

“Tell me that you have found no sign of

New Physics again, I dare you.

I double dare you. Tell me

one more goddamn **time!**”

Organizational issues:

- Contacts: EXP: everything ok
 - EXP: role within ATLAS/CMS?
 - TH: Ansgar still on holidays, not confirmed yet
 - TH: Main work by AD (tbc), MG, GW! SH “interested” ...
 - Our mandate:
 - general strategies
 - tools & codes
 - theoretical \oplus experimental issues
- ⇒ strong collaboration between TH and EXP required
(more than in other groups!)
- First step always: ATLAS/CMS publish and analyze their data
 - we may think at some point about the second step
(on public(!) data ...)

Physics issues:

- First issue: mass measurement!
 - model dependence?
 - $\gamma\gamma$ mode easy??
- Fit **to** a model? - Rather not!?
- Try to do as much as possible **model independent!**
- Fit ratios (model independent)
- Fit couplings with model assumption on Γ_{tot} ?
- Fit “effective” couplings rather than model input?
