Restart and maintenance of the B-train measurements for the PS Complex and the SPS

Thursday, 19 January 2006 08:30 (15 minutes)

The responsibility of the Btrain measuring equipment and analog electronics will be taken over by AT-MTM from the accelerator cold check-out in 2006. The transfer of knowledge from AB-PO to AT-MTM has already taken place with the successful commissioning of the LEIR Btrain. The talk will address the issues related to the maintenance of all B-train systems. The interface with the associated real time software level will also be discussed. The planning for the start-up of the B-train systems for 2006 will be presented.

Presenter: CORNUET, Didier

Session Classification: Session 3: Start-up with Beam (from the CCC)
