ISSeG: Site Security Training

Thursday 4 October 2007 14:00 (1h 30m)

Site security is important to us all but how can it be made easier to implement? This training session will outline the approaches to Integrated Site Security (ISS) and the general recommendations that have been identified following practical implementation at two European Grid sites. The emphasis is on practical advice on how to link technical, administrative and training issues to improve overall site security independent of site size, VO type or your role within the site. The session is not solely focused on technical issues so users and managers / administrators will be able to take away some advice for their sites.

Presenter: JACKSON, David (Unknown)

Session Classification: EGEE Operations (SA1)
