

# Top quark properties (except for FB asymmetry, polarization, spin correlations, W helicity, mass)

**Christian Schwanenberger**

**University of Manchester**

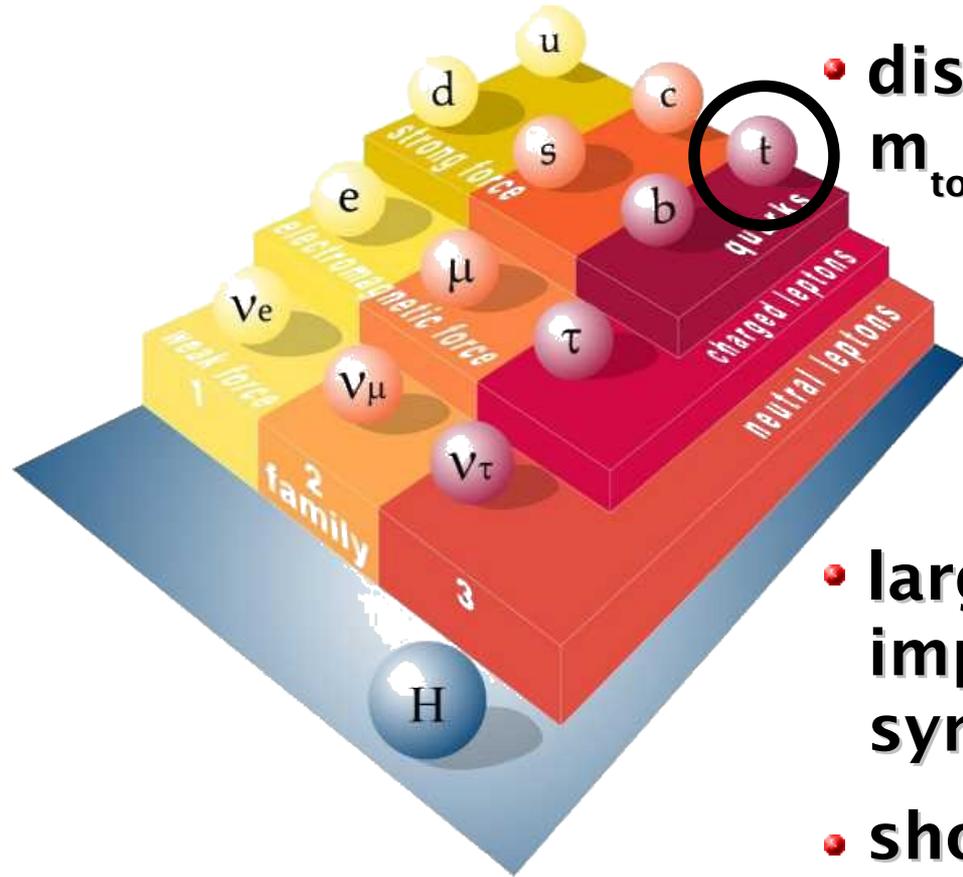

**on behalf of**

**36<sup>th</sup> International Conference on High-Energy Physics  
Melbourne  
05/07/2012**

# The Top Quark

- needed as isospin partner of bottom quark
- discovered in 1995 by CDF and DØ:  $m_{\text{top}} \sim \text{gold atom}$

**couplings**

- large coupling to Higgs boson  $\sim 1$ : important role in electroweak symmetry breaking?
- short lifetime:  $\tau \sim 5 \cdot 10^{-25} \text{ s} \ll \Lambda_{\text{QCD}}^{-1}$ : decays before fragmenting  $\rightarrow$  observe “naked” quark

$$\Gamma_t = 1/\tau$$

**Is the top quark the particle as predicted by the SM?**

# Top quark couplings

# Measurement of Branching Fractions

## Standard Model:

$$R = \frac{B(t \rightarrow Wb)}{B(t \rightarrow Wq)}$$

$$V_{CKM} = \begin{pmatrix} V_{ud} & V_{us} & V_{ub} \\ V_{cd} & V_{cs} & V_{cb} \\ V_{td} & V_{ts} & V_{tb} \end{pmatrix}$$

$$R_{SM} = \frac{|V_{tb}|^2}{|V_{tb}|^2 + |V_{ts}|^2 + |V_{td}|^2} = |V_{tb}|^2 \approx 1$$

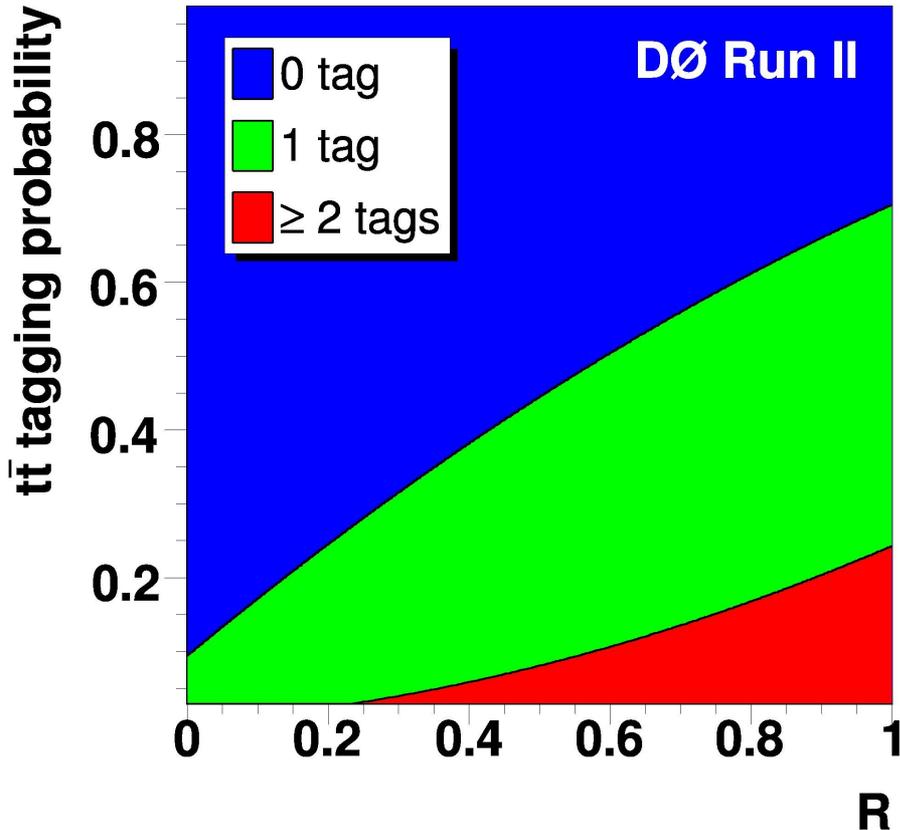

unitarity of CKM matrix

beyond SM:

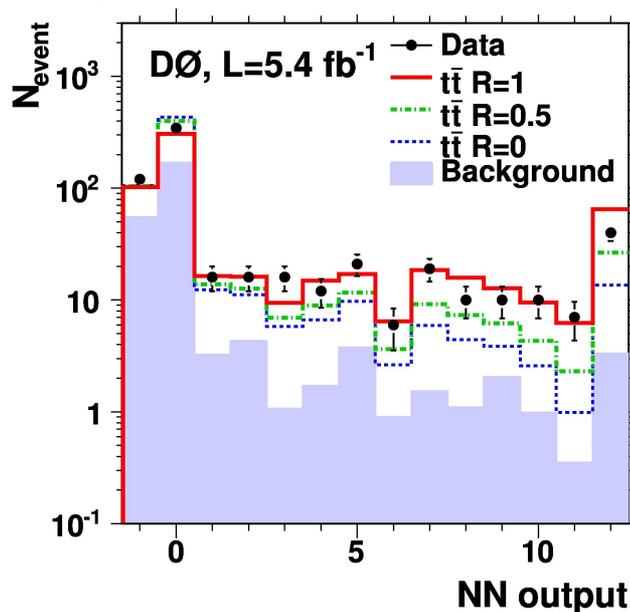

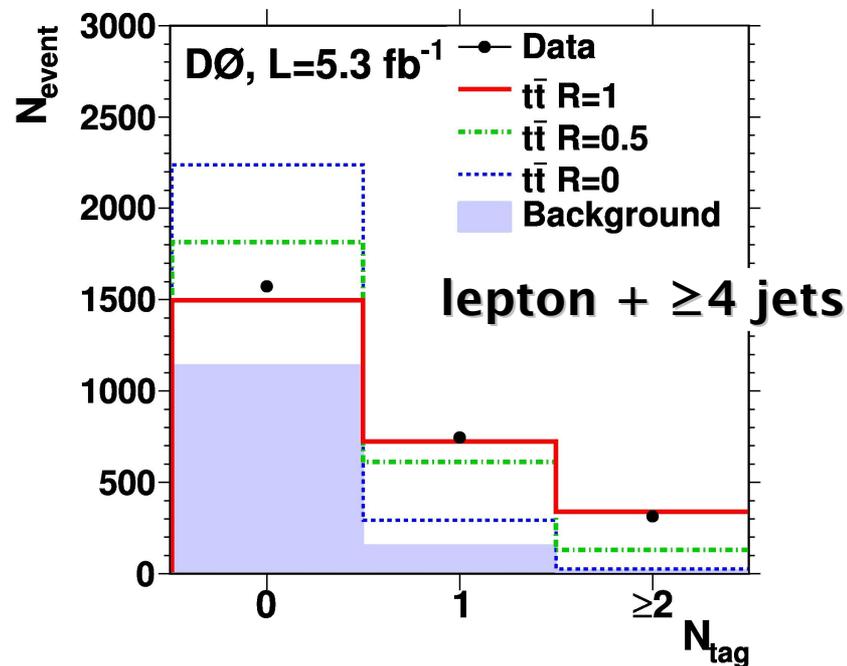

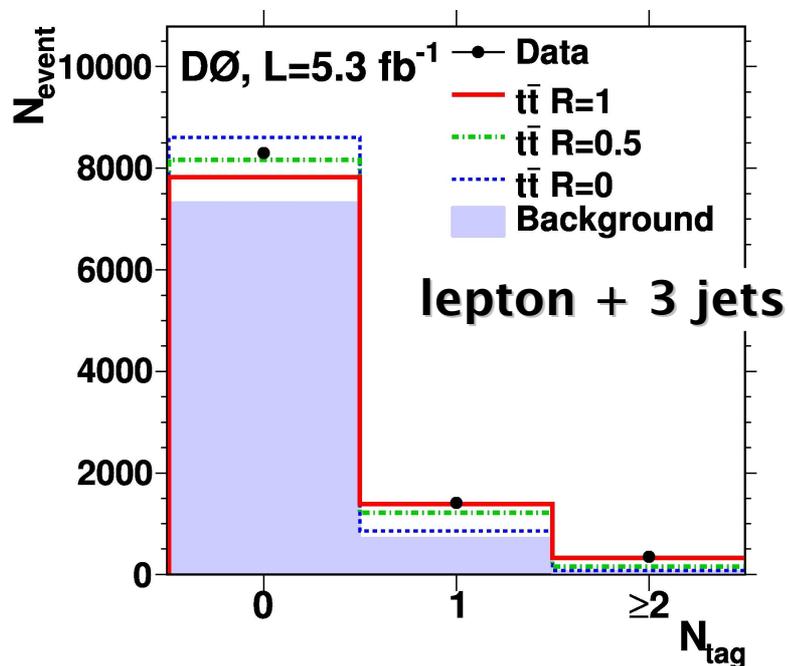

$$R \neq 1$$

e.g. decay into 4<sup>th</sup> generation quark:  $R < 1$   
sensitive to b disappearance

R changes fractions of b-tagged jets:

# Measurement of Branching Fractions

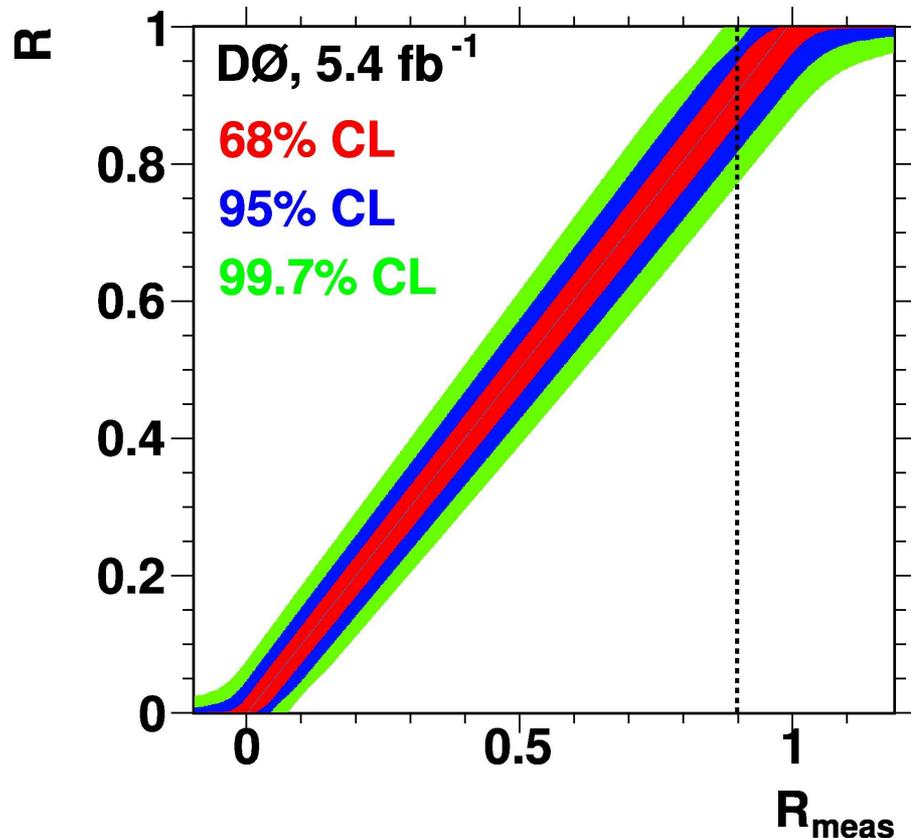

**topological information  
and b-tagging**

# Simultaneous Measurement of $\sigma$ and $R$

Maximize total Likelihood function simultaneously for branching ratio  $R$  and top pair production cross section

Phys. Rev. Lett. 107, 121802 (2011)

$$R = 0.90 \pm 0.04 \text{ (stat+syst)}$$

using unitarity of CKM matrix:

$$0.90 < |V_{tb}| < 0.99 \text{ @ 95\% C.L.}$$

$$\sigma_{t\bar{t}} = 7.74^{+0.67}_{-0.57} \text{ (stat+syst) pb}$$

**⇒ agrees with SM  
within 2.5 $\sigma$**

# Outline

Top quark decay branching ratios

**Width and lifetime**

Top quark couplings (FCNC)

Conclusions

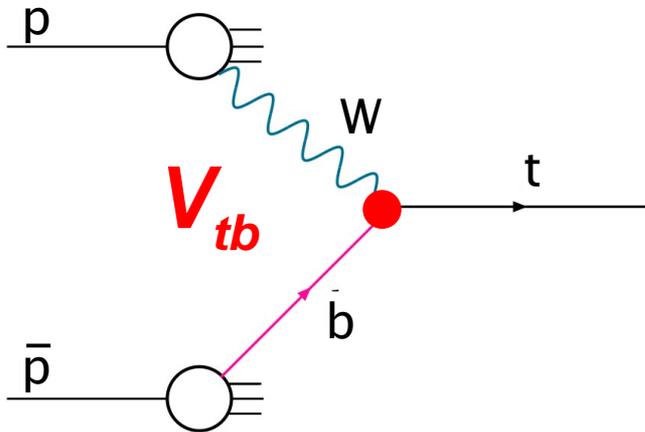

# Top Decay Width

- indirect determination (direct extraction not sensitive enough)

## t-channel cross section:

$$\sigma(\text{t-channel}) = 2.26 \pm 0.12 \text{ pb}$$

approximate NNNLO,  $m_t = 172.5 \text{ GeV}$

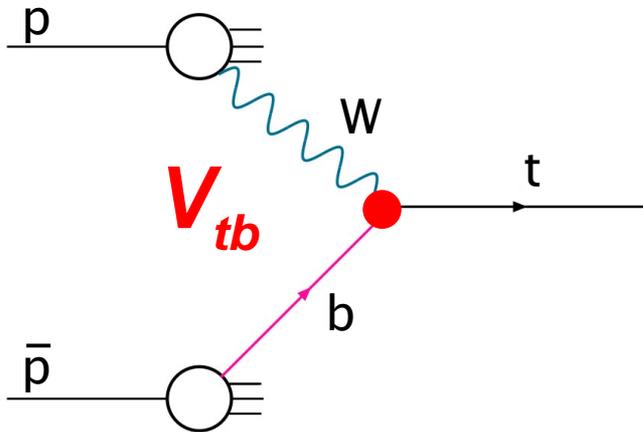

# Top Decay Width

- indirect determination (direct extraction not sensitive enough)

## t-channel cross section:

$$\sigma(\text{t-channel}) = 2.26 \pm 0.12 \text{ pb}$$

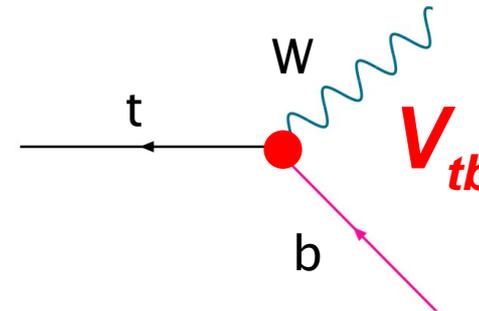

approximate NNNLO,  $m_t = 172.5 \text{ GeV}$

## partial decay width:

$$\Gamma(\text{t} \rightarrow \text{Wb}) = 1.33 \text{ GeV}$$

NLO,  $m_t = 172.5 \text{ GeV}$

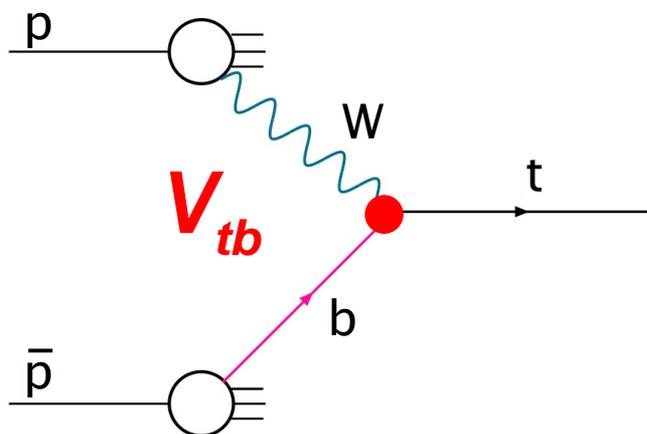

# Top Decay Width

- indirect determination (direct extraction not sensitive enough)

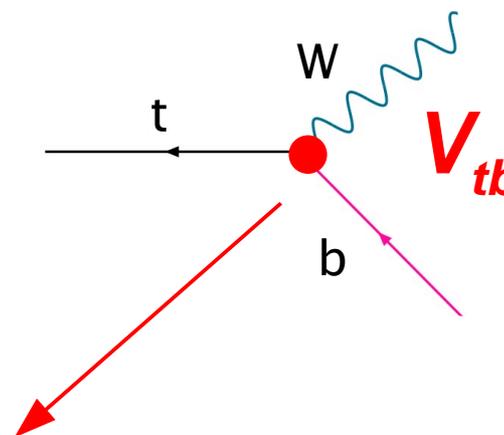

## t-channel cross section:

$\sigma(\text{t-channel}) = 2.26 \pm 0.12 \text{ pb}$   
 approximate NNNLO,  $m_t = 172.5 \text{ GeV}$

## partial decay width:

$\Gamma(t \rightarrow Wb) = 1.33 \text{ GeV}$   
 NLO,  $m_t = 172.5 \text{ GeV}$

$$\Gamma_t = \frac{\Gamma(t \rightarrow Wb)}{\mathcal{B}(t \rightarrow Wb)}$$

←  $t\bar{t}$  production

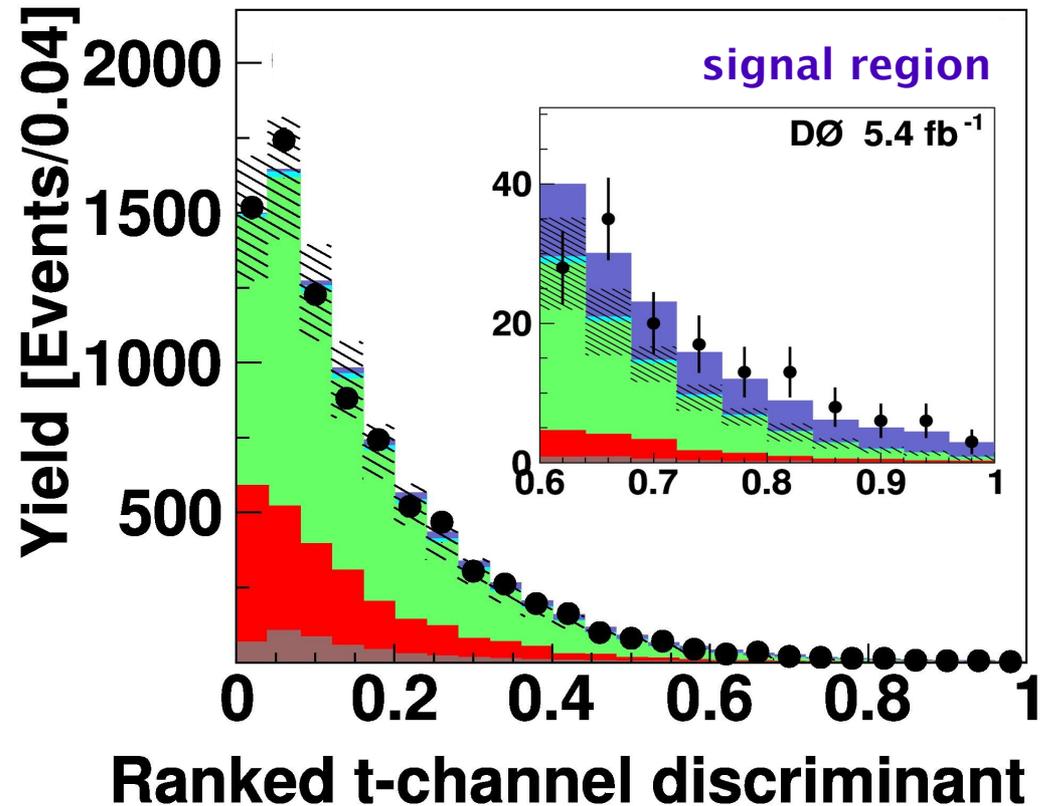

- combine both measurements
- assume that coupling in top production and decay is the same

# Observation of t-Channel Production

- remove s/t channel constraint which could be changed by new physics
- train multivariate analysis for t-channel
- measure t-channel and s-channel simultaneously

Phys. Lett. B 705, 313 (2011)

**observation with  $5.5\sigma$**

$$\sigma(p\bar{p} \rightarrow tqb + X) = 2.90 \pm 0.59 \text{ pb}$$

$\sigma(\text{t-channel}) = 2.26 \pm 0.12 \text{ pb}$   
 approximate NNNLO,  $m_t = 172.5 \text{ GeV}$

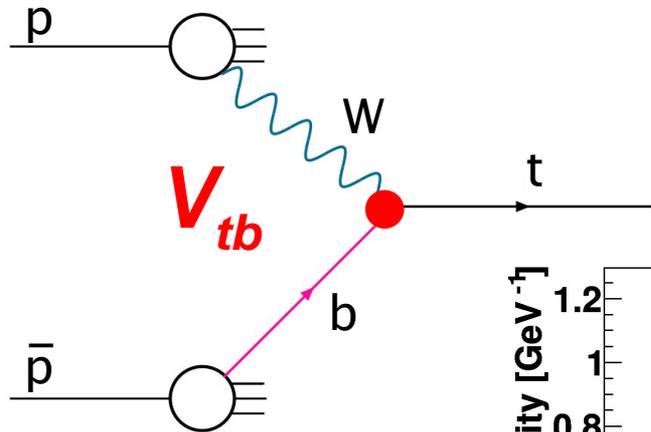

$m_t = 172.5 \text{ GeV}$

# Top Decay Width

## t-channel cross section:

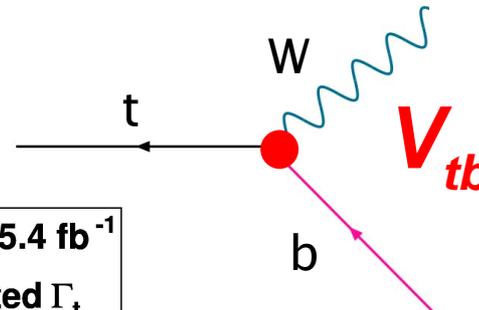

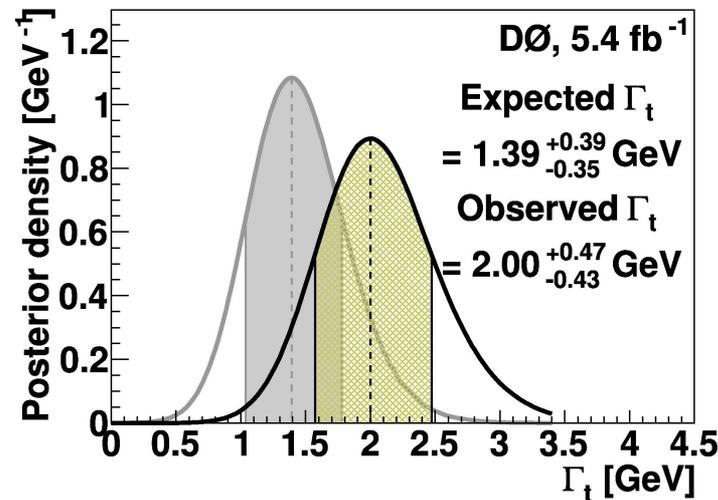

$$\sigma(pp \rightarrow tqb + X) = 2.90 \pm 0.59 \text{ pb}$$

$$m_t = 172.5 \text{ GeV}$$

## partial decay width:

$$R = 0.90 \pm 0.04 \text{ (stat+syst)}$$

Phys. Rev. D84 012008 (2011)

$$\Gamma_t = 2.00^{+0.47}_{-0.43} \text{ GeV}$$

$$\tau_t = (3.29^{+0.90}_{-0.63}) \times 10^{-25} \text{ s}$$

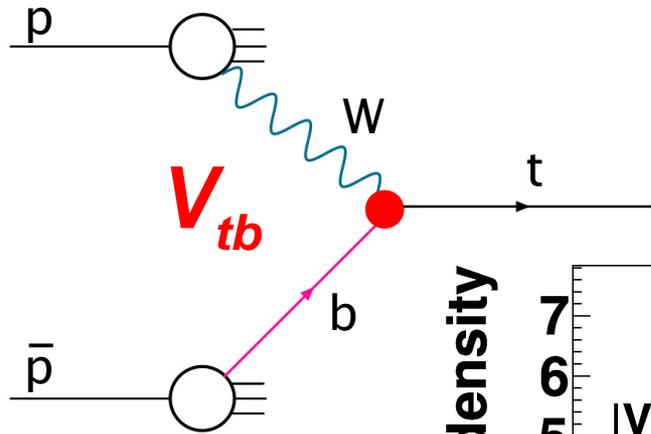

$\Rightarrow$  **most precise determination**

# Top Decay Width

## t-channel cross section:

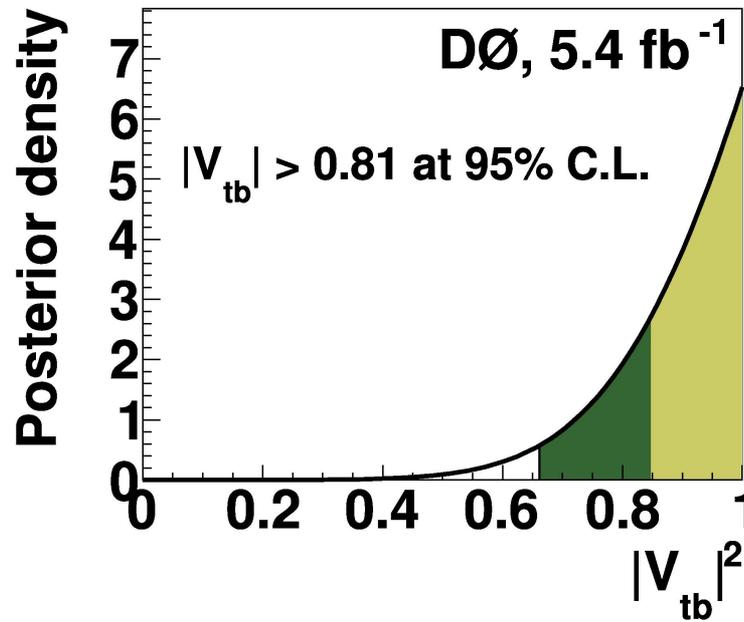

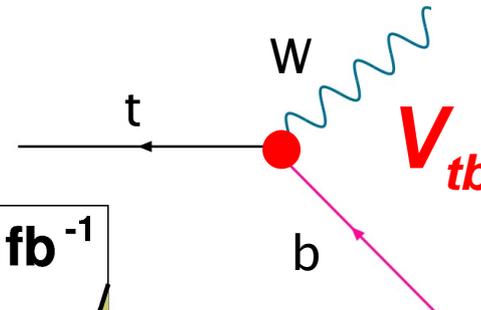

$$\sigma(pp \rightarrow tqb + X) = 2.90 \pm 0.59 \text{ pb}$$

$$m_t = 172.5 \text{ GeV}$$

## partial decay width:

$$R = 0.90 \pm 0.04 \text{ (stat+syst)}$$

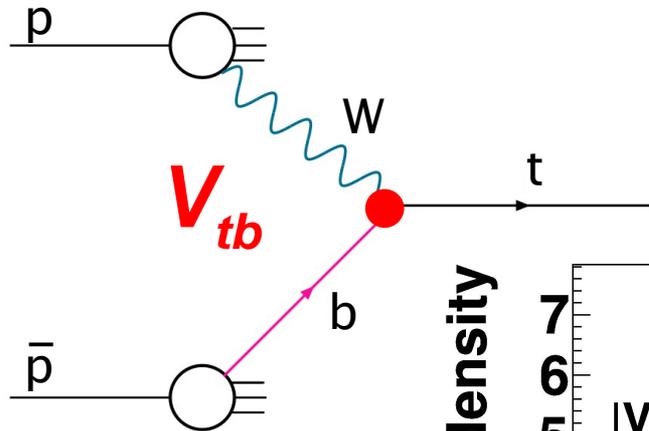

$$|V_{tb}| > 0.81 \text{ at the 95\% C.L.}$$

# Top Decay Width

## t-channel cross section:

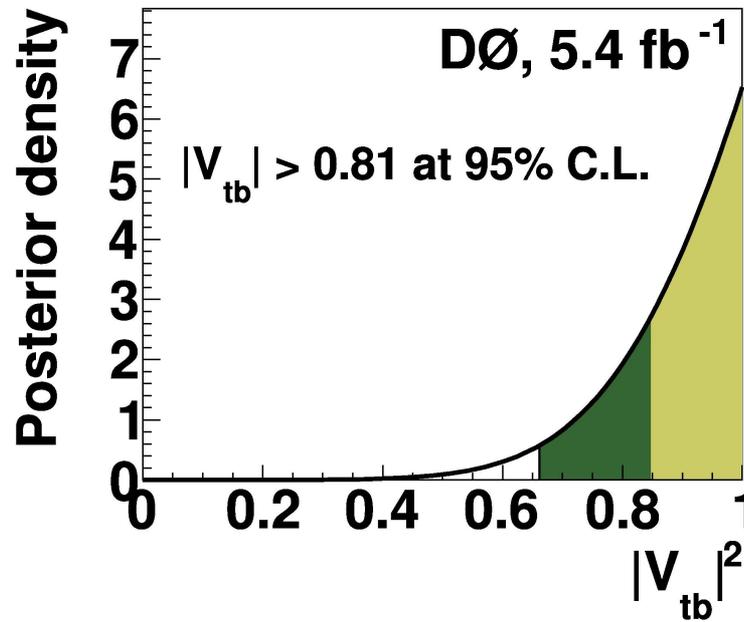

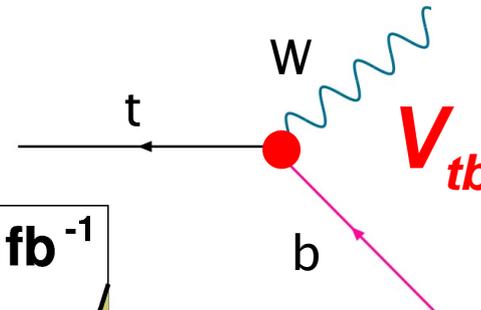

$$\sigma(pp \rightarrow tqb + X) = 2.90 \pm 0.59 \text{ pb}$$

$$m_t = 172.5 \text{ GeV}$$

## partial decay width:

$$R = 0.90 \pm 0.04 \text{ (stat+syst)}$$

## 4<sup>th</sup> generation b' quark:

$$m_{b'} > m_t - m_W$$

$$|V_{td}|, |V_{ts}| \ll 1$$

$$|V_{tb'}|^2 = 1 - |V_{tb}|^2$$

$$|V_{tb}| > 0.81 \text{ at the 95\% C.L.}$$

$$|V_{tb'}| < 0.59 \text{ at 95\% C.L.}$$
