HEPSYSMAN

Pete Gronbech
HEPSYSMAN Chairman

May 2012

- Interoperation testing, e.g. WebDAV between DPM and dCache (but without duplicating work already done)

- CEPH evaluation (and Sam insists that we pronounce it "keph")

- Use of AFS, eg AFS on Lustre? NGS had an evaluation from a few years ago

- Managing POSIX type access

- Optimising metadata databases

- Sharing Pupppet experiences

- Stress testing script/hammercloud-in-a-box

- T1 disk storage evaluations - share the results, get the T2s involved

- Excellent meeting with lots of very useful talks
- Puppet experience increasing in the group
- MySQL talks very useful
- The agenda was a bit overloaded.
- However uploading talks to indico allowed quick transitions.
- The way we run HEPSPEC06 at sites must be consistent

- Next meeting topics??
- Volunteer site to host late Oct/Nov 2012
