

The enginframe Grid Portal

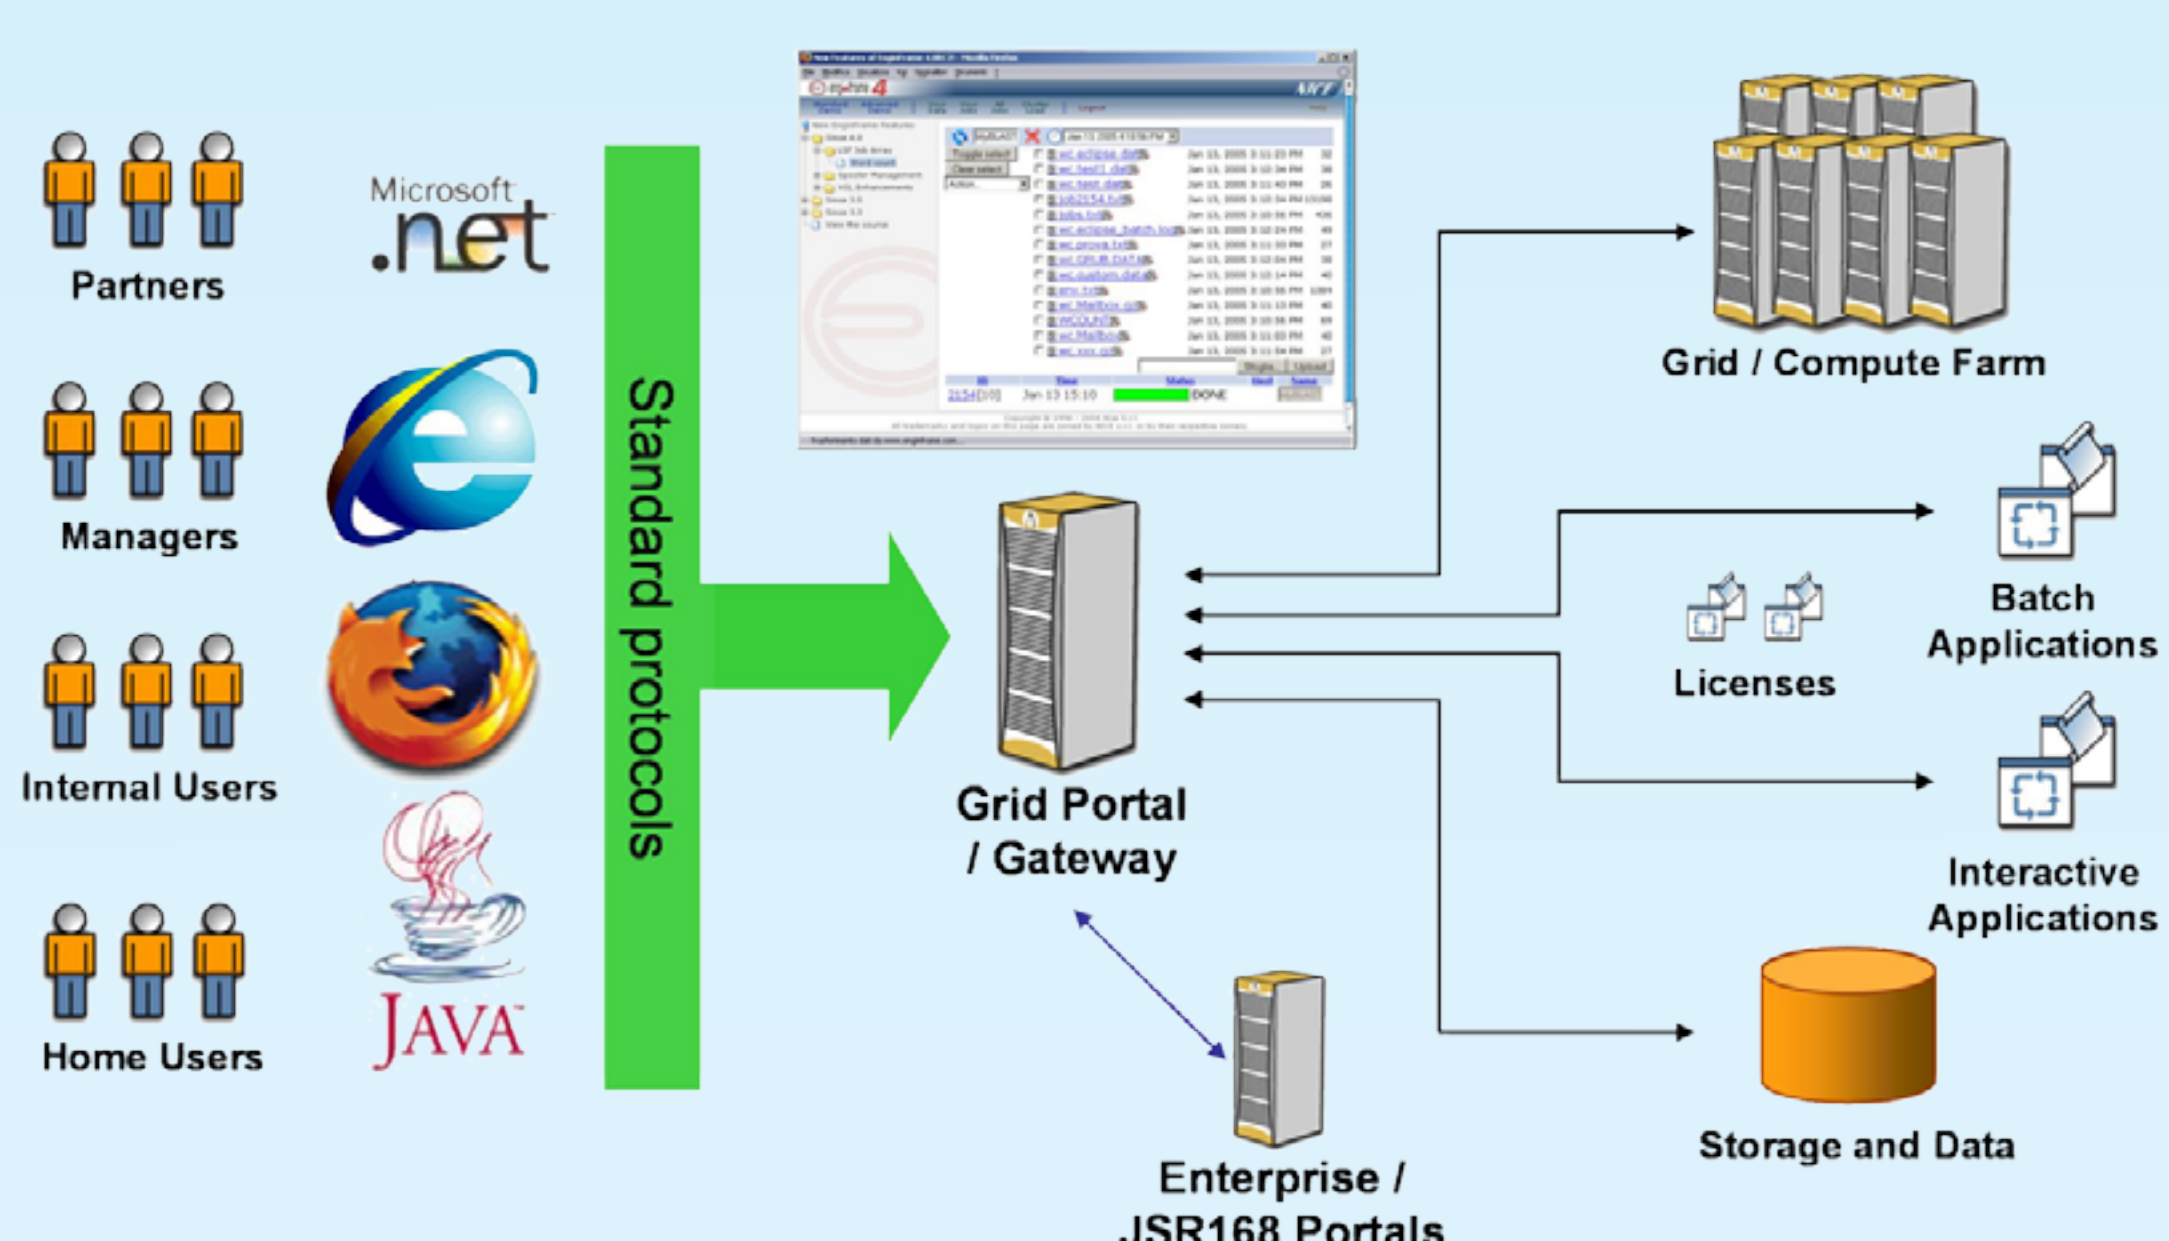

... the Grid has never been so easy!

User-friendly front-end to computing applications from standard Web clients

- Requires little or no training
- Hides the complexity of underlying computing infrastructure
- Broad flexibility to handle most challenging computing activities
- Leverages existing investments in scripting
- Takes advantage of latest Web 2.0 capabilities

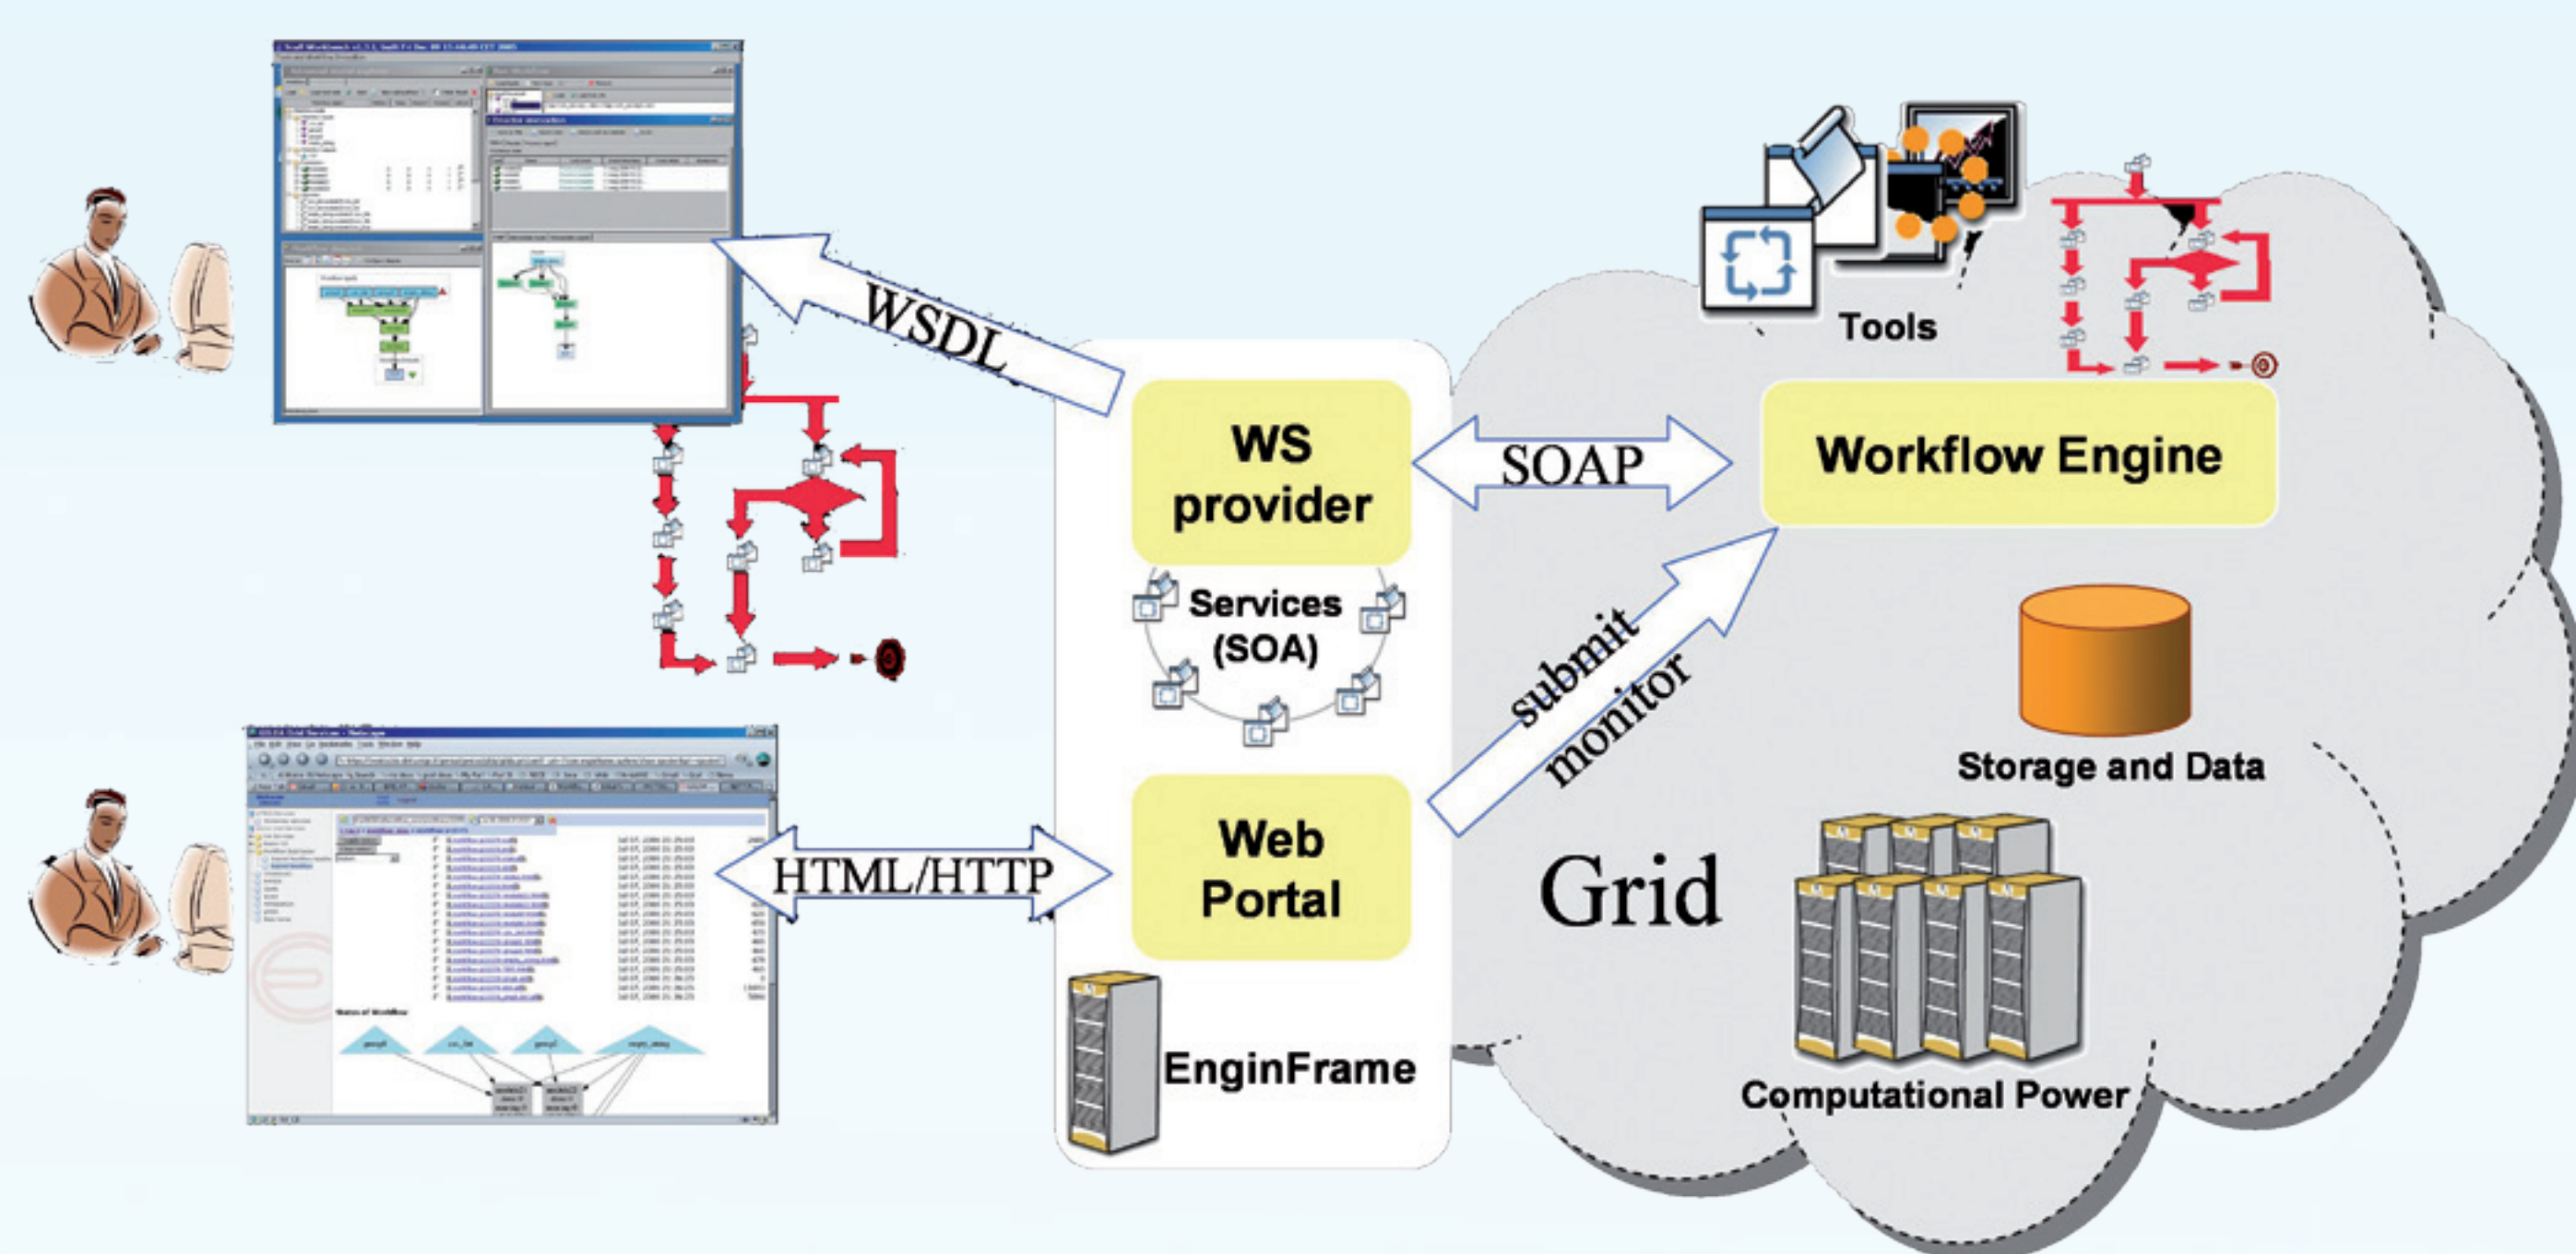

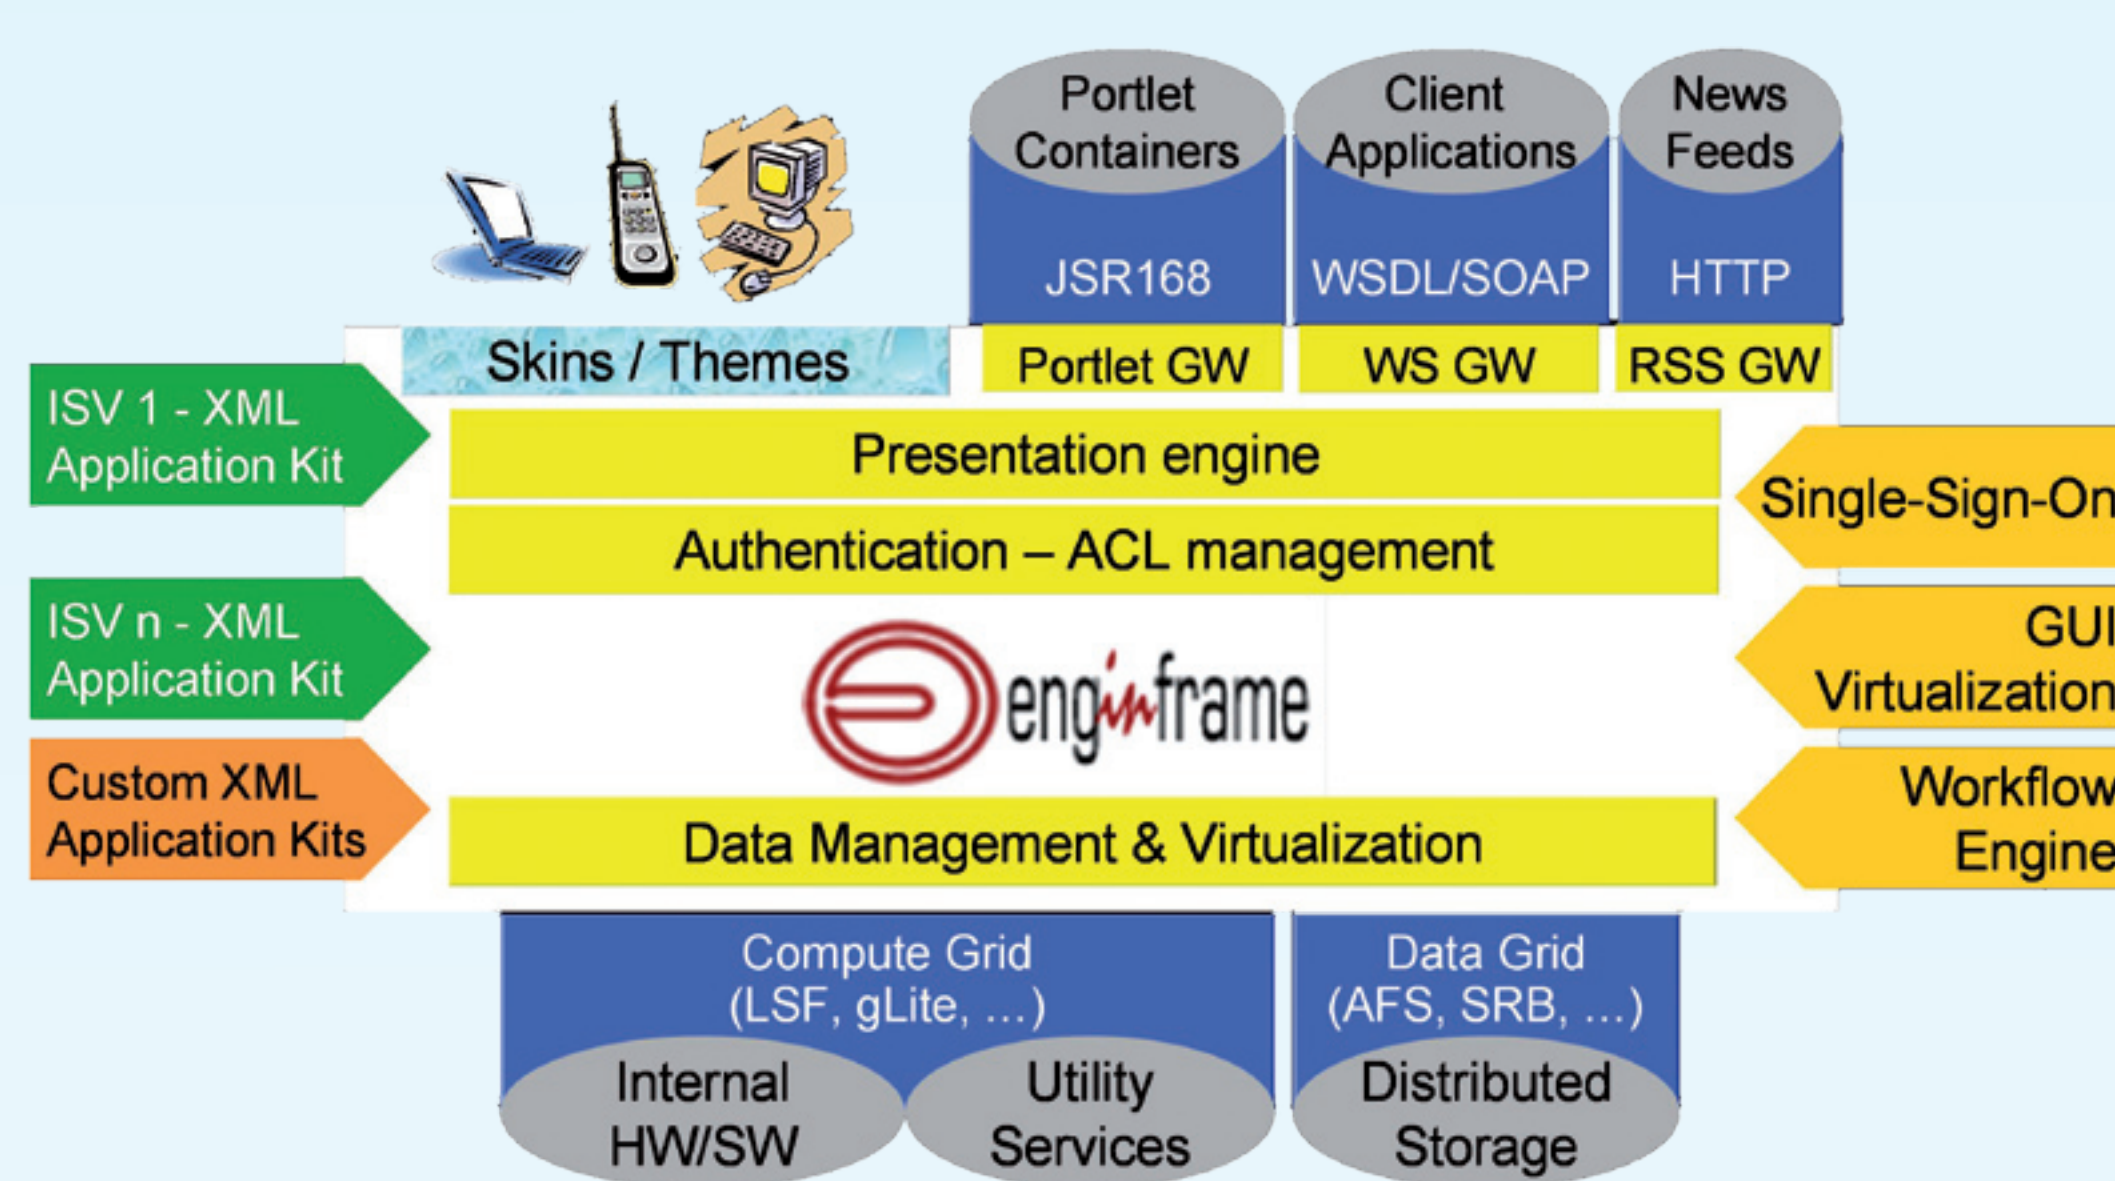

Secure, global access to computing resources and data

- Solves common problems like Windows integration, tele-working, supply chain collaboration, etc.
- Comprehensive data management capabilities
- Support for commercial software license monitoring

Ready for most advanced Enterprise IT infrastructures

- Support for leading industrial and open Grid middleware
- Integration within Identity Management solutions and Enterprise Portals
- Support for leading GUI virtualization tools

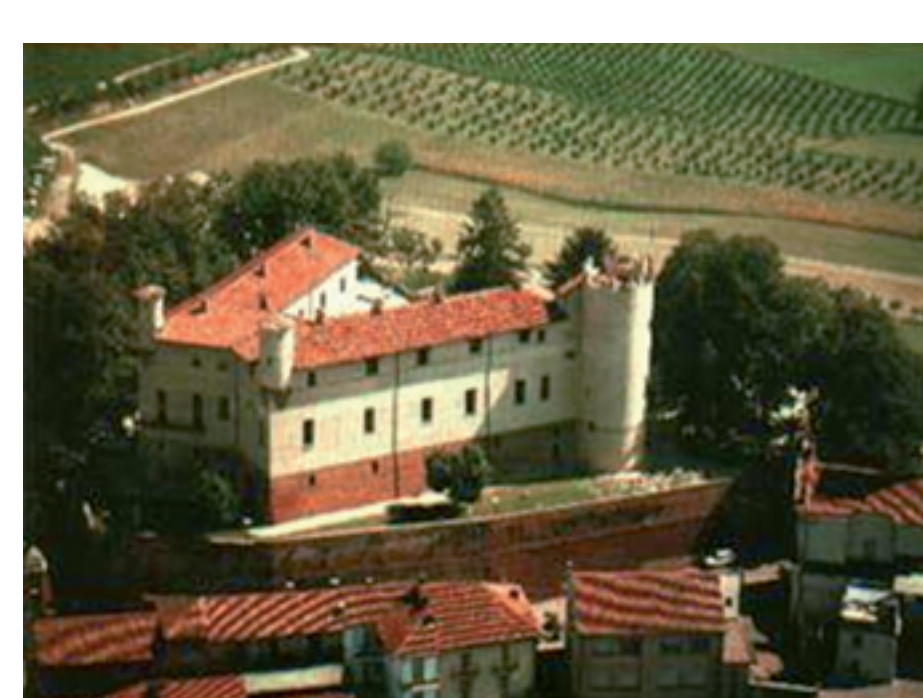

- Enables existing computing applications for SOA
- 3rd party workflow engine support

GRID Computing and Access Solutions

for collaborative computing in virtual organizations
