to bypass a broken VCSEL
 - special thanks to FE-I4 group (Roberto Beccherle et al.) for command decoder circuit
 - ◆ power-on reset in case of communication failure:
 - no signal steering
 - 10 mA modulation current (on current)
 - 1 mA bias current (off current)
- Will only operate at 160 Mb/s for new pixel layer but designed ASIC to operate at much higher speed (5 Gb/s) to gain experience in designing high-speed parallel driver

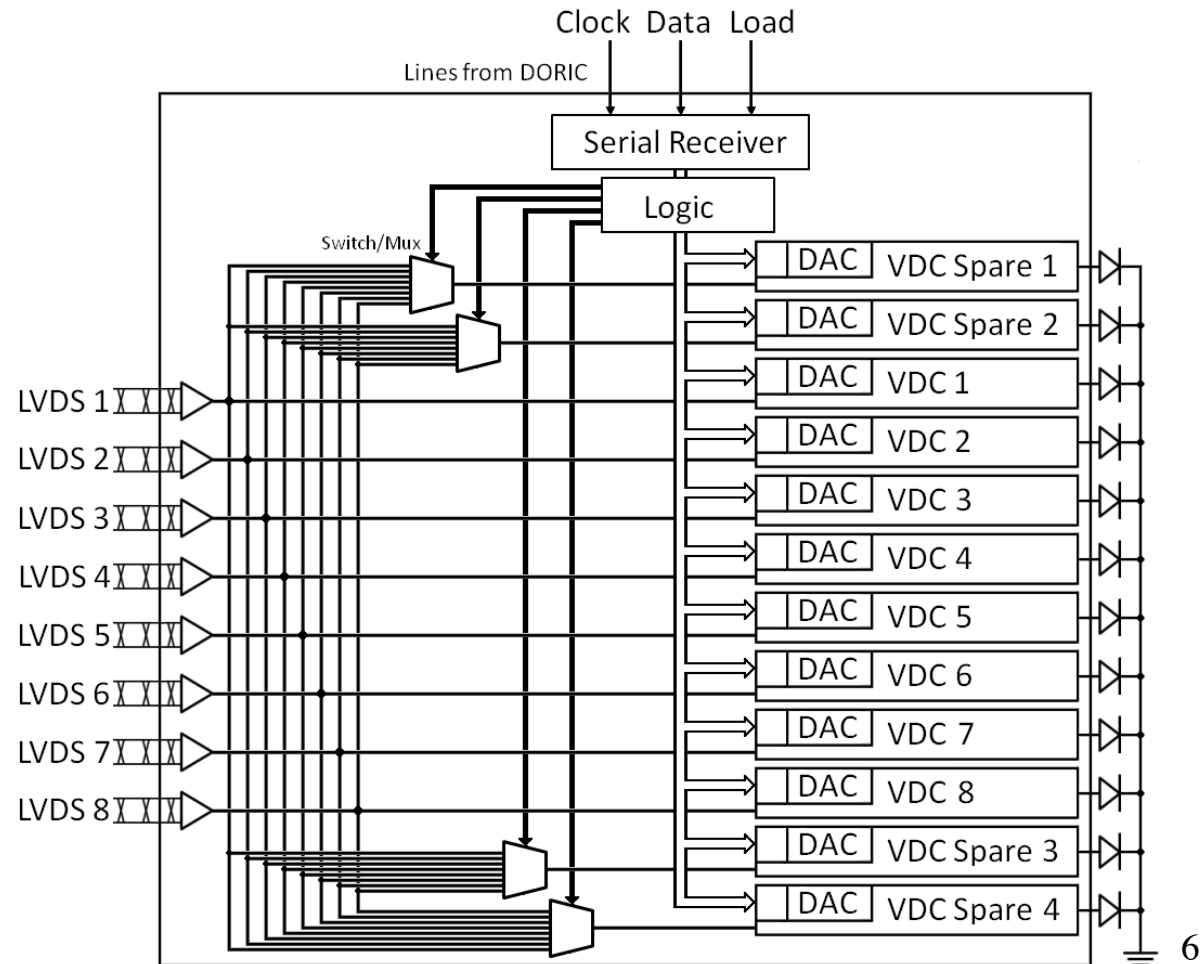

New VCSEL Array Driver

- Only inner 8 channels connected to new pixel modules
 - ◆ future driver should reserve only one channel for redundancy

4.5 mm

High-Speed Test Configuration

10 Gb/s ULM
VCSEL array

VCSEL
array driver

MPO connector

Optical Eye Diagram

- Difficult to judge eye diagram with 4.5 GHz optical probe...

SFP+ as Optical Probe

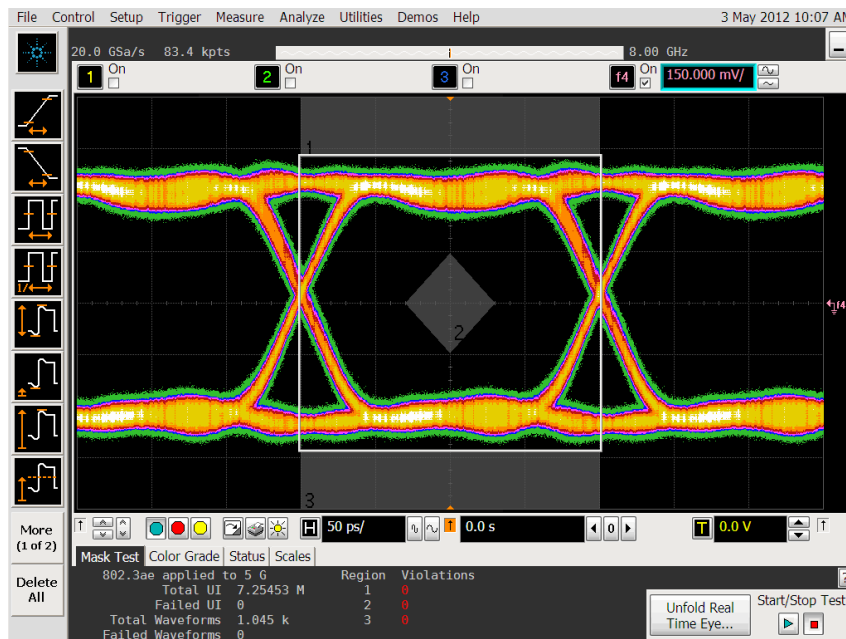

SFP+ Loopback vs VCSEL Driver

10 Gb/s SFP+ transceiver @ 5 Gb/s
with optical loopback

VCSEL driver @ 5 Gb/s
after 10 Gb/s SFP+ receiver

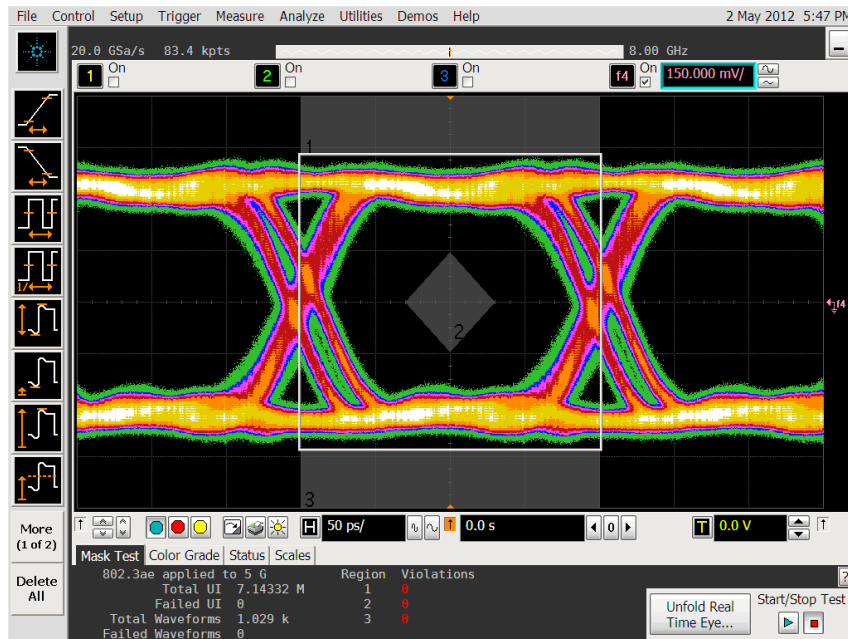

Eye with One/All Channels Active

One channel active

All channels active

- all channels work @ 5 Gb/s with bit error rate $< 5 \times 10^{-13}$ for all channels active
- jitter increases with all channels active but still passes the mask test

Effect of Steering on Eye

VCSEL spare 1

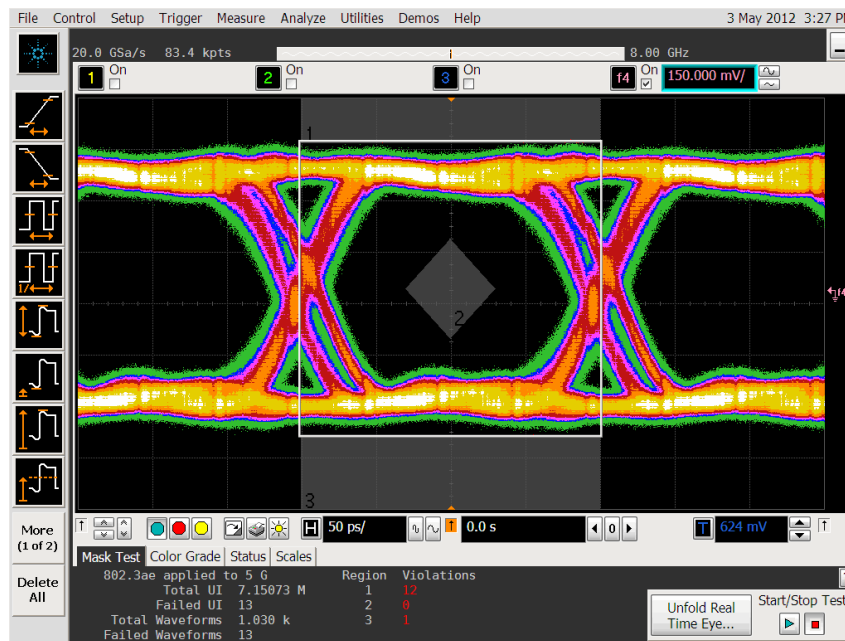

Receiving LVDS signal
from channel 8, steering
to VCSEL spare 1

LVDS in channel 8
ICHEP2012

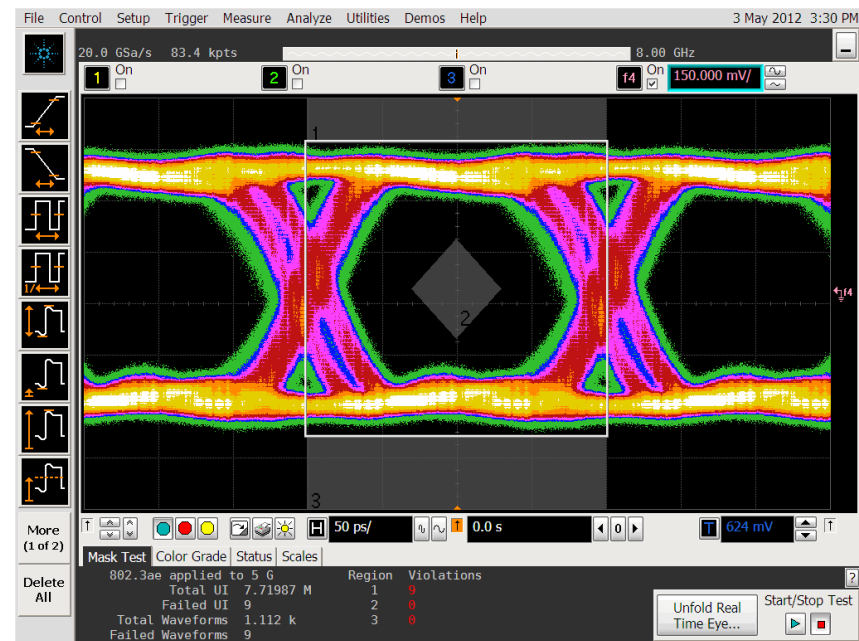

Effect of Steering on Eye

Spare 1 output with other channels off

Spare 1 output with all channels active

- steered channel still passes the mask test
- ◆ jitter increases with all channels active

Jitter Measurement

- measured on the spare channel with signal rerouted across die
 - ◆ should be the worse case scenario
- all other channels active

Total Jitter @ BER 10^{-12}	65 ps
Random Jitter	3.1 ps
Total DJ	36.8 ps

Radiation Hardness

- 10 Gb/s VCSEL arrays have been proven to be radiation hard to tens of Mrad
 - ◆ send signal on ~ 1 m micro co-ax cables to less radiation and more serviceable location
- Radiation hardness of VCSEL array driver will be verified in the summer

Future Plan

- 10 Gb/s transmission needed for ATLAS inner pixel layer and LAr readout upgrades
 - ◆ joint ATLAS/CMS proposal funded via US DOE generic R&D program
- Layout array VCSEL driver/PIN receiver using GBLD and GBTIA with redundancy for possible pixel applications

Summary

- VCSEL array offers compact solution to data transmission
- 5 Gb/s VCSEL array driver successfully prototyped
- Currently designing 10 Gb/s VCSEL array driver
