## **AD and AD experimental areas: equipment tests and startup with beam**

*Thursday, 19 January 2006 10:45 (15 minutes)*

After 18 months of shutdown, the AD and its experimental areas will be re-started in essentially the same configuration as in 2004. Before starting up with beam, a comprehensive test of all AD equipment as well as a cold check-out will be required. This talk will deal with issues concerning the startup planning such as access, beam requirements, status of AD sub-systems and AD modifications. Emphasis will be given to specific problems related to startup and operation from the CCC vs. Local Control Room..

**Presenter:** ERIKSSON, Tommy

**Session Classification:** Session 3: Start-up with Beam (from the CCC)
