Results on Bottom Baryons with the CDF II Detector

Thursday 5 July 2012 11:30 (15 minutes)

We present the latest results on the search for excited bottom baryon states Λ_{b1} in *proton-antiproton collisions with a center of mass energy of 1.96 TeV. Using a 10/fb data sample, we study the Λ_{b1} resonance states in the $\Lambda_{b0} \pi^+ \pi^-$ decay mode in events collected by the CDF II detector with a displaced vertex trigger.*
