Search for new physics in events with two photons, many jets, and low missing transverse energy

Saturday 7 July 2012 12:00 (15 minutes)

Many supersymmetric and exotic models of new physics predict high-multiplicity events with leptons or electroweak gauge bosons and low missing transverse energy in the final state. We present results of a search for new physics at CMS in events with two photons and many hadronic jets with no requirement for large missing transverse energy.
