

5th International workshop on heavy quark production in heavy-ion collisions

Contribution ID: 47

Type: **not specified**

The CBM heavy-quark program

Thursday, 15 November 2012 12:30 (30 minutes)

The Compressed Baryonic Matter (CBM) experiment at FAIR is designed to explore the QCD phase diagram in the region of high baryon densities and moderate temperatures. The key CBM observables include particles containing hidden charm – J/ψ and Υ' , open charm – D^0 , D^+ , D^* and L_c , low-mass vector mesons decaying into leptons and multi-strange hyperons. Particularly demanding is the measurement of open charm particles with very low multiplicities, which is based on the real time selection of displaced vertices with an accuracy of about $50\text{ }\mu\text{m}$. In the talk we discuss the problems of the detection of heavy-quark particles in fixed target experiments with relativistic heavy ion collisions.

Presenter: VASSILIEV, Iouri (GSI)

Session Classification: Open charm
