LHCb: Monitoring the DIRAC Distribution System

[Nandakumar, R](#); [Seco Miguez, M](#); [Santinelli, R](#)

9 Oct 2006 . - 29 p

Abstract: DIRAC is the LHCb gateway to any computing grid infrastructure (currently supporting WLCG) and is intended to reliably run large data mining activities. The DIRAC system consists of various services (which wait to be contacted to perform actions) and agents (which carry out periodic activities) to direct jobs as required. An important part of ensuring the reliability of the infrastructure is the monitoring and logging of these DIRAC distributed systems. The

Progress in Kaon Physics on the Lattice

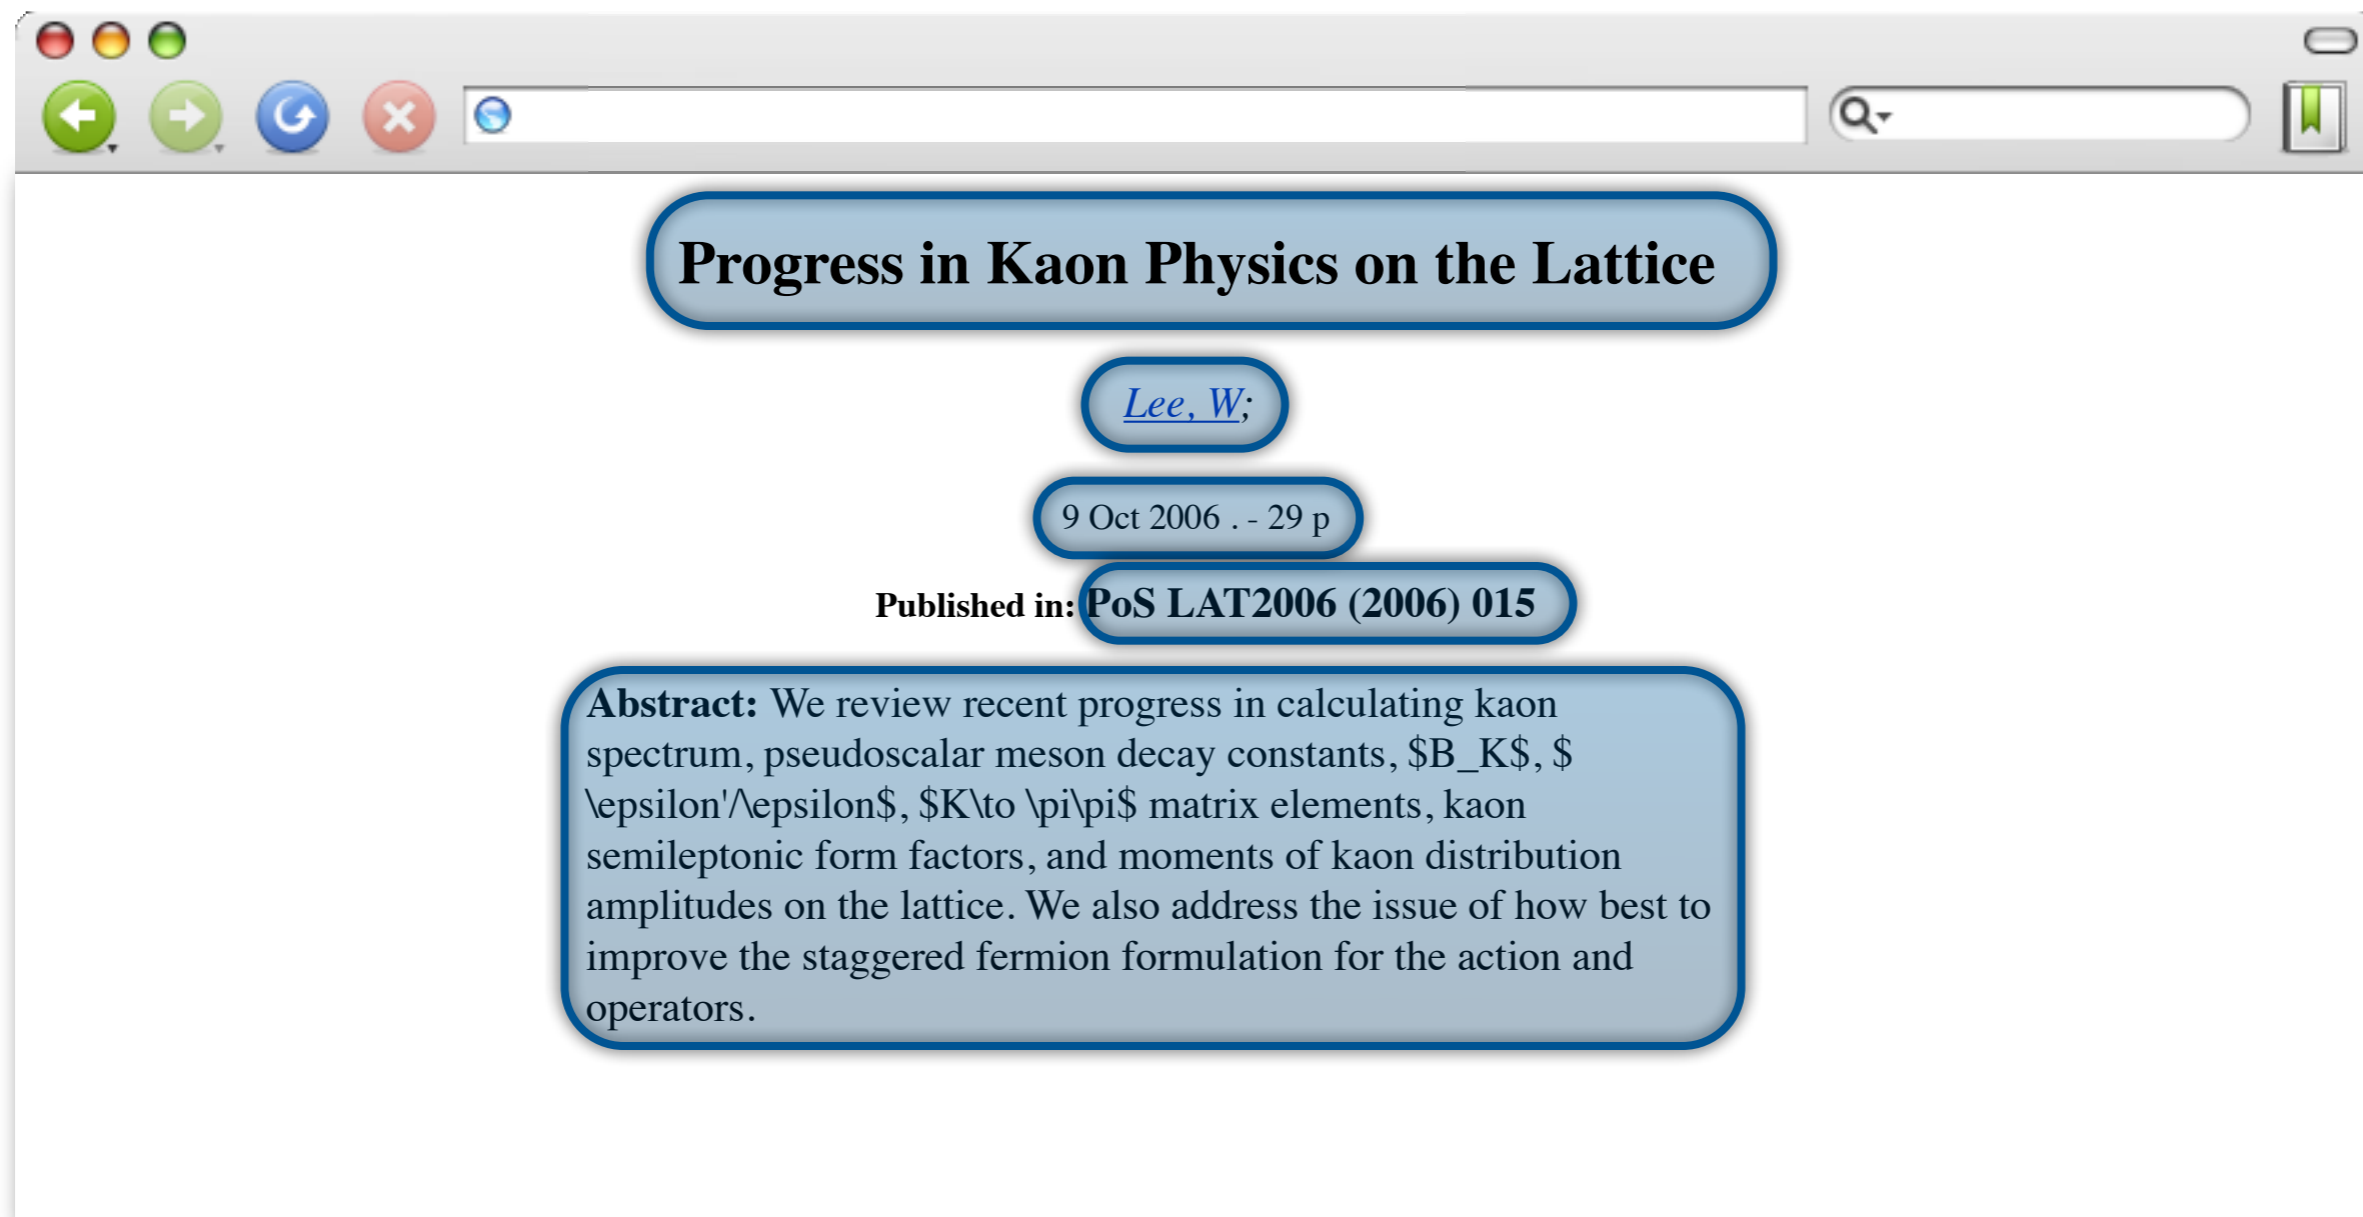

[Lee, W;](#)

9 Oct 2006 . - 29 p

Published in: PoS LAT2006 (2006) 015

Abstract: We review recent progress in calculating kaon spectrum, pseudoscalar meson decay constants, B_K , ϵ'/ϵ , $K \rightarrow \pi\pi$ matrix elements, kaon semileptonic form factors, and moments of kaon distribution amplitudes on the lattice. We also address the issue of how best to improve the staggered fermion formulation for the action and operators.

```
  <xsl:value-of select="fn:eval_bibformat(..../  
    controlfield[@tag=001], '&lt;BFE_SERVER_INFO  
    var=&quot;reurl&quot;)' )" />
```

```
</link>
```

```
<pubDate>
```

```
  <xsl:value-of select="fn:creation_date(..../  
    controlfield[@tag=001], '%a, %d %b %Y %H:%M:%S GMT' )" />
```

```
</pubDate>
```

- XSL is supported too, in addition to combo format template + format element
- XSL in Invenio can also call BibFormat elements:

```
<link>
```

```
  <xsl:value-of select="fn:eval_bibformat(..../  
    controlfield[@tag=001], '&lt;t;BFE_SERVER_INFO  
    var=&quot;recurl&quot;;>'" />
```

```
</link>
```

```
<pubDate>
```

```
  <xsl:value-of select="fn:creation_date(..../  
    controlfield[@tag=001], '%a, %d %b %Y %H:%M:%S GMT' )" />
```

```
</pubDate>
```

- BibConvert can also make use of XSLT

```
def format_element(bfo, max_length):  
    """  
    Element description  
    @param max_length: maximum length  
    """  
  
    title = bfo.field("245__a", escape=1)  
    title = title[:int(max_length)]  
  
    return title  
  
def escape_values(bfo):  
    return 0
```

Sample Format Element code

```
def format_element(bfo, max_length):  
    """  
    E  
    @  
    """  
    t  
    title = title[:int(max_length)]  
  
    return title  
  
def escape_values(bfo):  
    return 0
```

Recent API change: format \mapsto format_element

(New) escaping modes:

- 0 - no escaping
- 1 - escape all HTML characters
- 2 - remove unsafe HTML tags (Eg. keep `<lt;br />`)
- 3 - Mix of mode 1 and 2. If value of field starts with `<!-- HTML -->`, then use mode 2. Else use mode 1.
- 4 - Remove all HTML tags
- 5 - Same as 2, with more tags allowed (like `<lt;img>`)
- 6 - Same as 3, with more tags allowed (like `<lt;img>`)
- 7 - Mix of mode 0 and mode 1. If `field_value` starts with `<!-- HTML -->`, then use mode 0. Else use mode 1.
- 8. Same as mode 1, but also escape double-quotes
- 9. Same as mode 4, but also escape double-quotes

length) :

length

escape=1)
th)]

```
<bfe_title prefix="<b>" suffix="</b>"  
default="N/A" escape="0" max_length="40"
```

- `prefix`, `suffix`, `default` and `escape` are handled by BibFormat, not the element
- but the element can override `escape` to only escape necessary parts (but `escape` is usually not necessary to specify in template)

```

BibReformat

BibReformat

BibReformat

BibReformat

User

BibReformat must run periodically so that when MARCXML is modified, cache can be updated

```
$ bibreformat -o HB -s5m
```

(attached records cache)

bibreformat

MARCXML

Output formats

Templates

Elements

BibReformat

User

However bibreformat must be run "manually" on selected set of records when Output formats, templates or elements are updated.

(webcoll might need to be run, and Apache reloaded)

records
)

bibreformat

MARCXML

Output formats

Templates

Elements

Eventually bibreformat should be phased out, and format caches handled automatically by BibFormat (Lazy formatting, [ticket:985](#) and [ticket:972](#))

User

Preformatted records (cache)

BibFormat

or

MARCXML

Output formats

Templates

Elements

Forthcoming changes

- Lazy caching (bye bye bibrefformat)
- JSON Output format?
- HDM output format, for template-based addition to page meta header (with sample Google Scholar and OpenGraph markup)

|----|-----------------|--------------------------|------------|------|--------------|----|-----|---------|----------|----|-----|----|----|----|------------------------|----------------------|
| 2 | cern:experiment | CERN experimental papers | | CERN | reportnumber | a | a | (EIPPE) | division | r | a | | | | delete | edit |
| 3 | cern:theory | CERN theoretical papers | | CERN | reportnumber | a | a | TH | division | e | a | | | | delete | edit |

[Add new OAI set definition](#)

Organize records in "sets", as per OAI specifications

The screenshot shows a web browser window displaying the 'OAI Repository Admin Interface' for the 'ATLANTIS INSTITUTE OF FICTIVE SCIENCE'. The interface includes a navigation menu with 'Search', 'Submit', 'Personalize', 'Help', and 'Administration'. The main content area contains instructions on defining sets for OAI harvesting and a table of existing sets.

Home > Admin Area > OAI Repository Admin Interface

OAI Repository Admin Interface

Define below the sets to expose through the OAI harvesting protocol.
You will have to run the [oairepositoryupdater](#) utility to apply the settings you have defined here.

| id | setSpec | setName | collection | p1 | f1 | m1 | op1 | p2 | f2 | m2 | op2 | p3 | f3 | m3 | | |
|----|-----------------|--------------------------|------------|------|--------------|----|-----|----------|----------|----|-----|----|----|----|------------------------|----------------------|

 - `CFG_OAI_PROVENANCE_*`
 - `etc.`
- `CFG_OAI_ID_FIELD` and `CFG_OAI_SET_FIELD` must be in same datafield

BibExport

Periodically export metadata to some files, in some format

```
# Schedule job to create export files periodically  
$ /opt/invenio/bin/bibexport -sld -w sitemap
```

```
# Schedule job to create export files periodically
$ /opt/invenio/bin/bibexport -sld -w sitemap

# "job" are defined in .cfg files
$ less /opt/invenio/etc/bibexport/sitemap.cfg
  [export_job]
  export_method = sitemap
  collection1 = Articles
  collection2 = Preprints
  fulltext_status = restricted_picture
```

```
# Schedule job to create export files periodically
$ /opt/invenio/bin/bibexport -sld -w sitemap

# "job" are defined in .cfg files
$ less /opt/invenio/etc/bibexport/sitemap.cfg
[export_job]
export_method = sitemap
collection1 = Articles
collection2 = Preprints
fulltext_status = restricted_picture
```

Plugin-based: currently existing values for `export_method`:

- `sitemap`
- `googlescholar`
- `marcxml`

```
# Schedule job to create export files periodically
$ /opt/invenio/bin/bibexport -sld -w sitemap

# "job" are defined in .cfg files
$ less /opt/inve
  [export_job]
  export_method
  collection1 =
  collection2 =
  fulltext_stat
```

Each "export method" has different parameters. See sample .cfg files

sitemap → /opt/invenio/var/www/sitemap*

marcxml → /opt/invenio/var/www/export/marcxml

googlescholar → /opt/invenio/var/www/export/googlescholar

Plugin-based: current

- sitemap
- googlescholar
- marcxml

Write your own export method (and contribute back to Invenio 😊)

NEW Rio Macâe >>

Atlantis (Timaeus)

This great island lay over against the Pillars of Heracles, in extent greater than Libya and Asia put together, and was the passage to other islands and to a great ocean of which the Mediterranean sea was only the harbour; and within the Pillars the empire of Atlantis reached in Europe to Tyrrhenia and in Libya to Egypt. >>

Atlantis (Critias)

I have before remarked in speaking of the allotments of the gods, that they distributed the whole earth into portions differing in extent, and made for themselves temples and instituted sacrifices. And Poseidon, receiving for his lot the island of Atlantis, begat children by a mortal woman, and settled them in a part of the island, which I will describe. >>

A naturalist's voyage around the world

After having been twice driven back by heavy south-western gales, Her Majesty's ship "Beagle" a ten-gun brig, under the command of Captain Fitz Roy, R.N., sailed from Devonport on the 27th of December, 1831. The object of the expedition was to complete the survey of Patagonia and Tierra del Fuego, commenced under Captain King in 1826 to 1830--to survey the shores of Chile, Peru, and of some islands in the Pacific--and to carry a chain of chronometrical measurements round the World. >>

Latest additions:

- 2012-05-04 15:15 **Rio Macê / [Charles Darwin](#)**
April 14th, 1832.—Leaving Socôgo, we rode to another estate on the Rio Macê, which was the last patch of cultivated ground in that direction. The estate was two and a half miles long, and the owner had forgotten how many broad. Virgin Forest Only a very small piece had been cleared, yet almost every acre was capable of yielding all the various rich productions of a tropical land [...]

The Invisible Web

There is an invisible web beneath CERN that keeps the entire system going. It often goes unnoticed, yet is responsible for transmitting the vast amounts of data produced at CERN: the optical fibre network. >>

Delivering new physics at impressive speed

A word from the DG

The speed with which the heavy ion run at the LHC is delivering new physics is impressive not only for the insights it is bringing to the early Universe, but also for the clear demonstration it gives of the value of competition and complementarity between the experiments. >>

The Latest from the LHC: The success of the lead ion run continues

The success of the lead ion run continues, with the 2010 target of 121 nominal bunches achieved on Sunday, 14 November, just 10 days after the first ions were injected into the LHC. Operation under these conditions continued until Wednesday morning, when it was interrupted for a scheduled stop to replenish the lead ion source. By this time a peak luminosity of $2.8 \cdot 10^{25} \text{ cm}^{-2} \text{ s}^{-1}$ had been reached, and over $2 \mu\text{b}^{-1}$ had been delivered to the experiments. >>

Do atoms and anti-atoms obey the same laws of physics?

ALPHA physicists have recently succeeded in trapping anti-atoms for the first time. Being able to hold on to the simplest atoms of antimatter is an important step towards the collaboration's ultimate goal: precision spectroscopic comparison of hydrogen and antihydrogen. The question they are seeking to answer: do atoms and anti-atoms obey the same laws of physics? The Standard Model says that they must. >>
