Termination
Shock

Solar Wind

Heliosheath

Muller, Zank

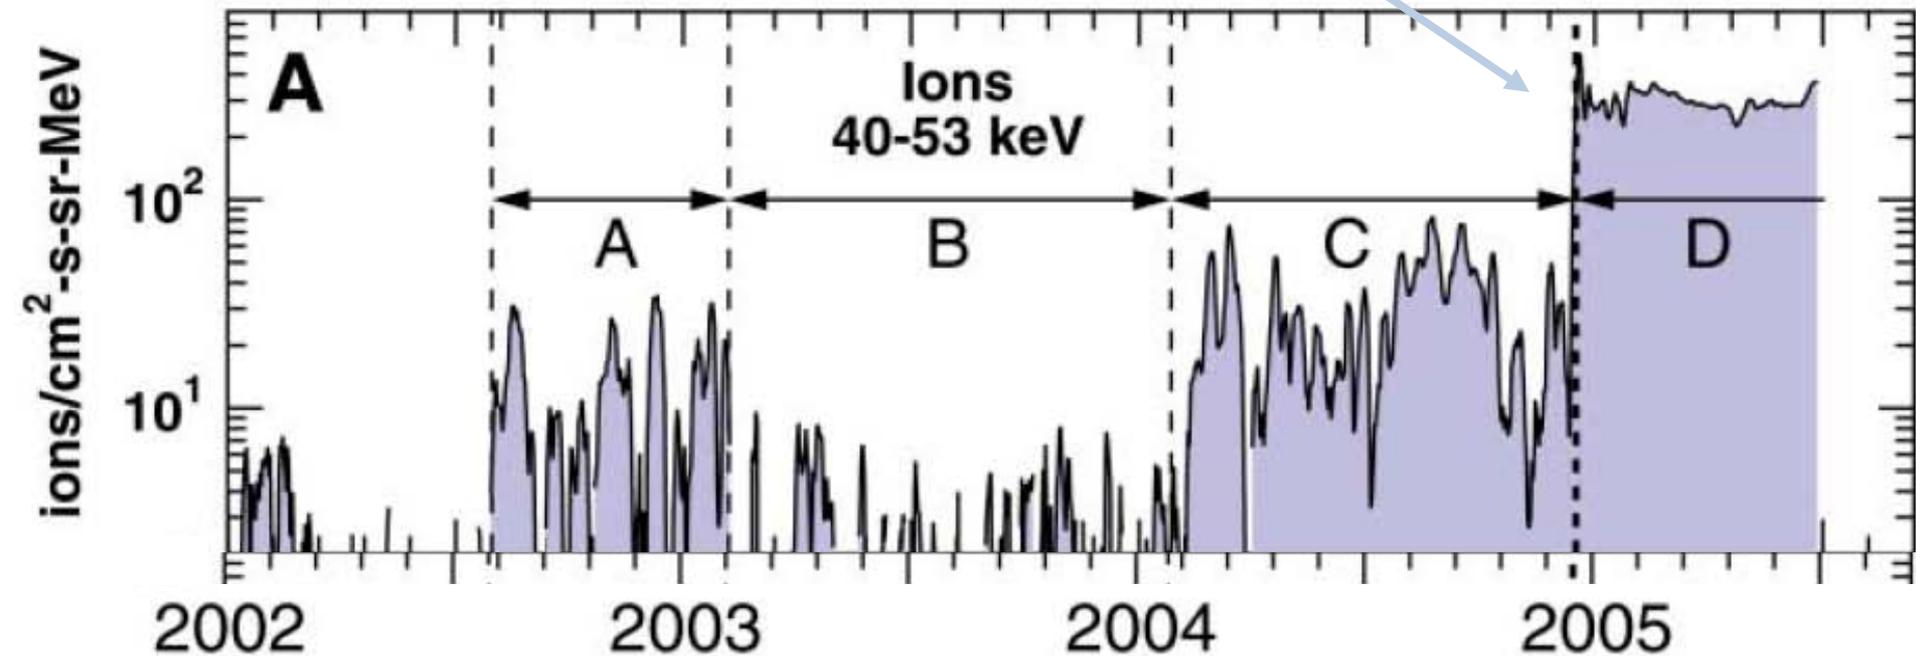

Shock at 94 AU

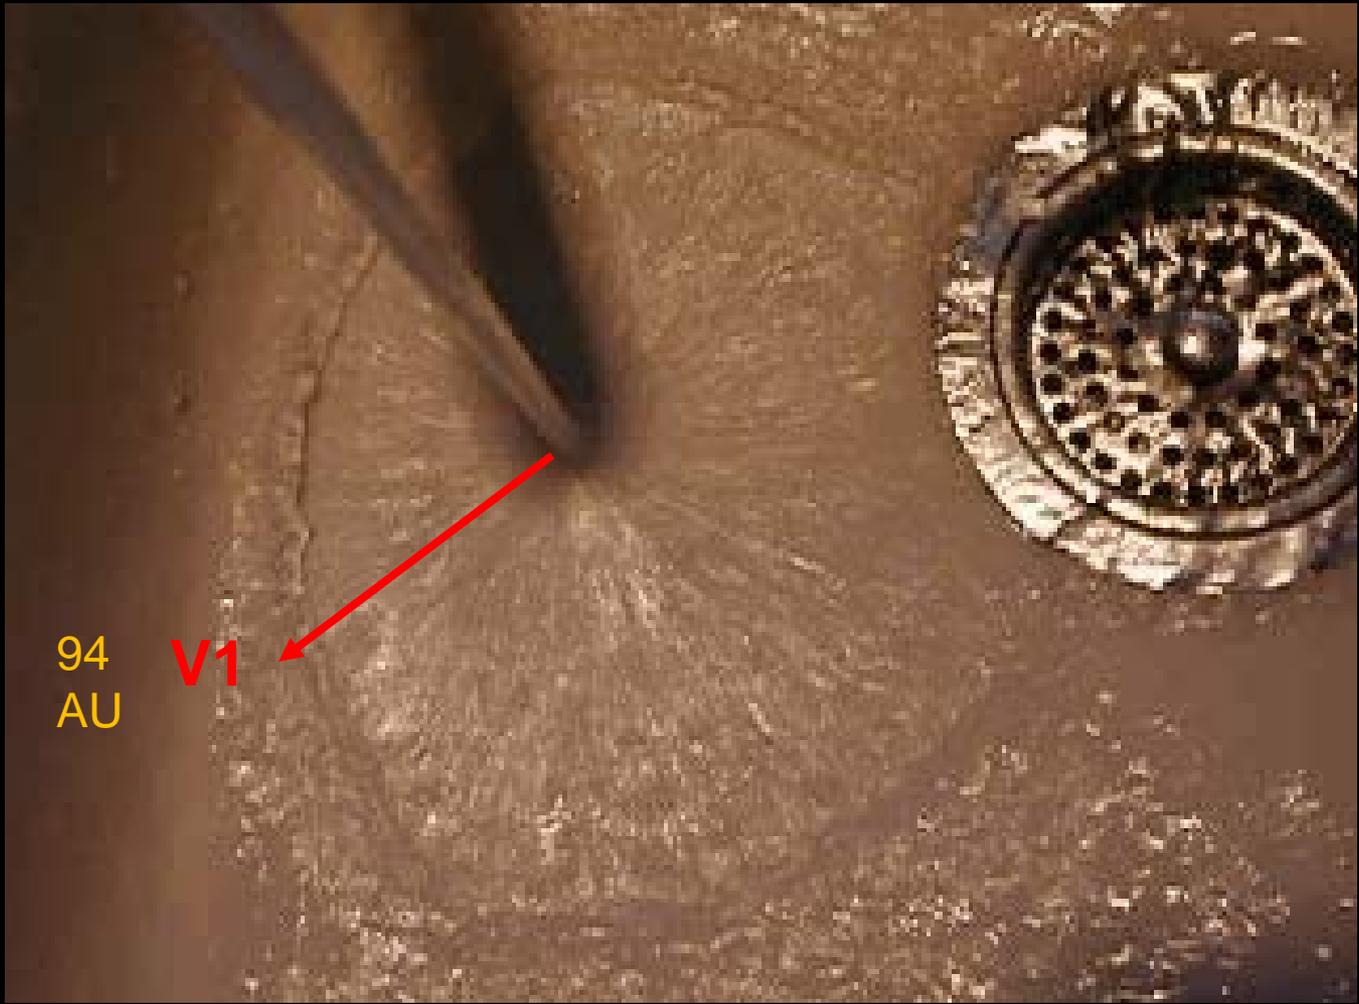

8.7 billion miles

December 16, 2004

Shock is source of
low energy ions

1% speed of light

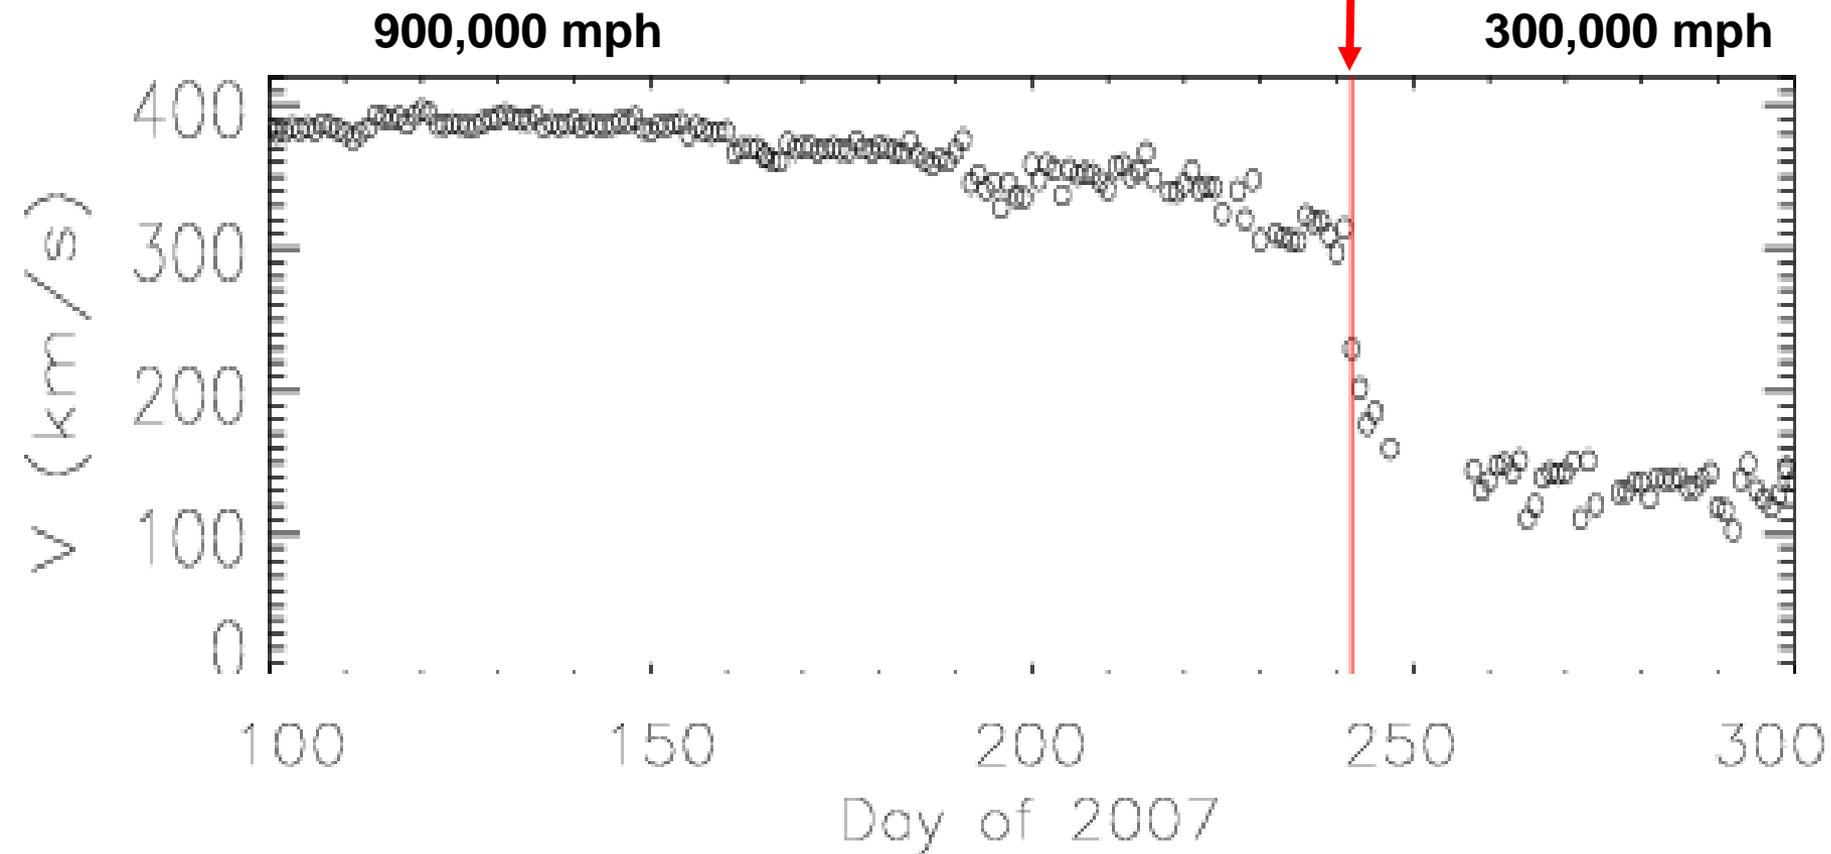

94
AU

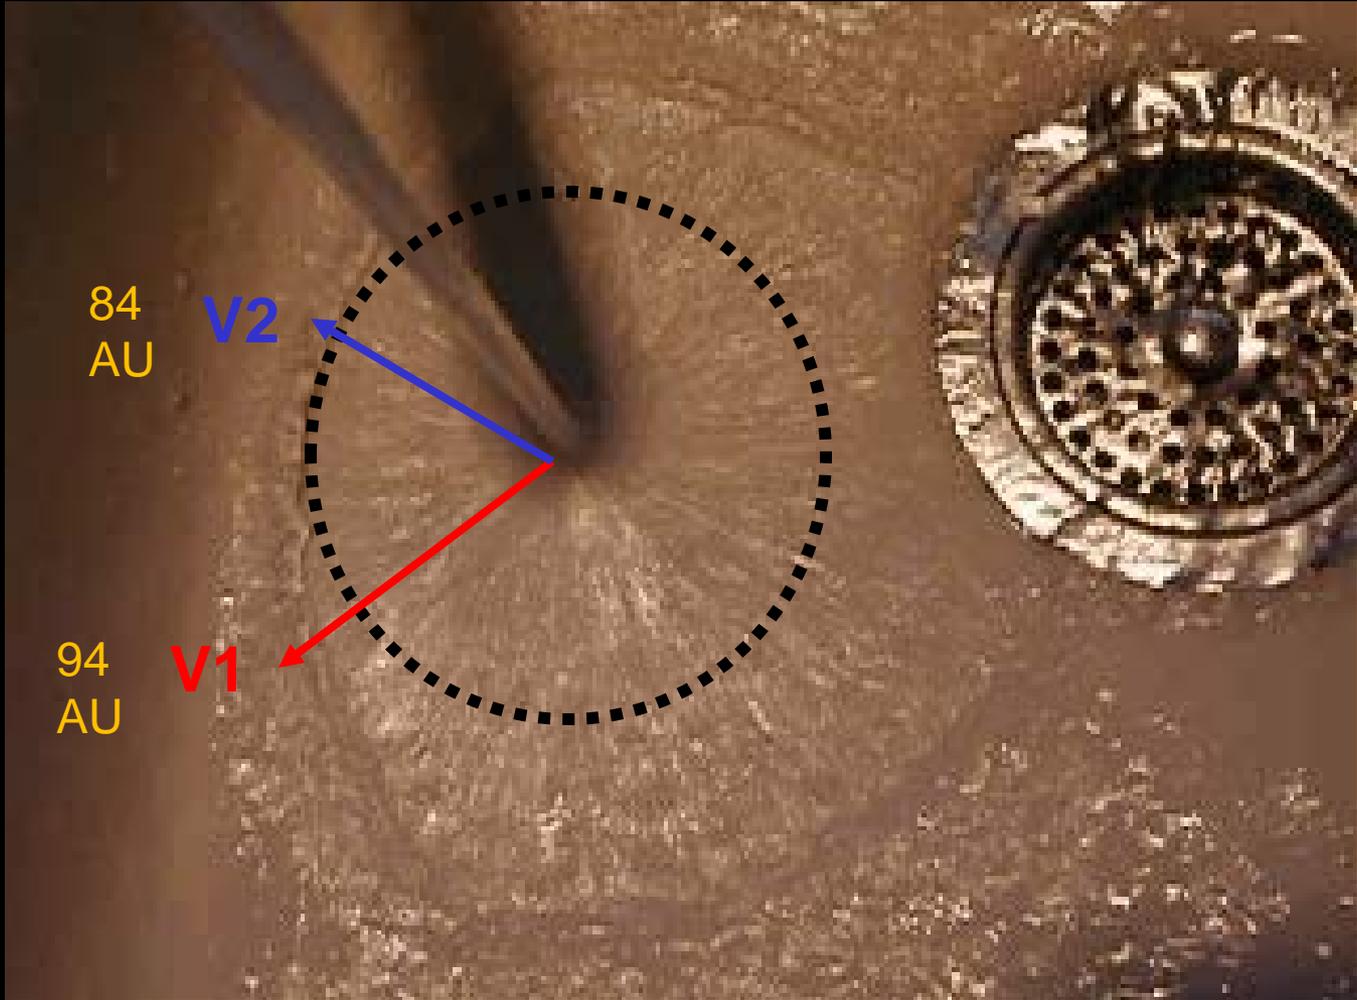

V1

V2 crossed termination shock at 83.7 AU

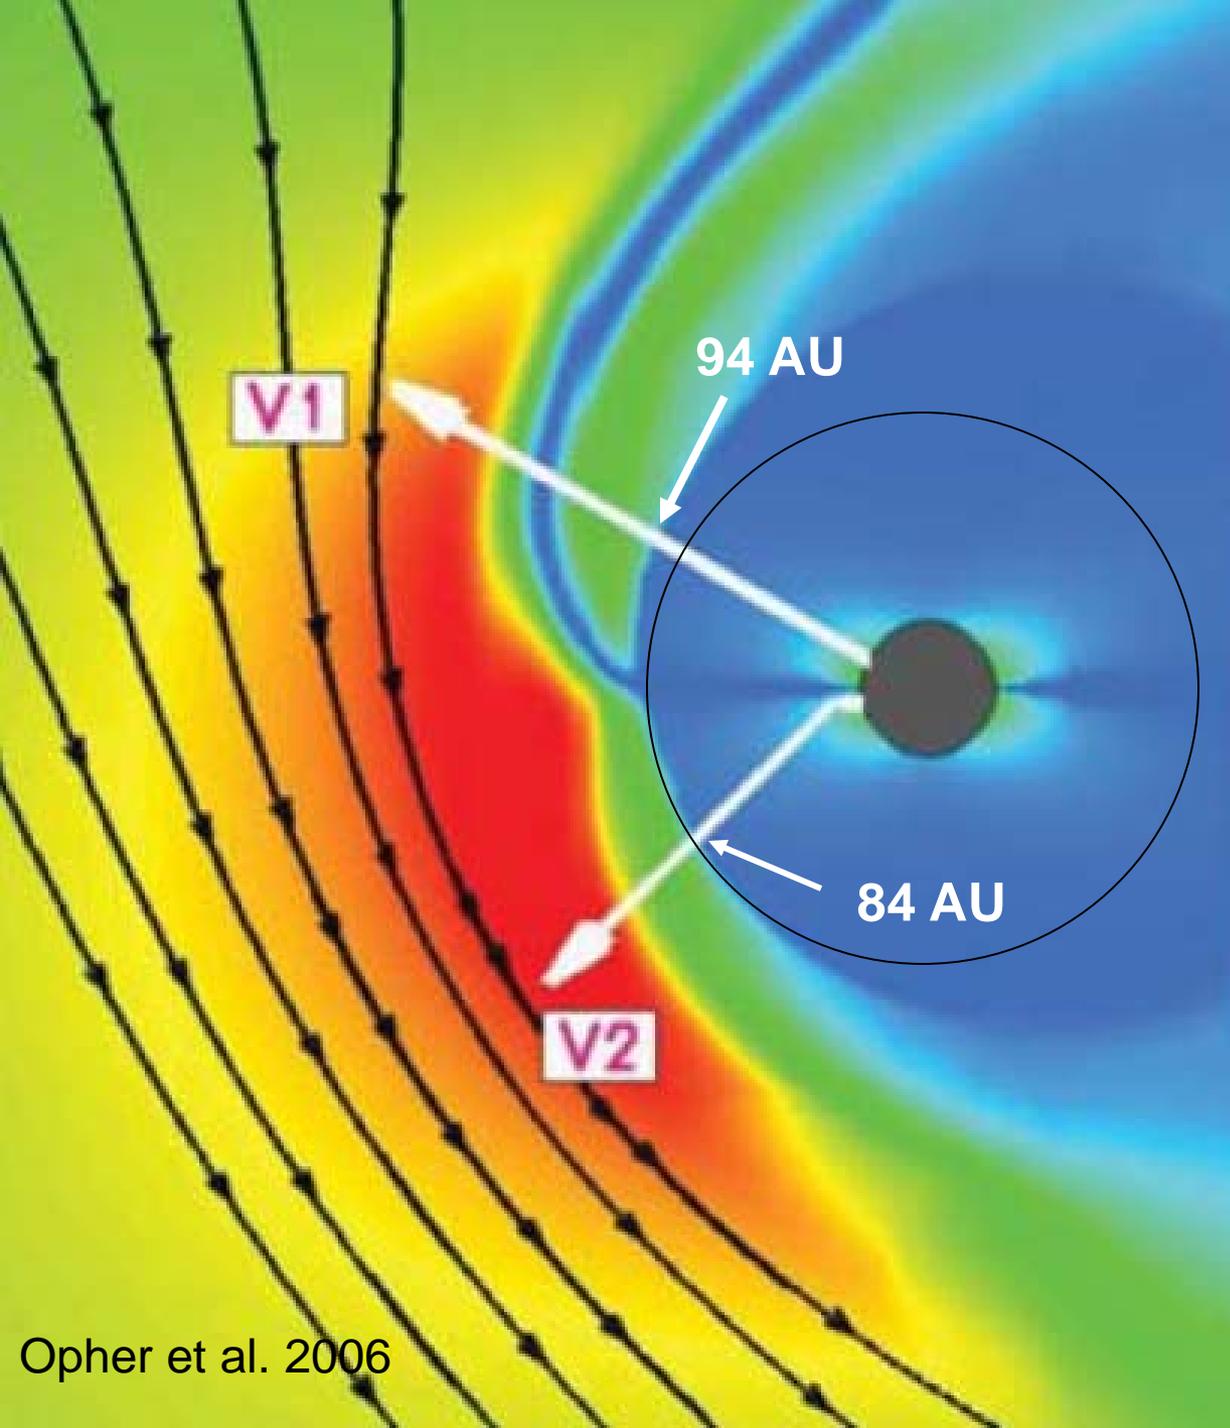

7.8 billion miles

August 30, 2007

Interstellar magnetic field presses inward in southern hemisphere

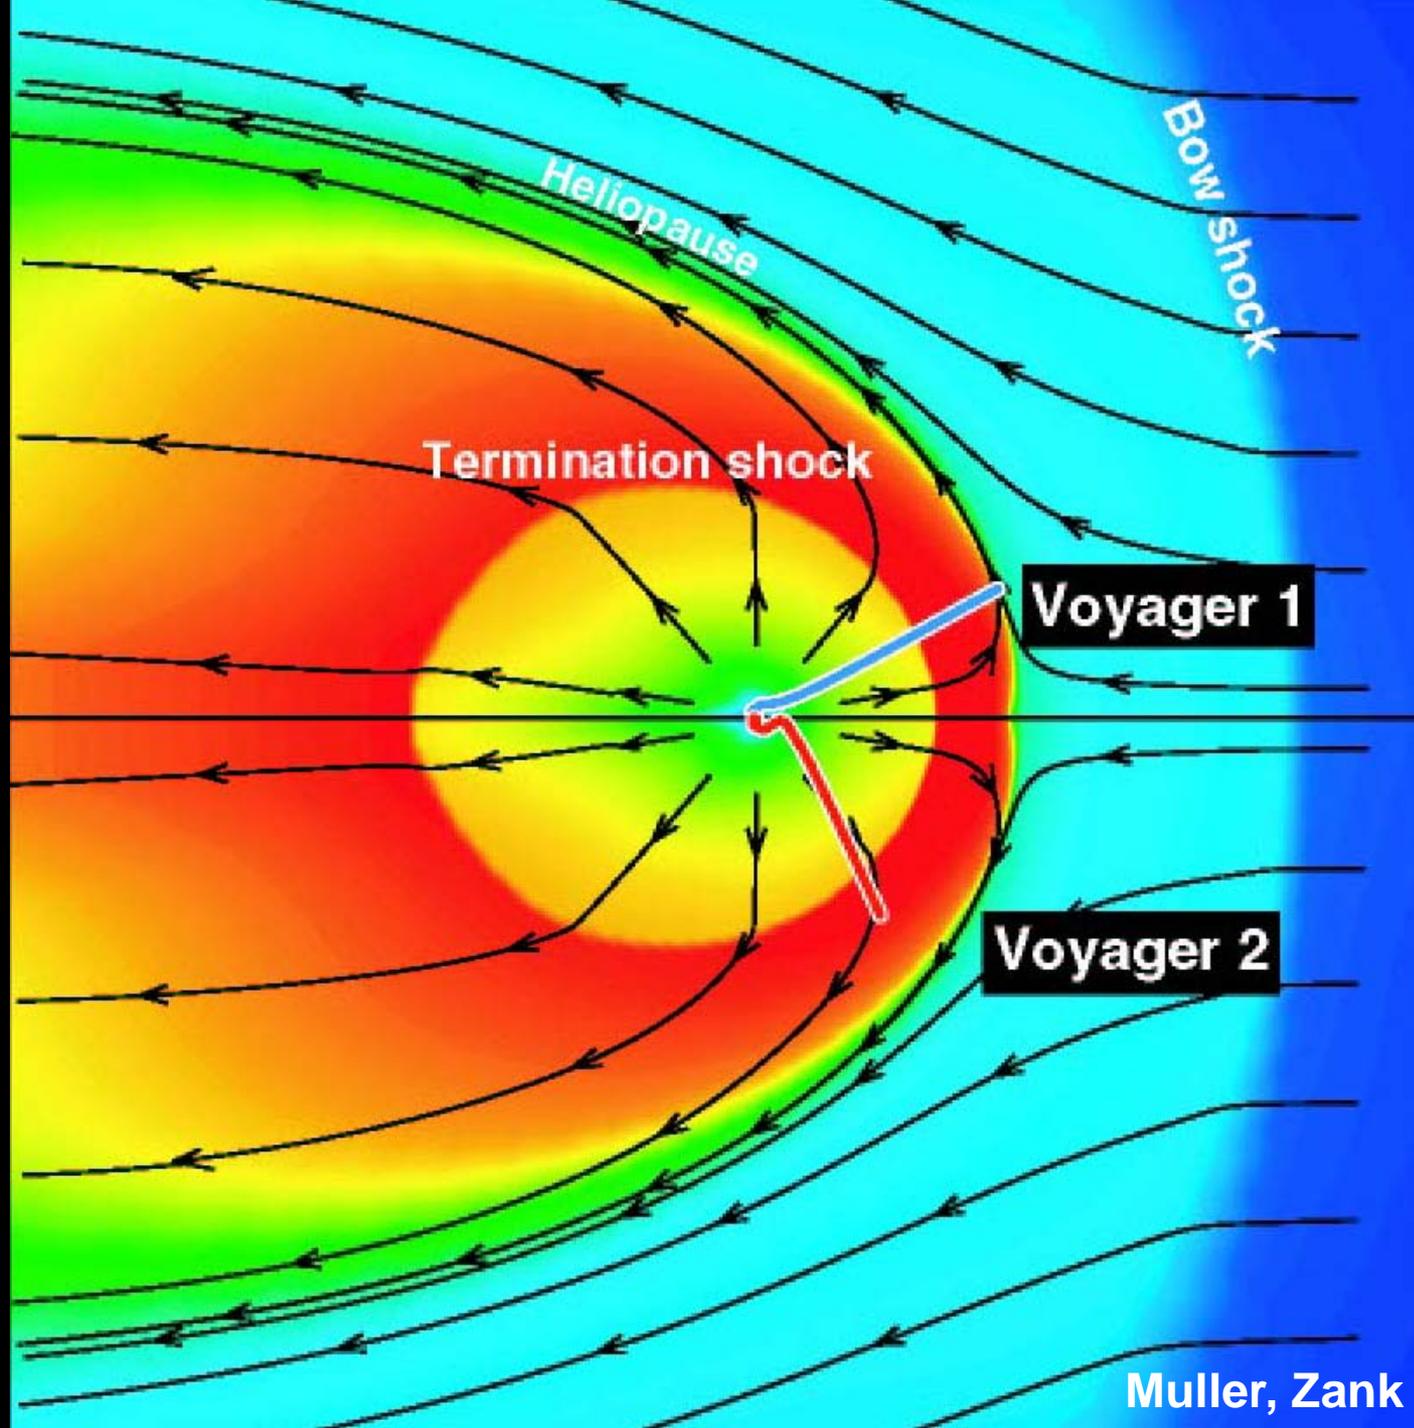

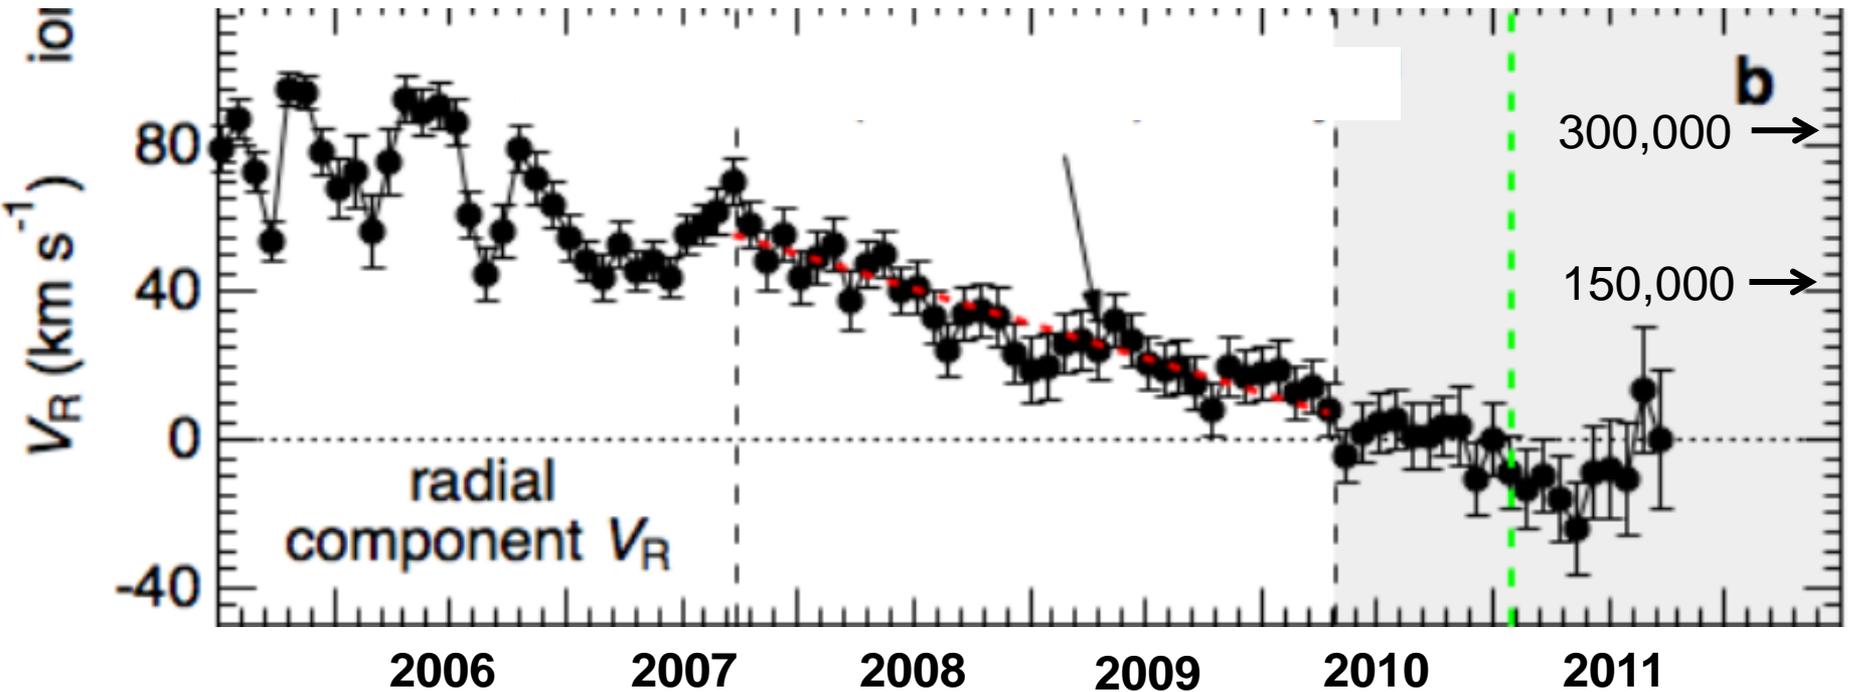

V1

94 AU

84 AU

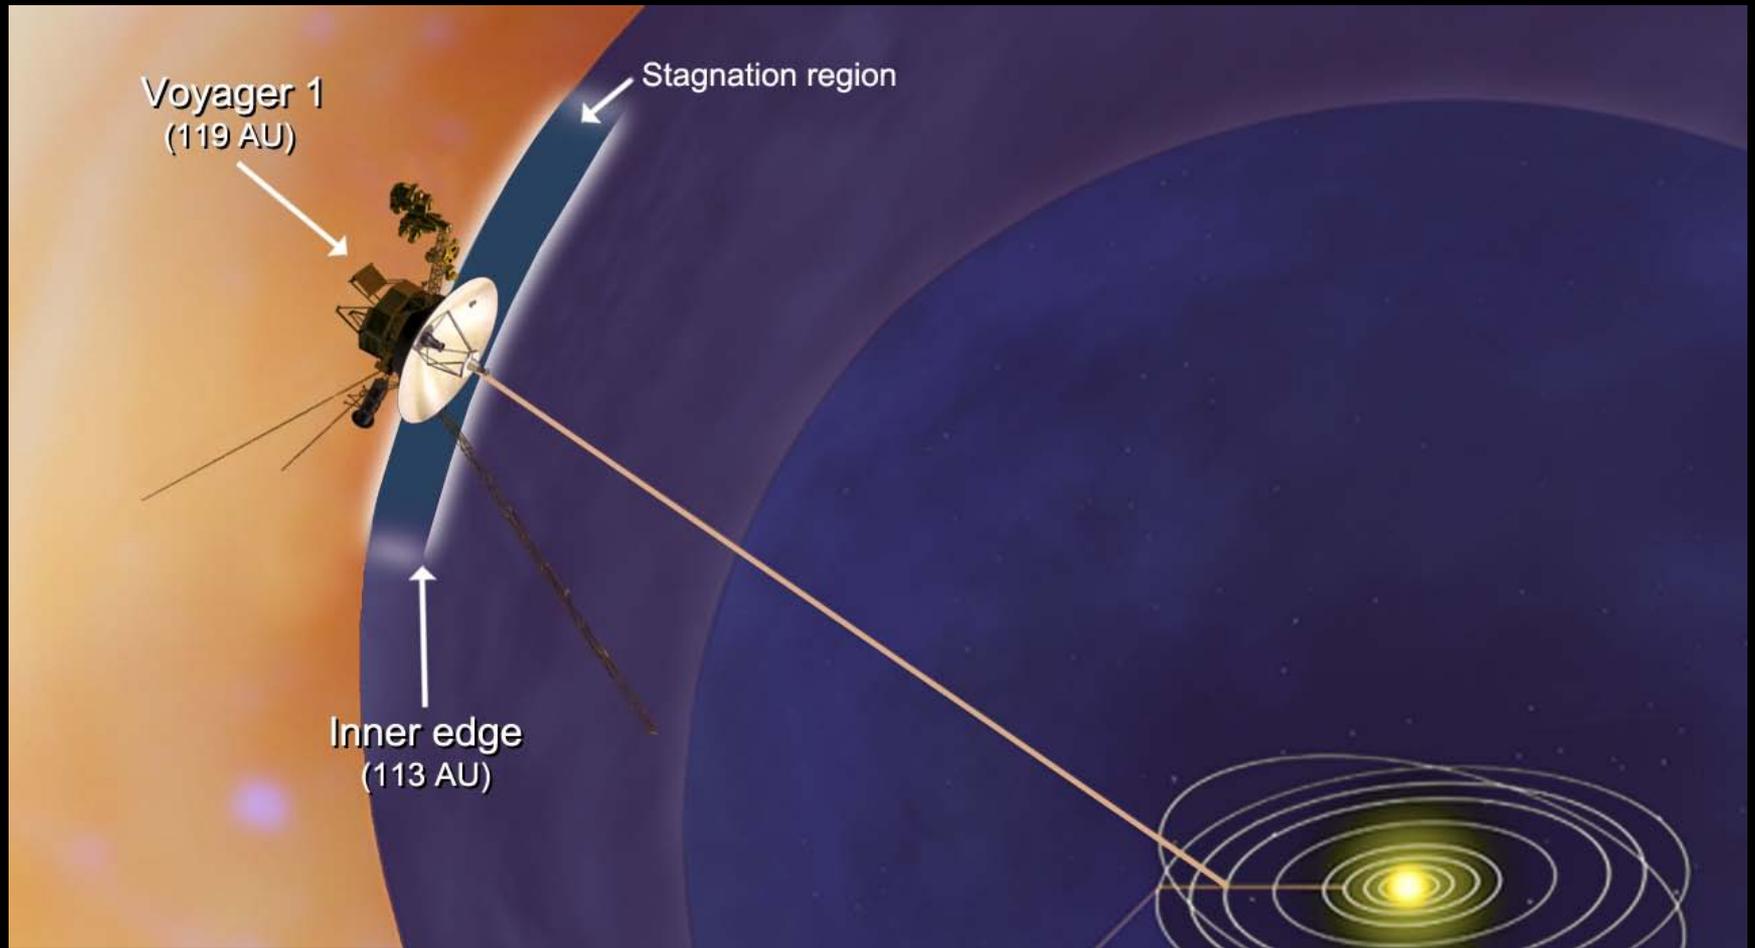

V2

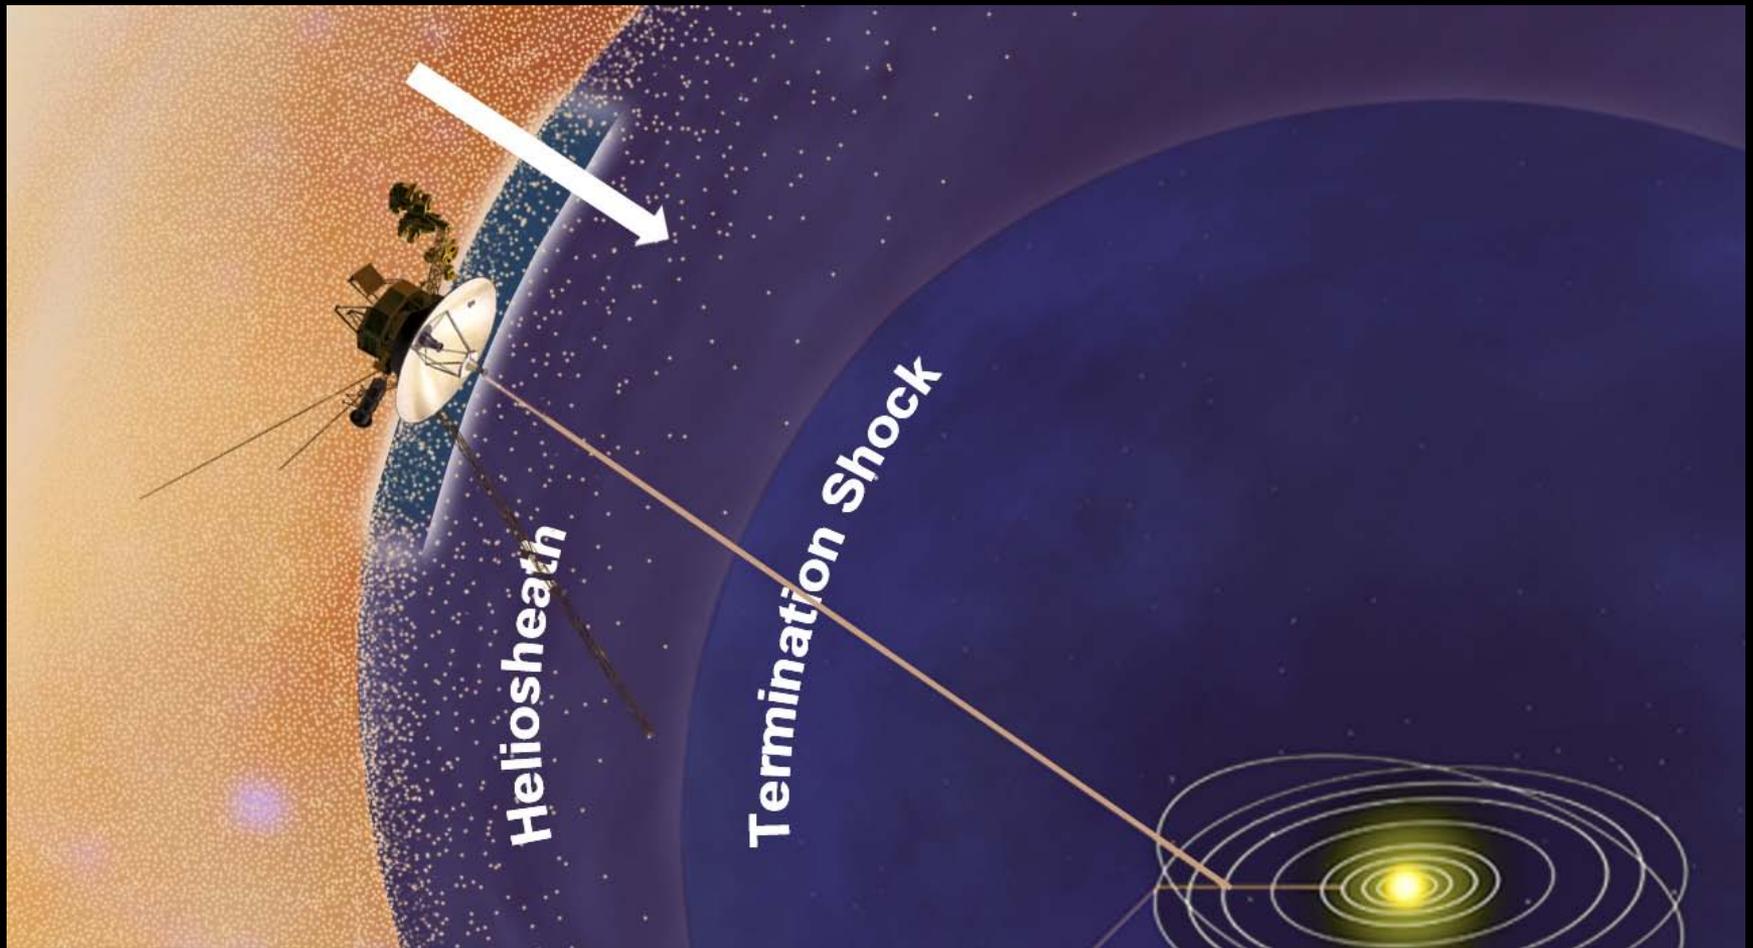

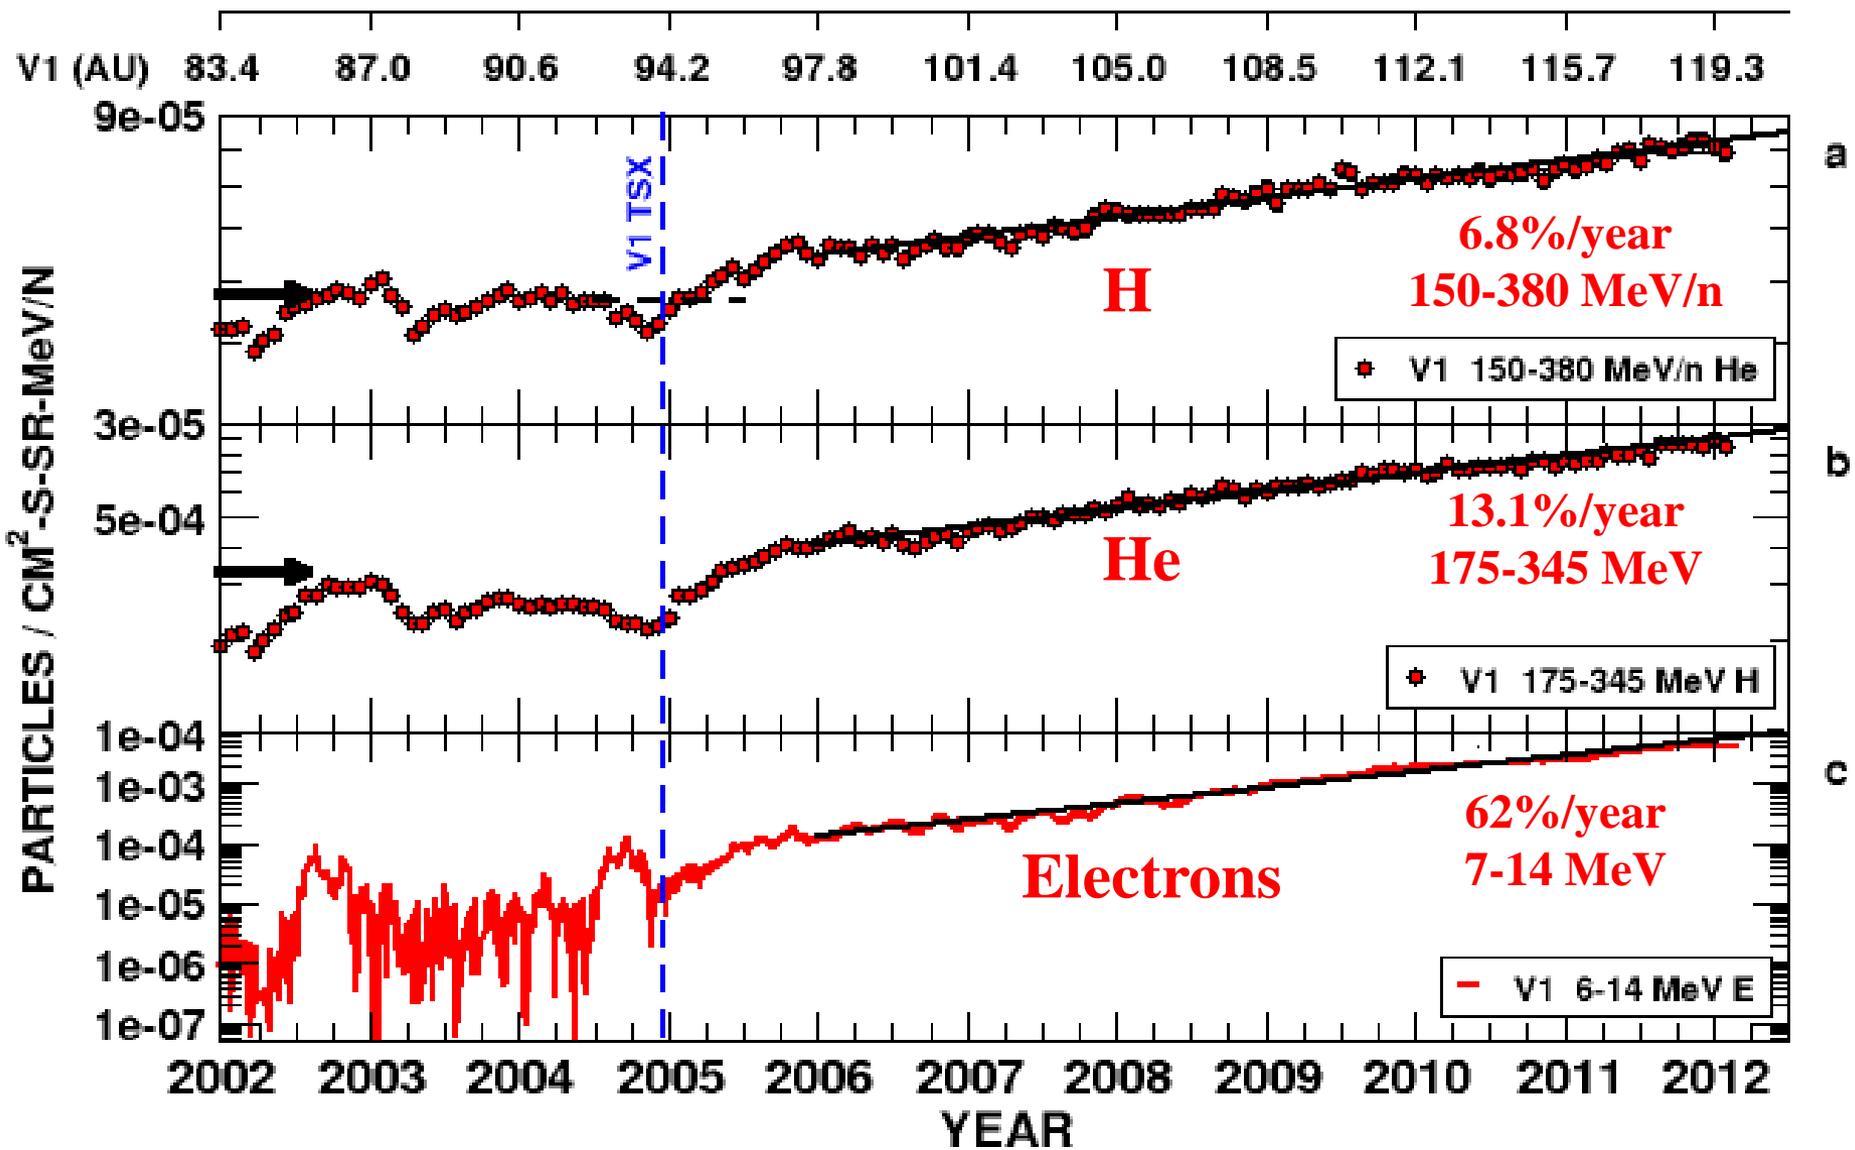

In 2010, the solar wind was no longer moving outward- a quasi-stagnation region

Stagnation Region

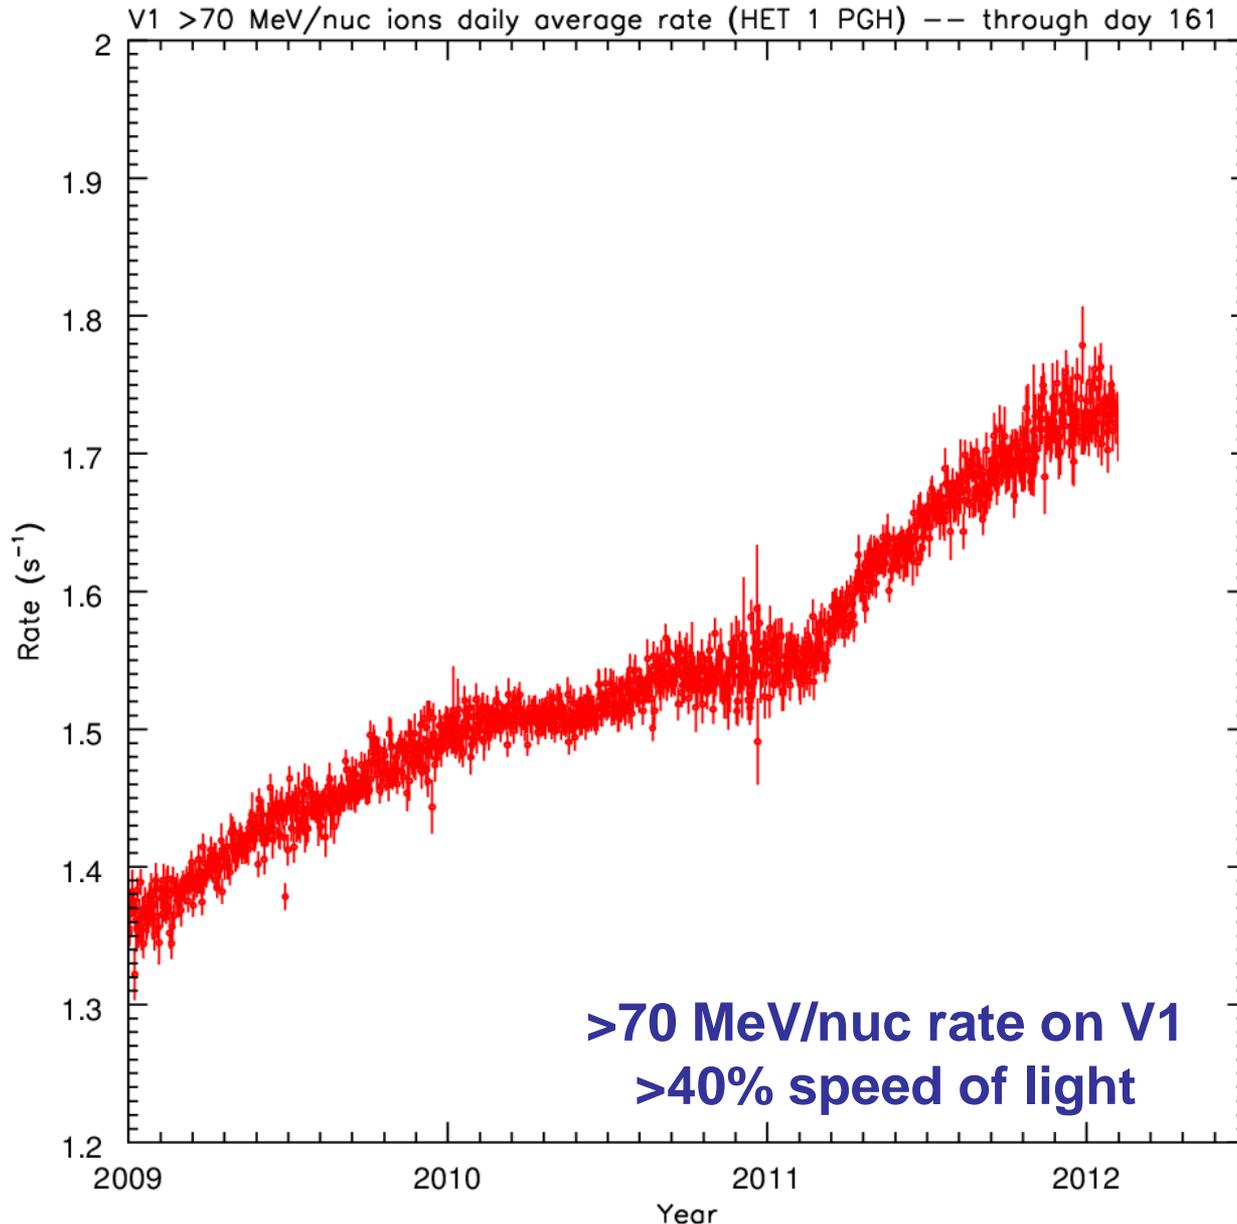

Cosmic Rays from Nearby Supernovas Diffusing In (nuclei with $>40\%$ speed of light)

Rate of Cosmic Rays Diffusing in from Galaxy

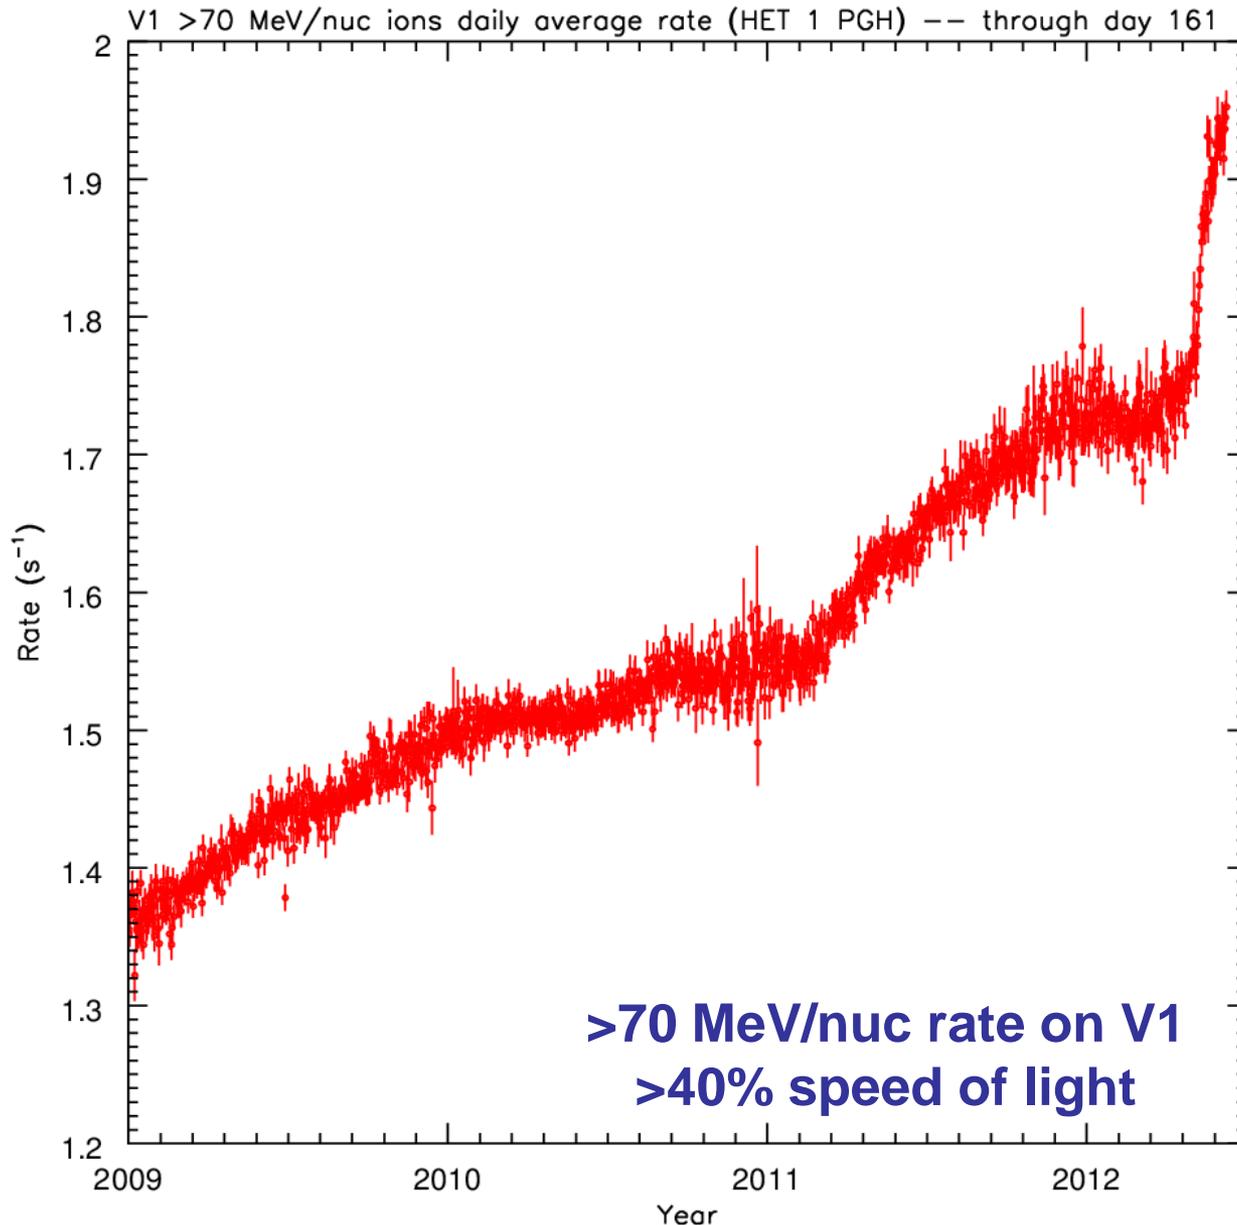

Jun 13 12:55 2012 File : ~oce/sm/voyager/May_2012_increase/v1.IPGH_time.ps

Rate increased
9% per year
over last 3 years

Rate of Cosmic Rays Diffusing in from Galaxy

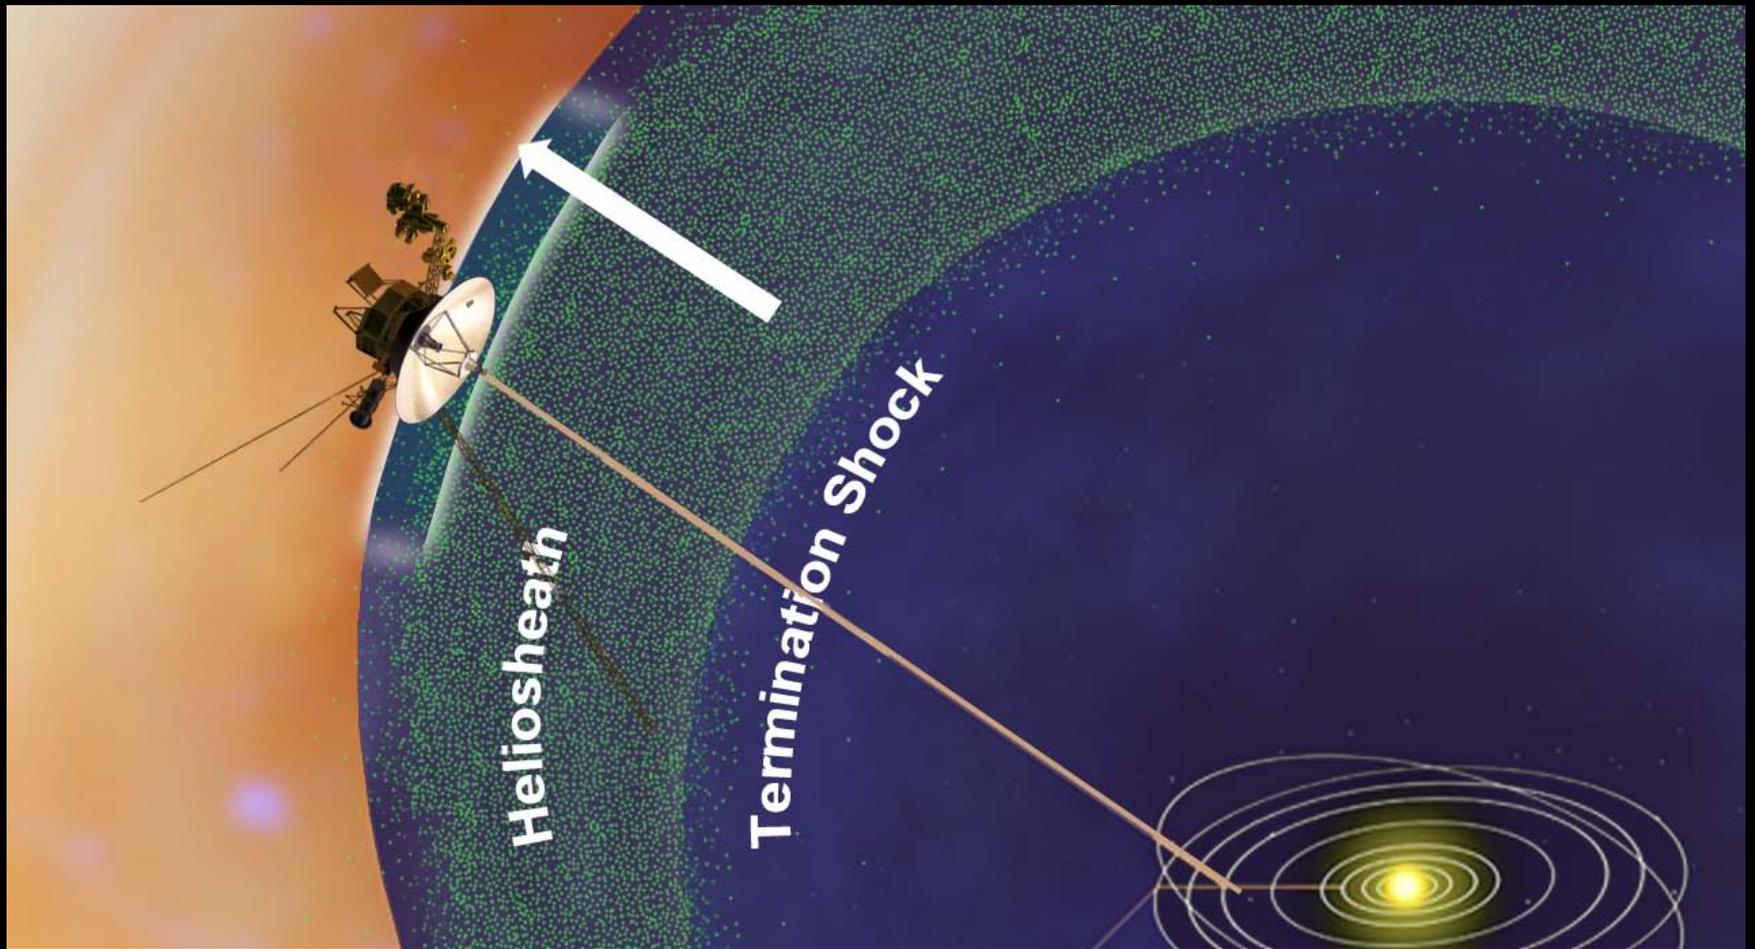

Jun 13 12:55 2012 File : ~oce/sm/voyager/May_2012_increase/v1.IPGH_time.ps

Rate increased
9% per year
over last 3 years

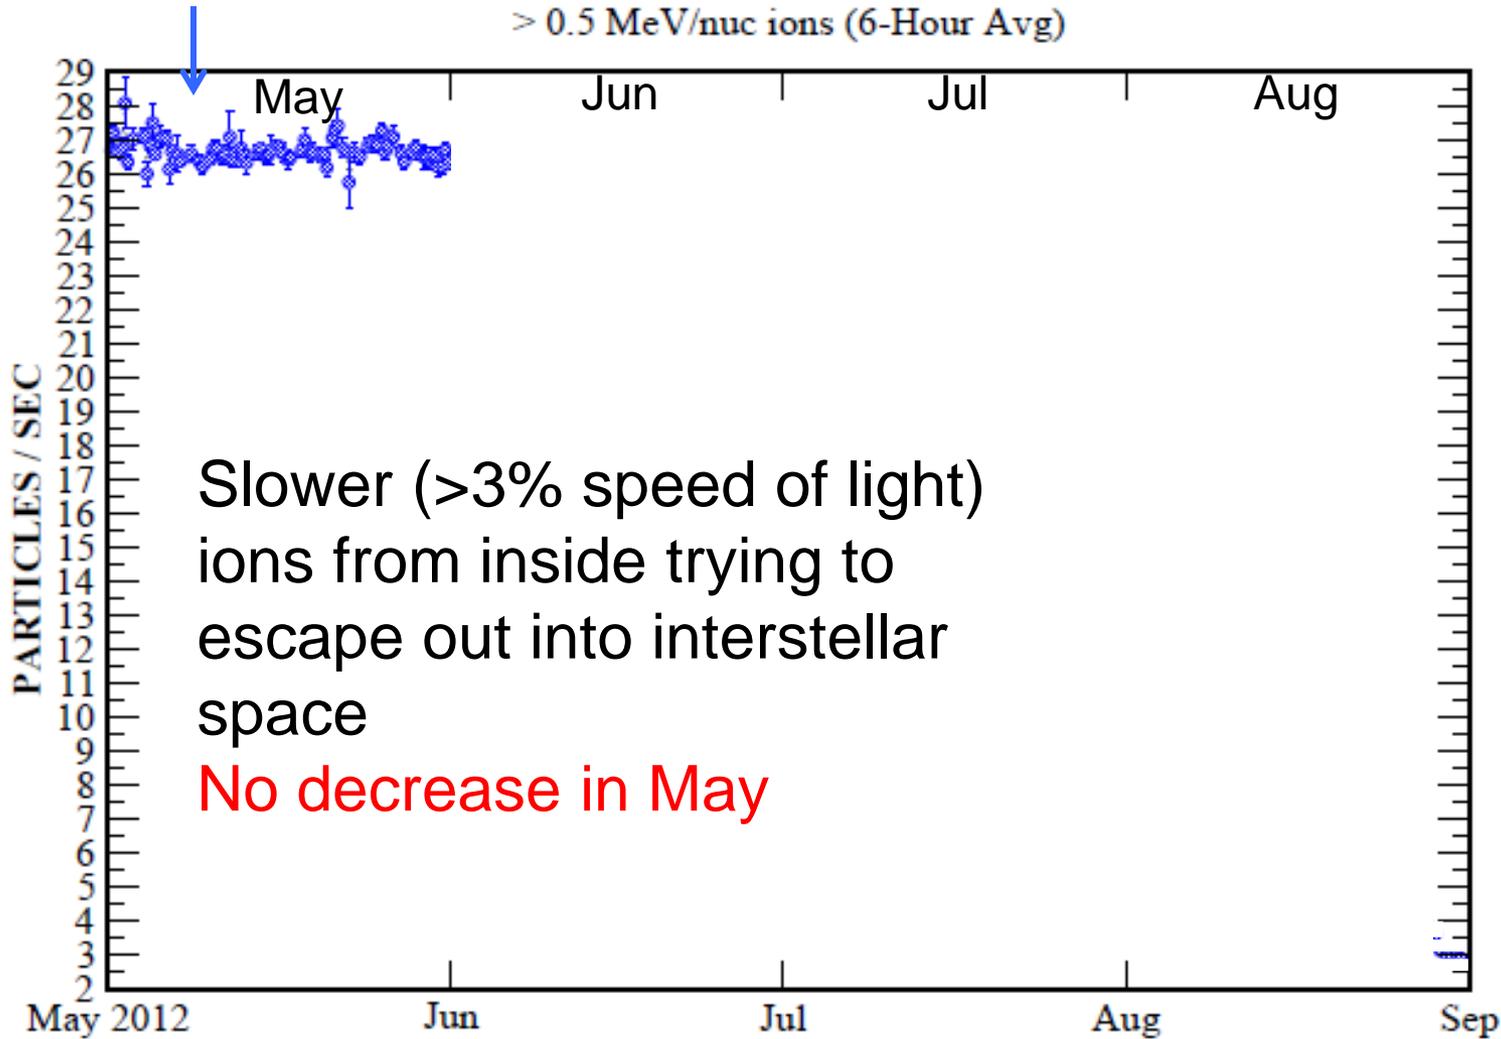

In May the rate
increased 5% in
one week and
9% in a month

Energetic Ions from Termination Shock Leaking Out (nuclei with $\sim 5\%$ speed of light)

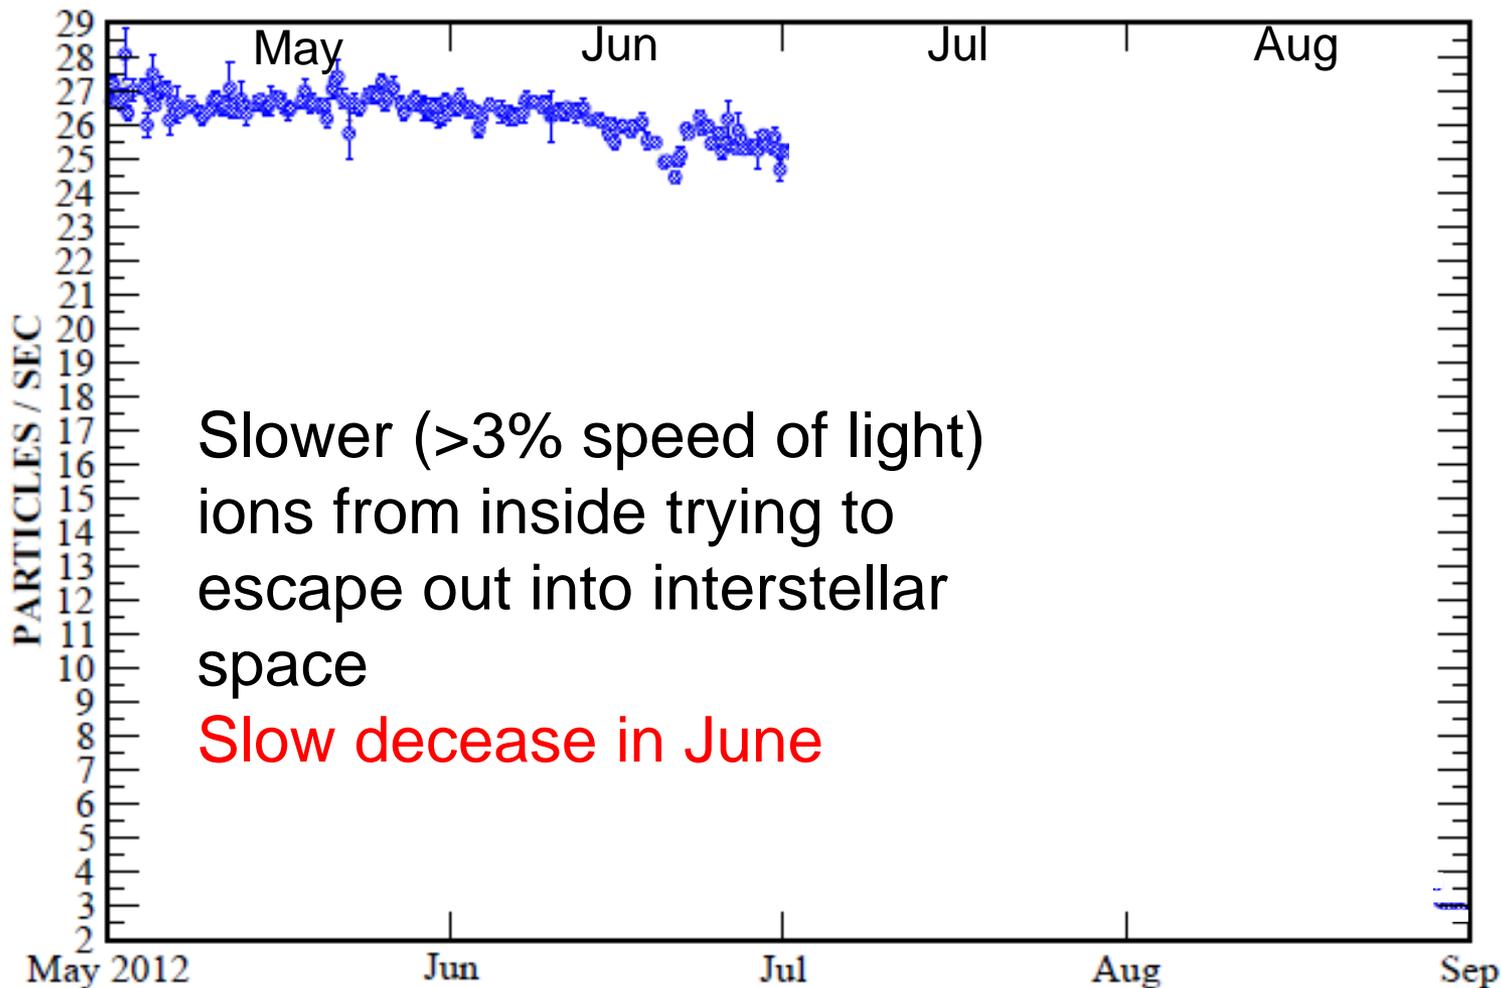

VOYAGER-1

> 0.5 MeV/nuc ions (6-Hour Avg)

VOYAGER-1

> 0.5 MeV/nuc ions (6-Hour Avg)

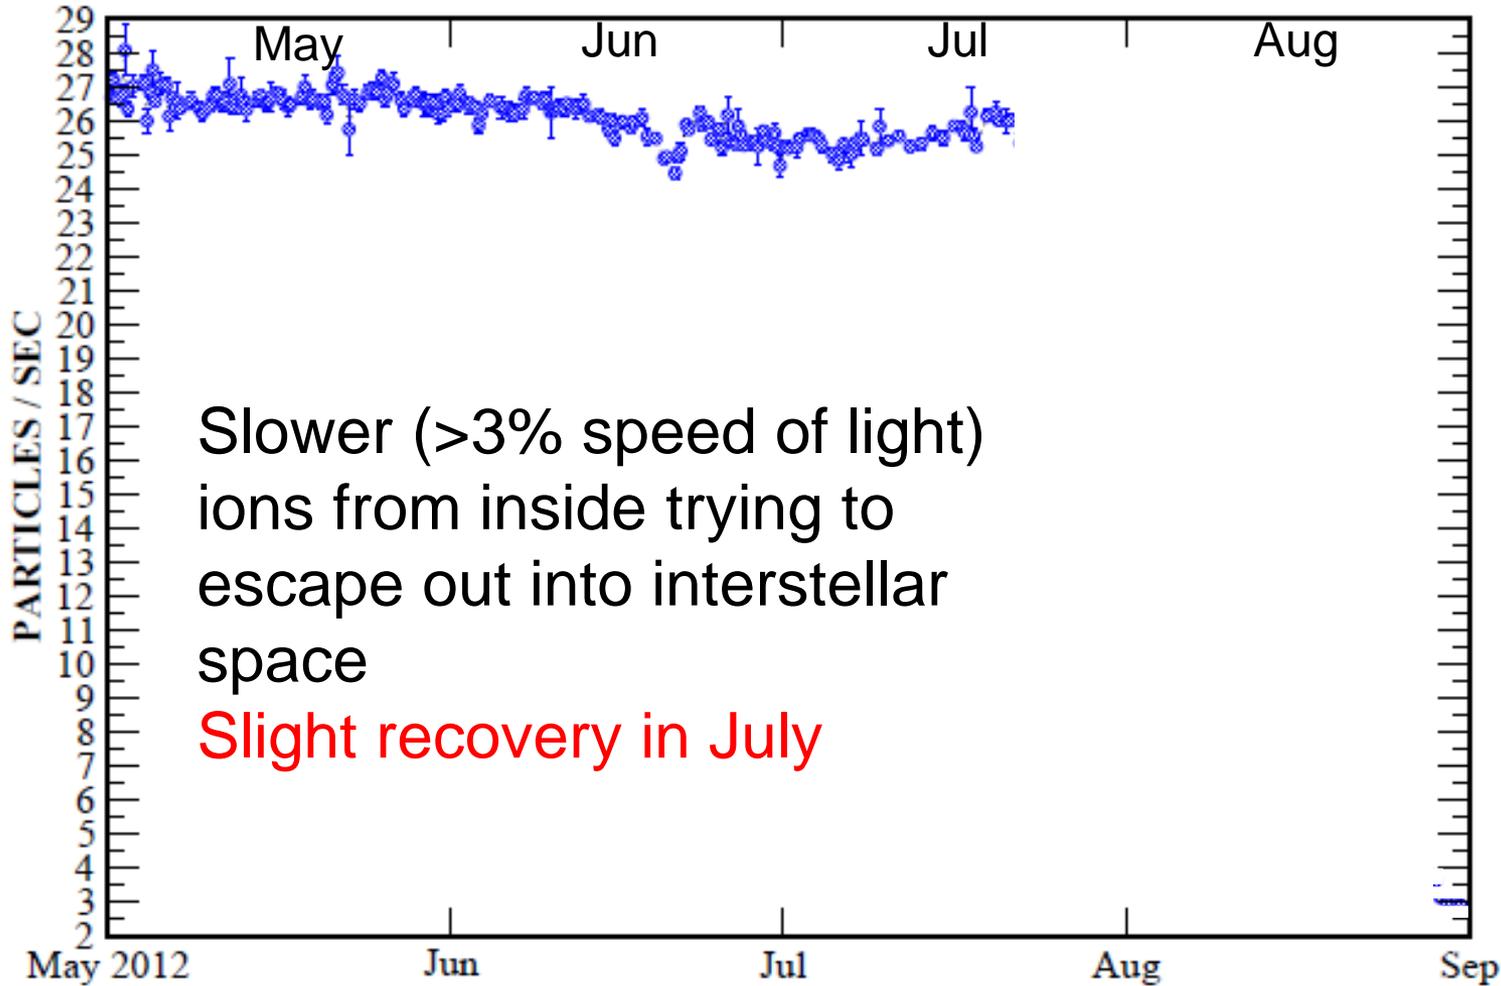

Slower (>3% speed of light)
ions from inside trying to
escape out into interstellar
space

Slow decrease in June

VOYAGER-1

> 0.5 MeV/nuc ions (6-Hour Avg)

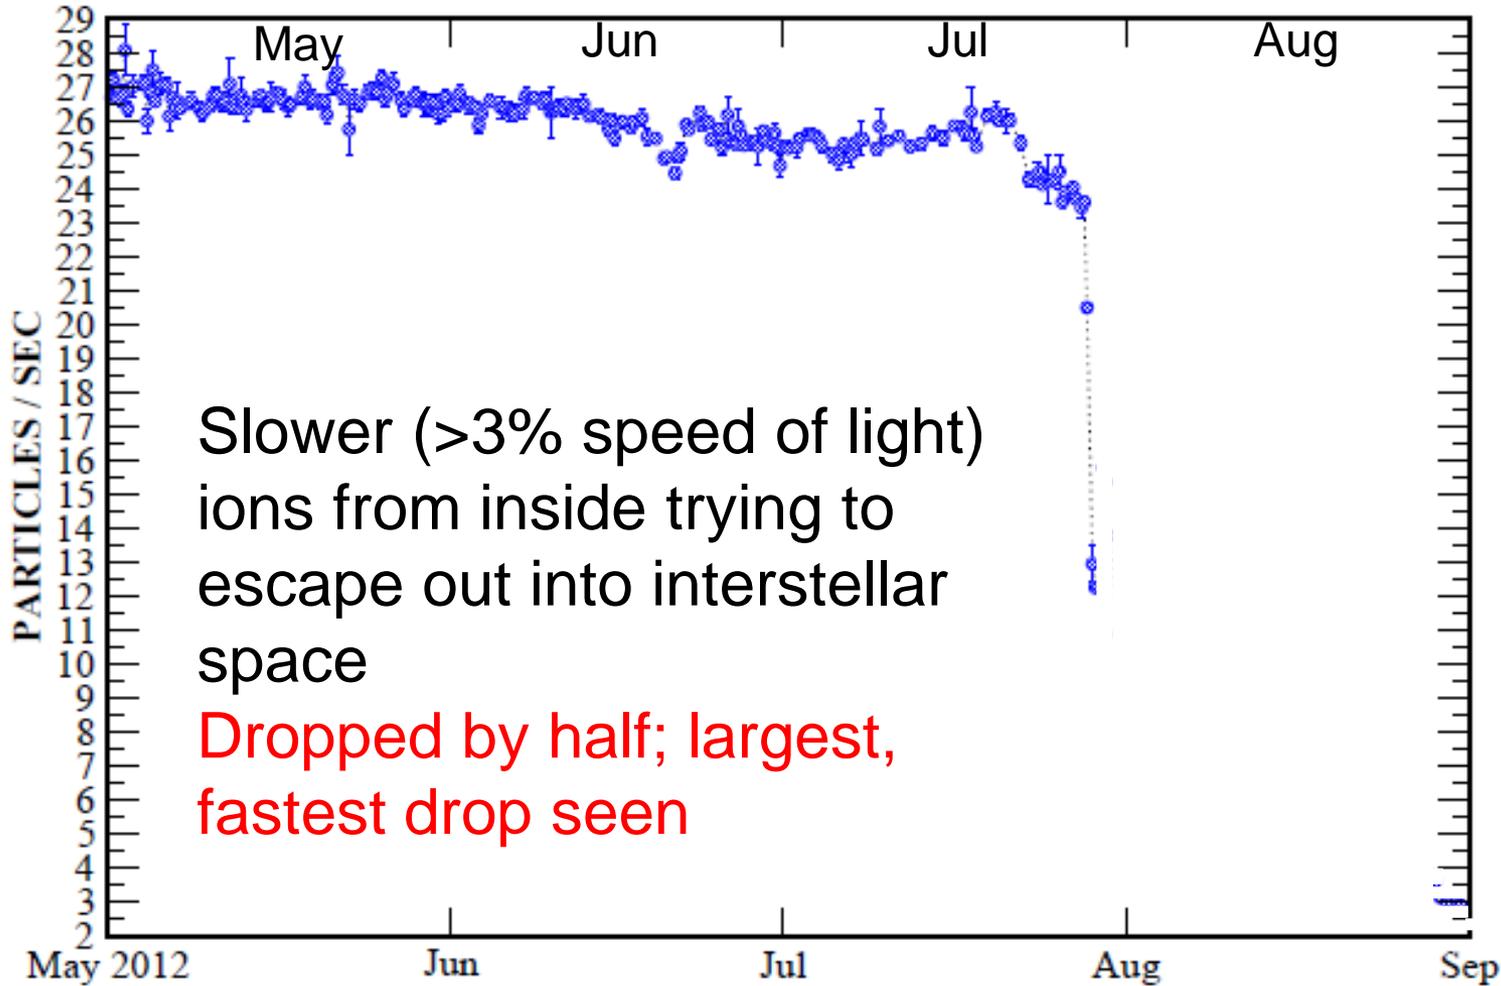

Slower (>3% speed of light)
ions from inside trying to
escape out into interstellar
space

Slight recovery in July

VOYAGER-1

> 0.5 MeV/nuc ions (6-Hour Avg)

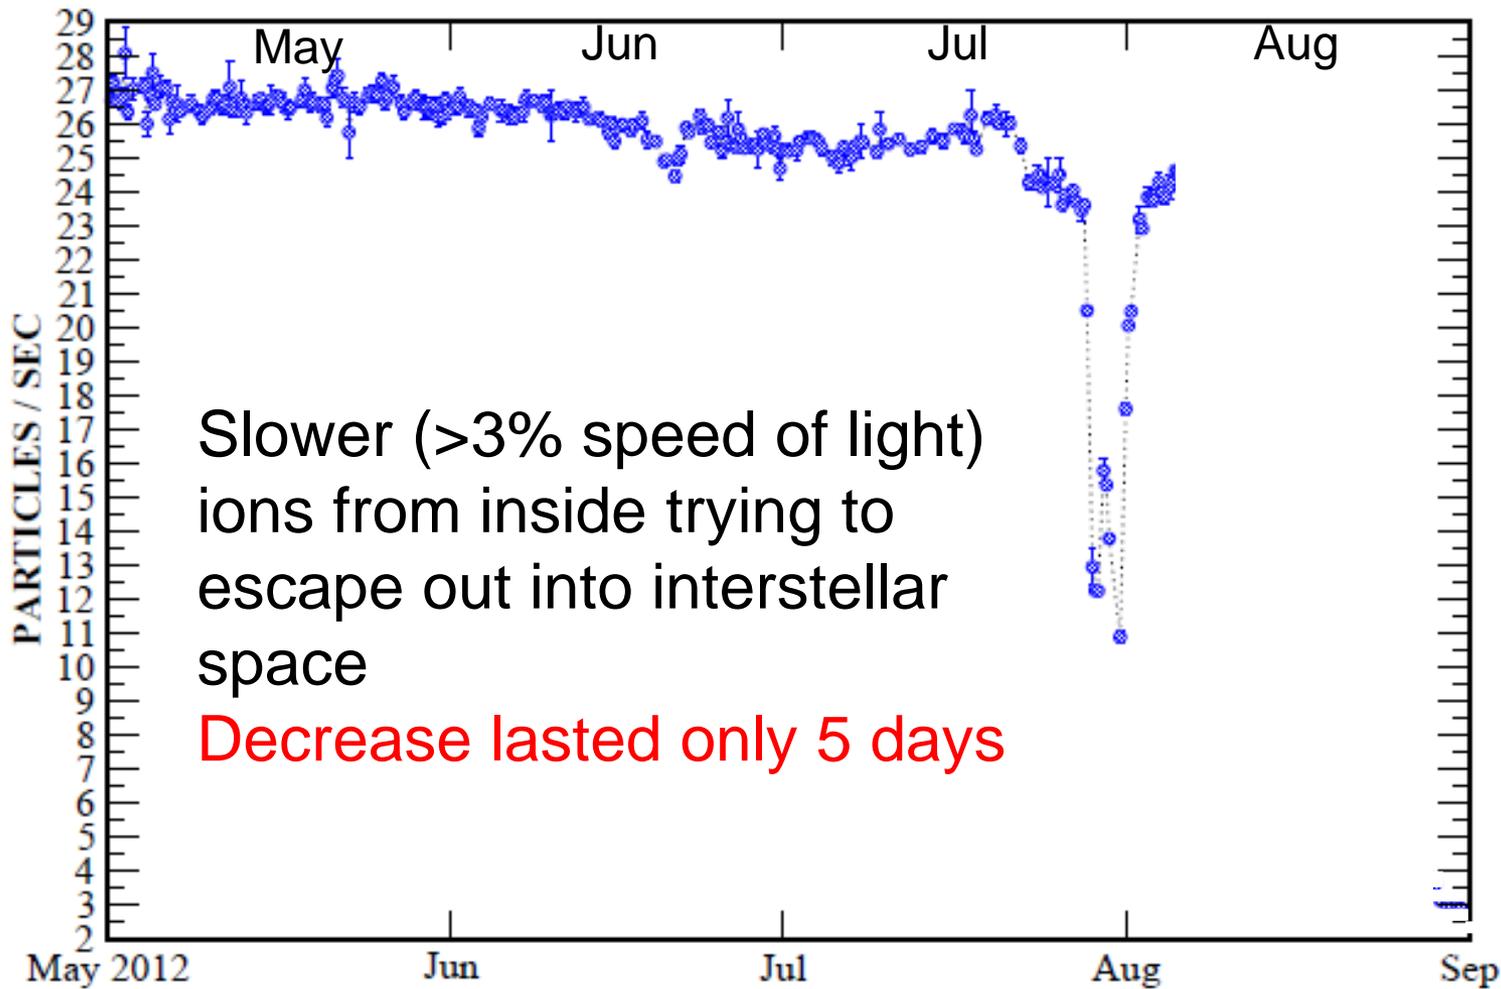

Slower (>3% speed of light)
ions from inside trying to
escape out into interstellar
space

Dropped by half; largest,
fastest drop seen

VOYAGER-1

> 0.5 MeV/nuc ions (6-Hour Avg)

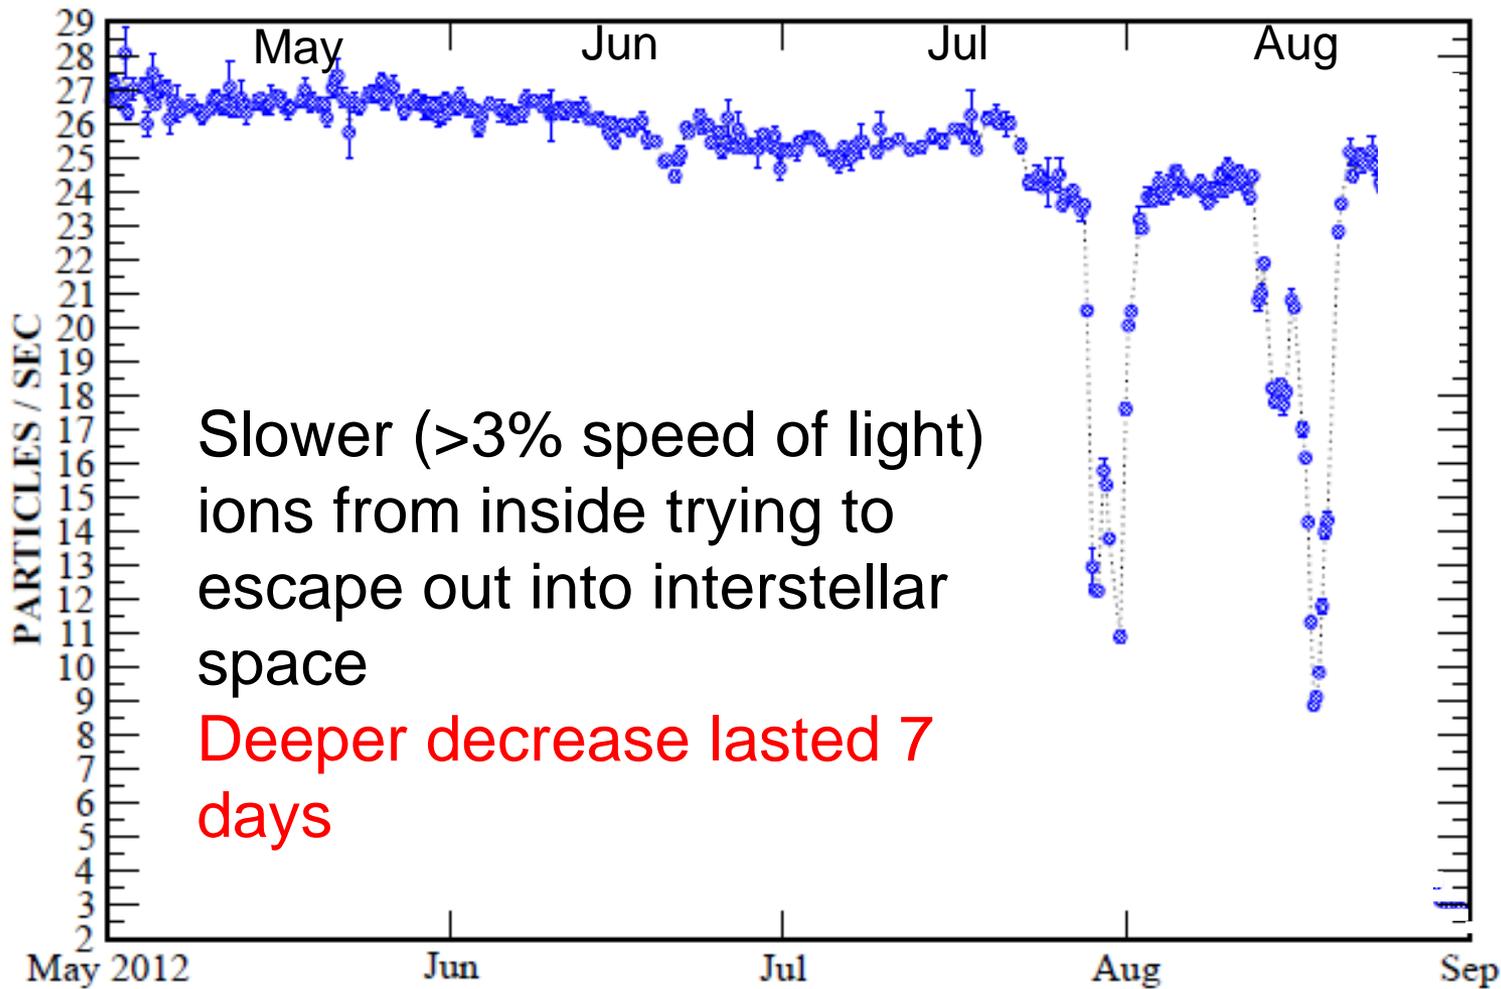

Slower (>3% speed of light)
ions from inside trying to
escape out into interstellar
space

Decrease lasted only 5 days

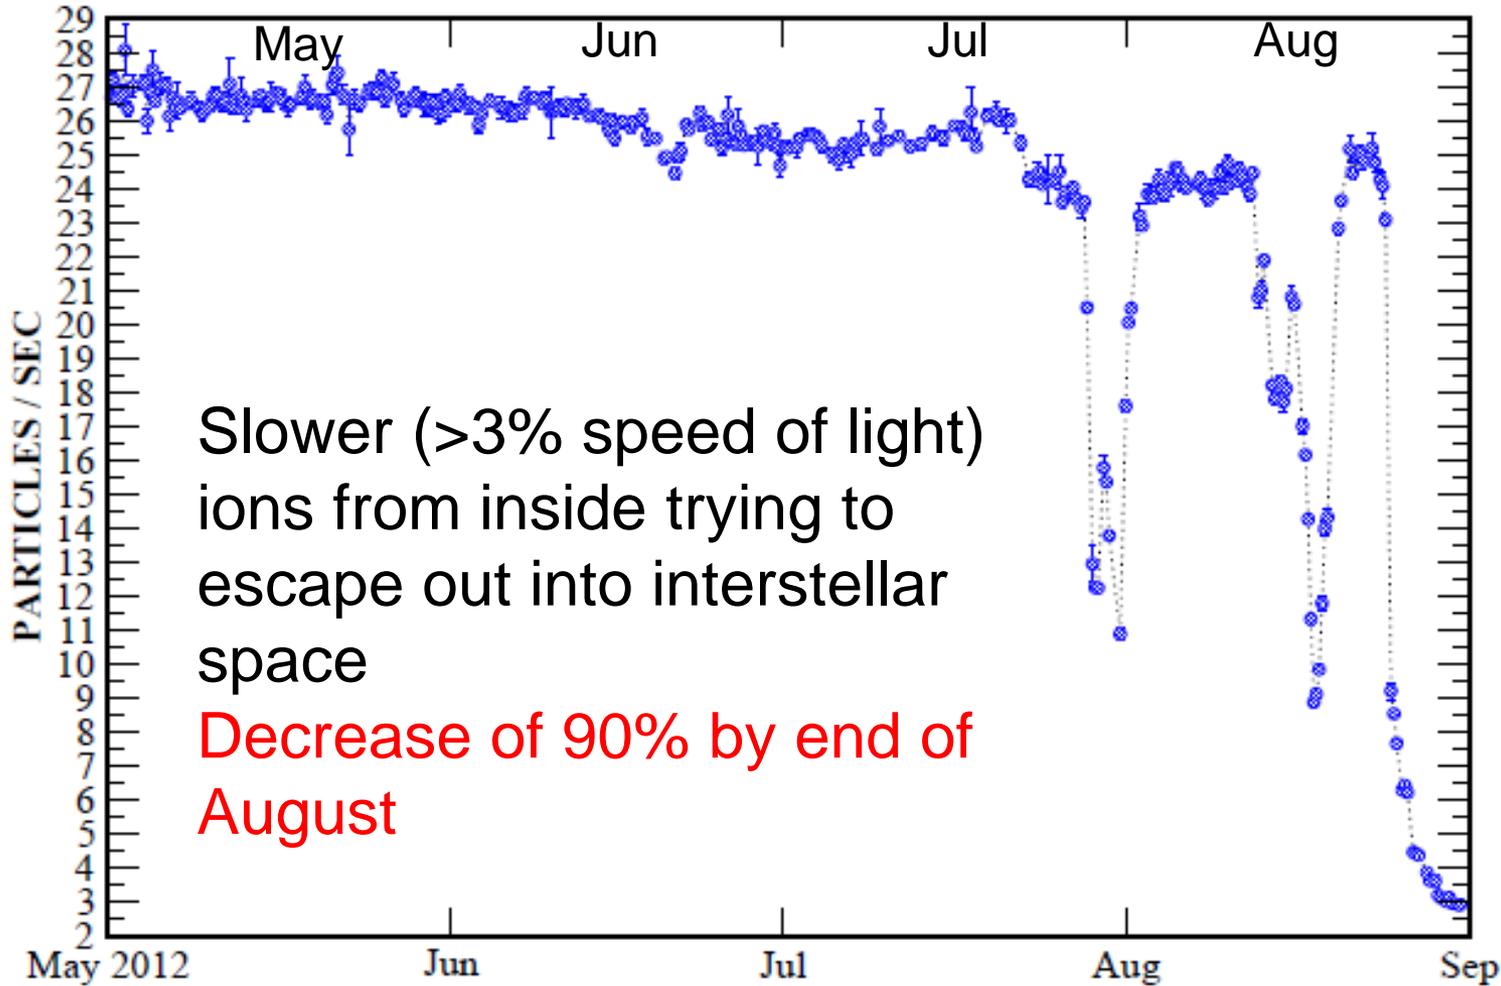

VOYAGER-1

> 0.5 MeV/nuc ions (6-Hour Avg)

VOYAGER-1

> 0.5 MeV/nuc ions (6-Hour Avg)

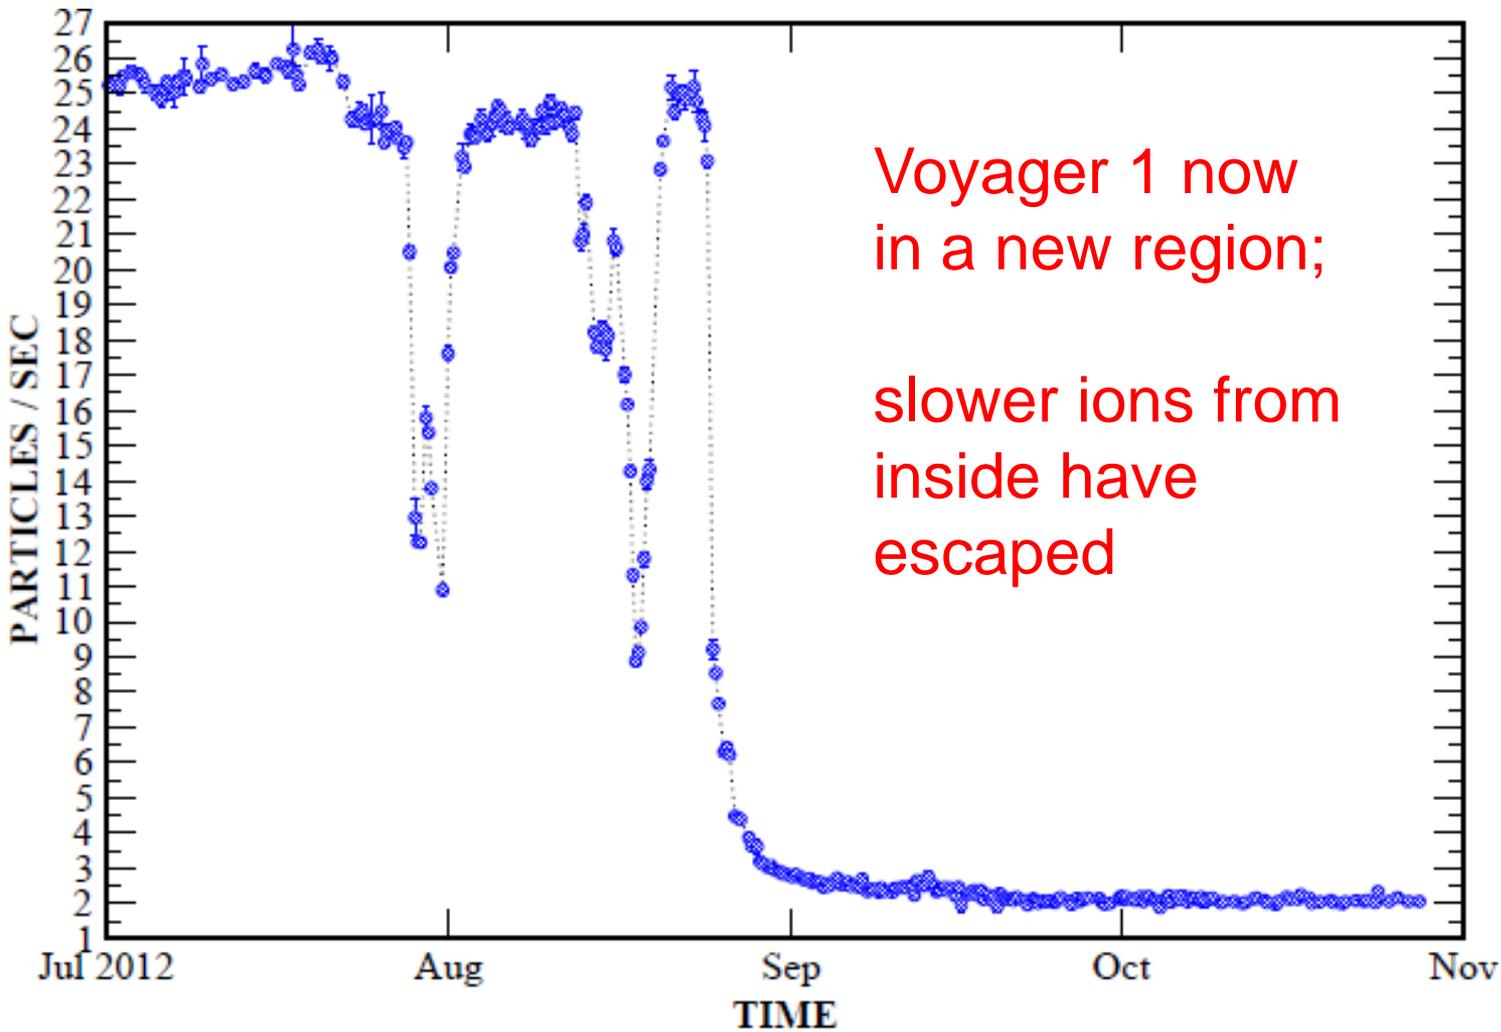

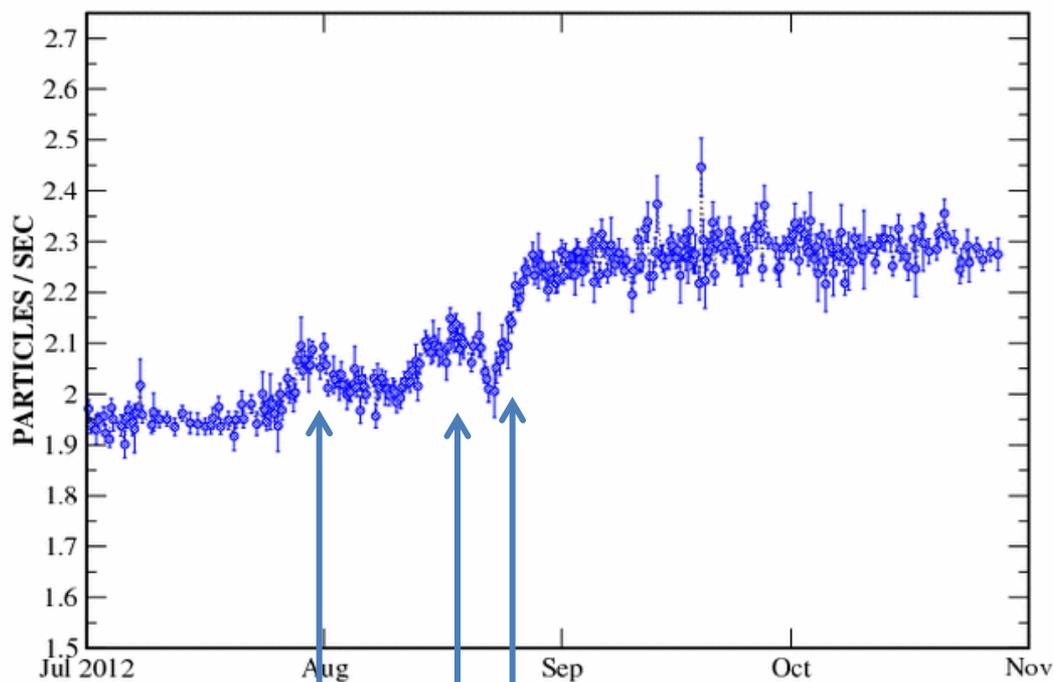

Slower (>3% speed of light) ions from inside trying to escape out into interstellar space

Decrease of 90% by end of August

VOYAGER-1

> 0.5 MeV/nuc ions (6-Hour Avg)

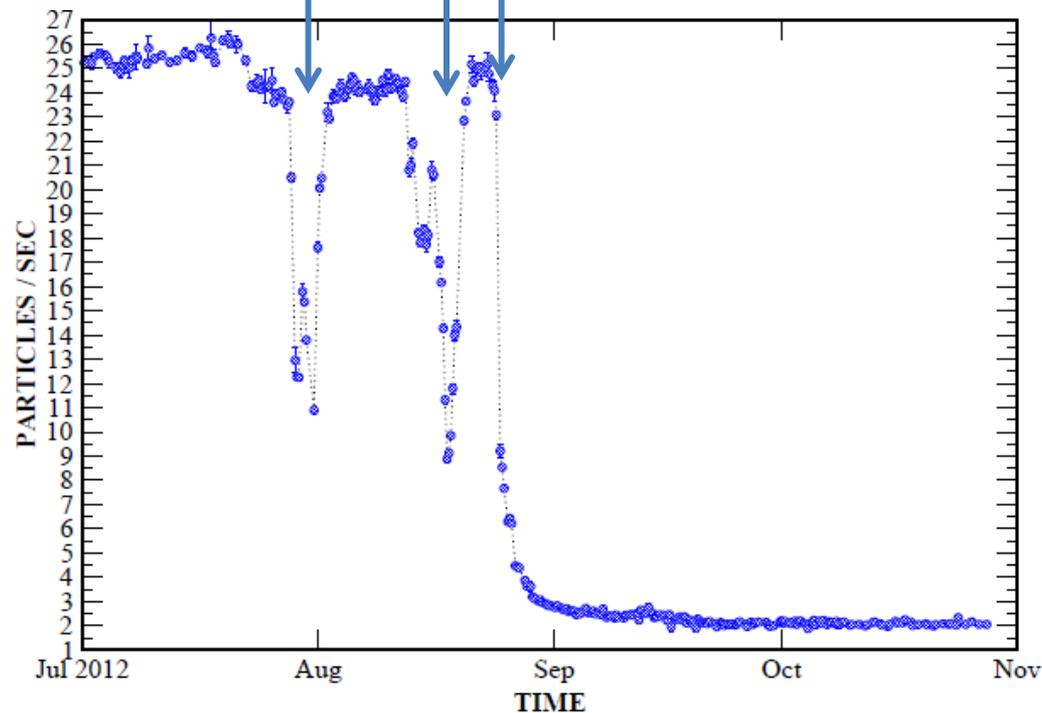

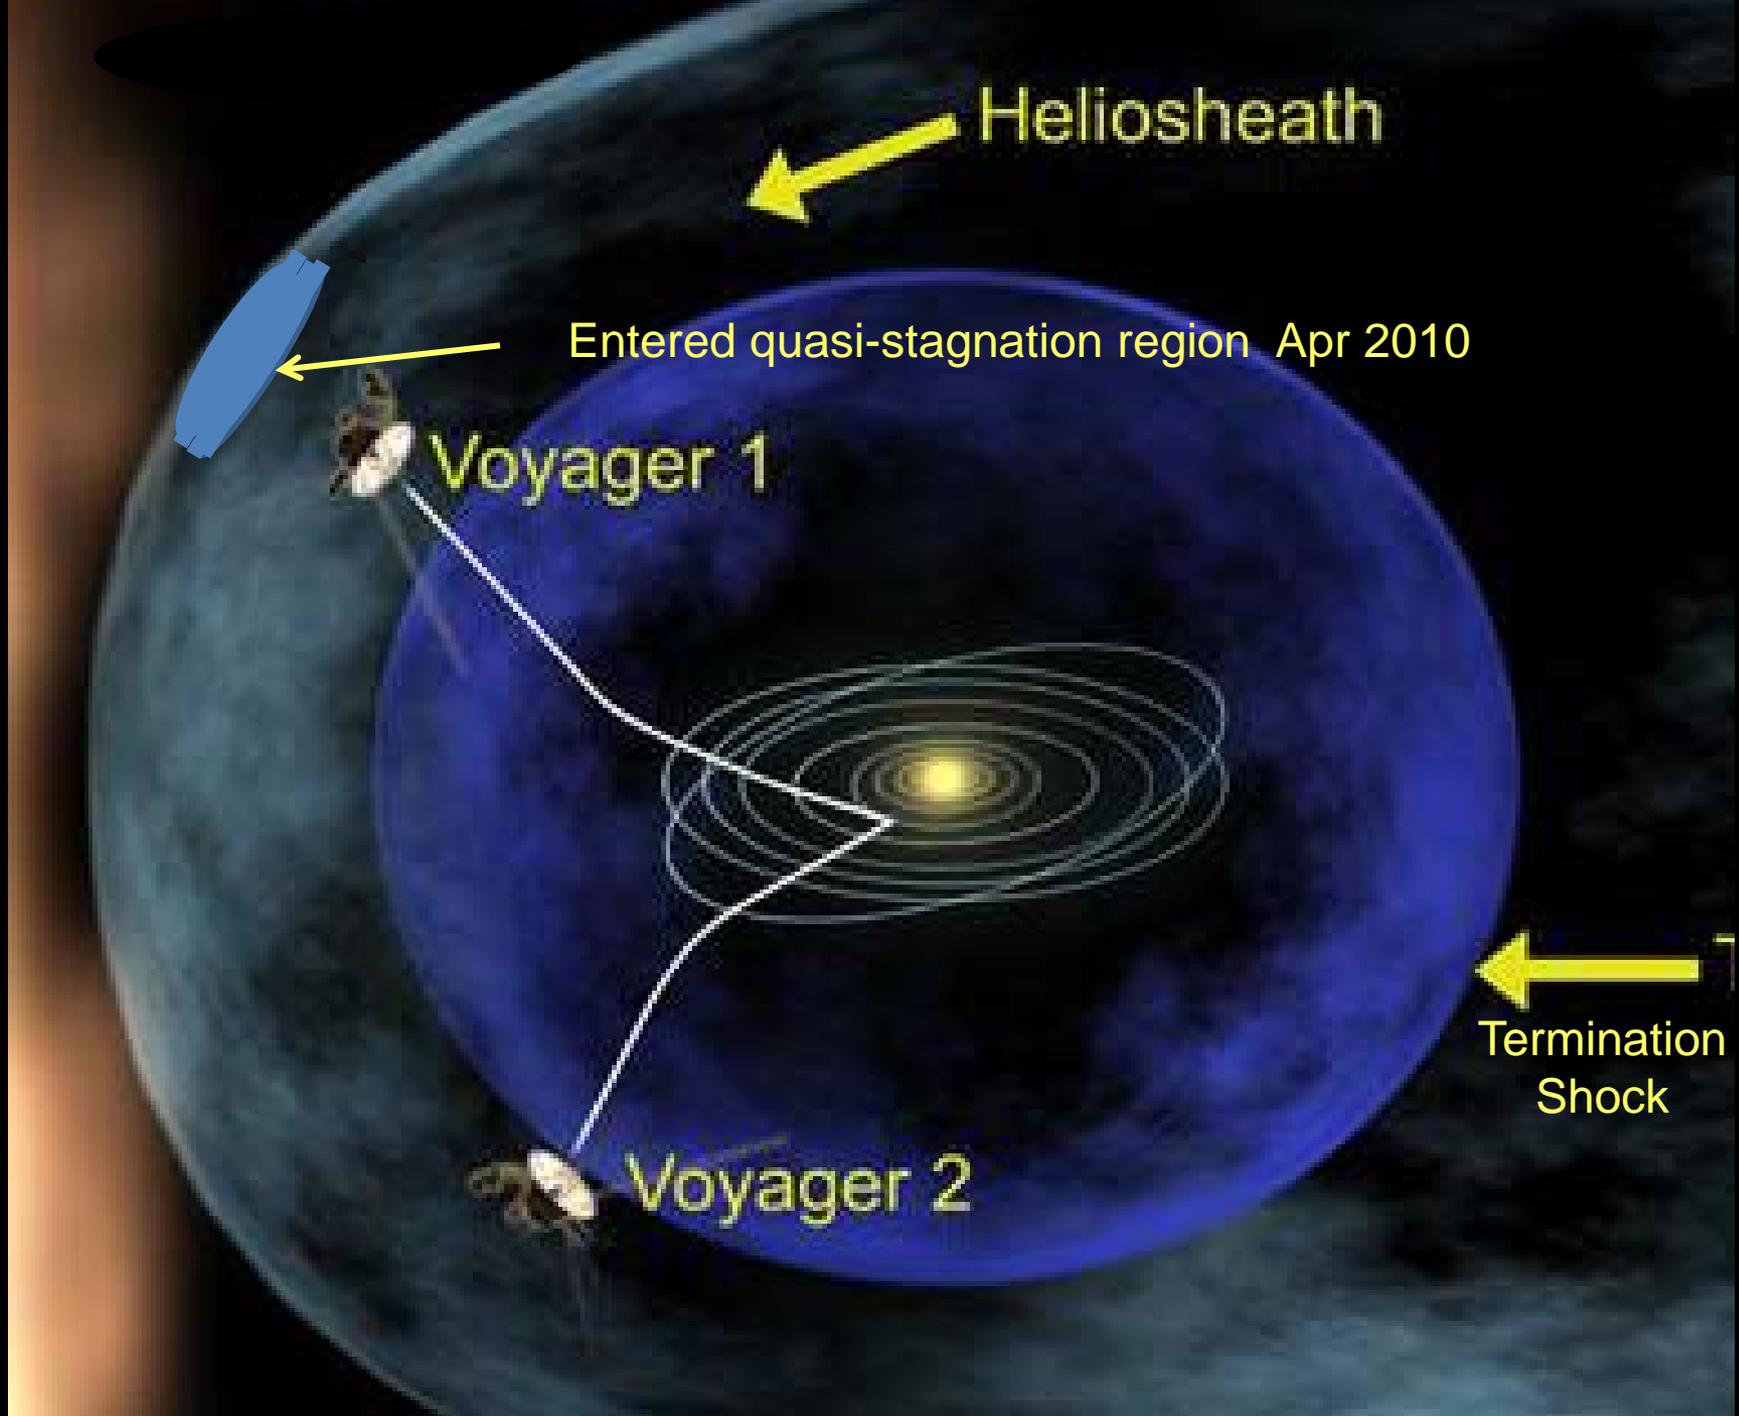

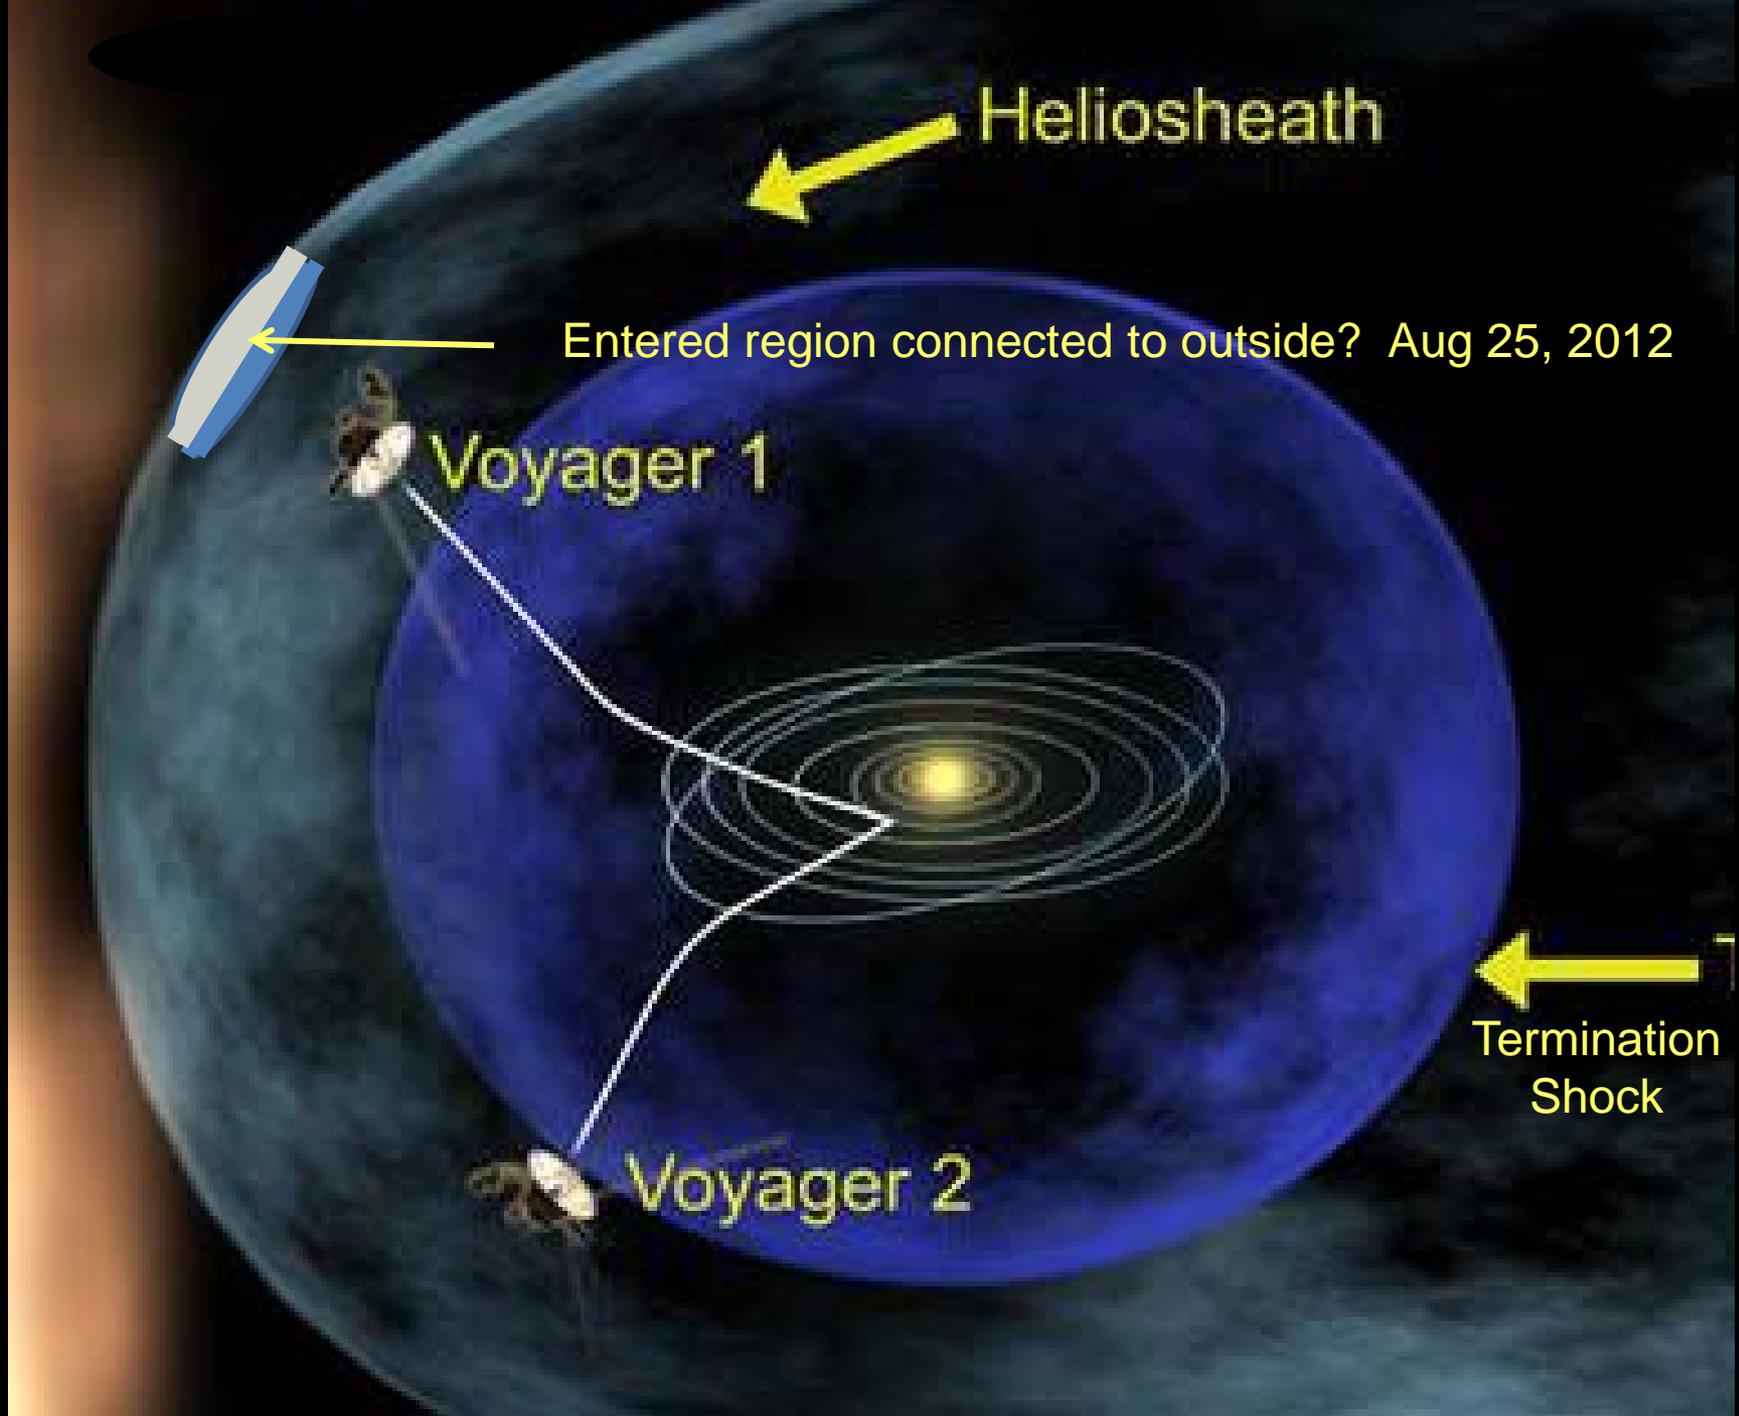

Cosmic rays from outside increased at same time as ions from inside escaped

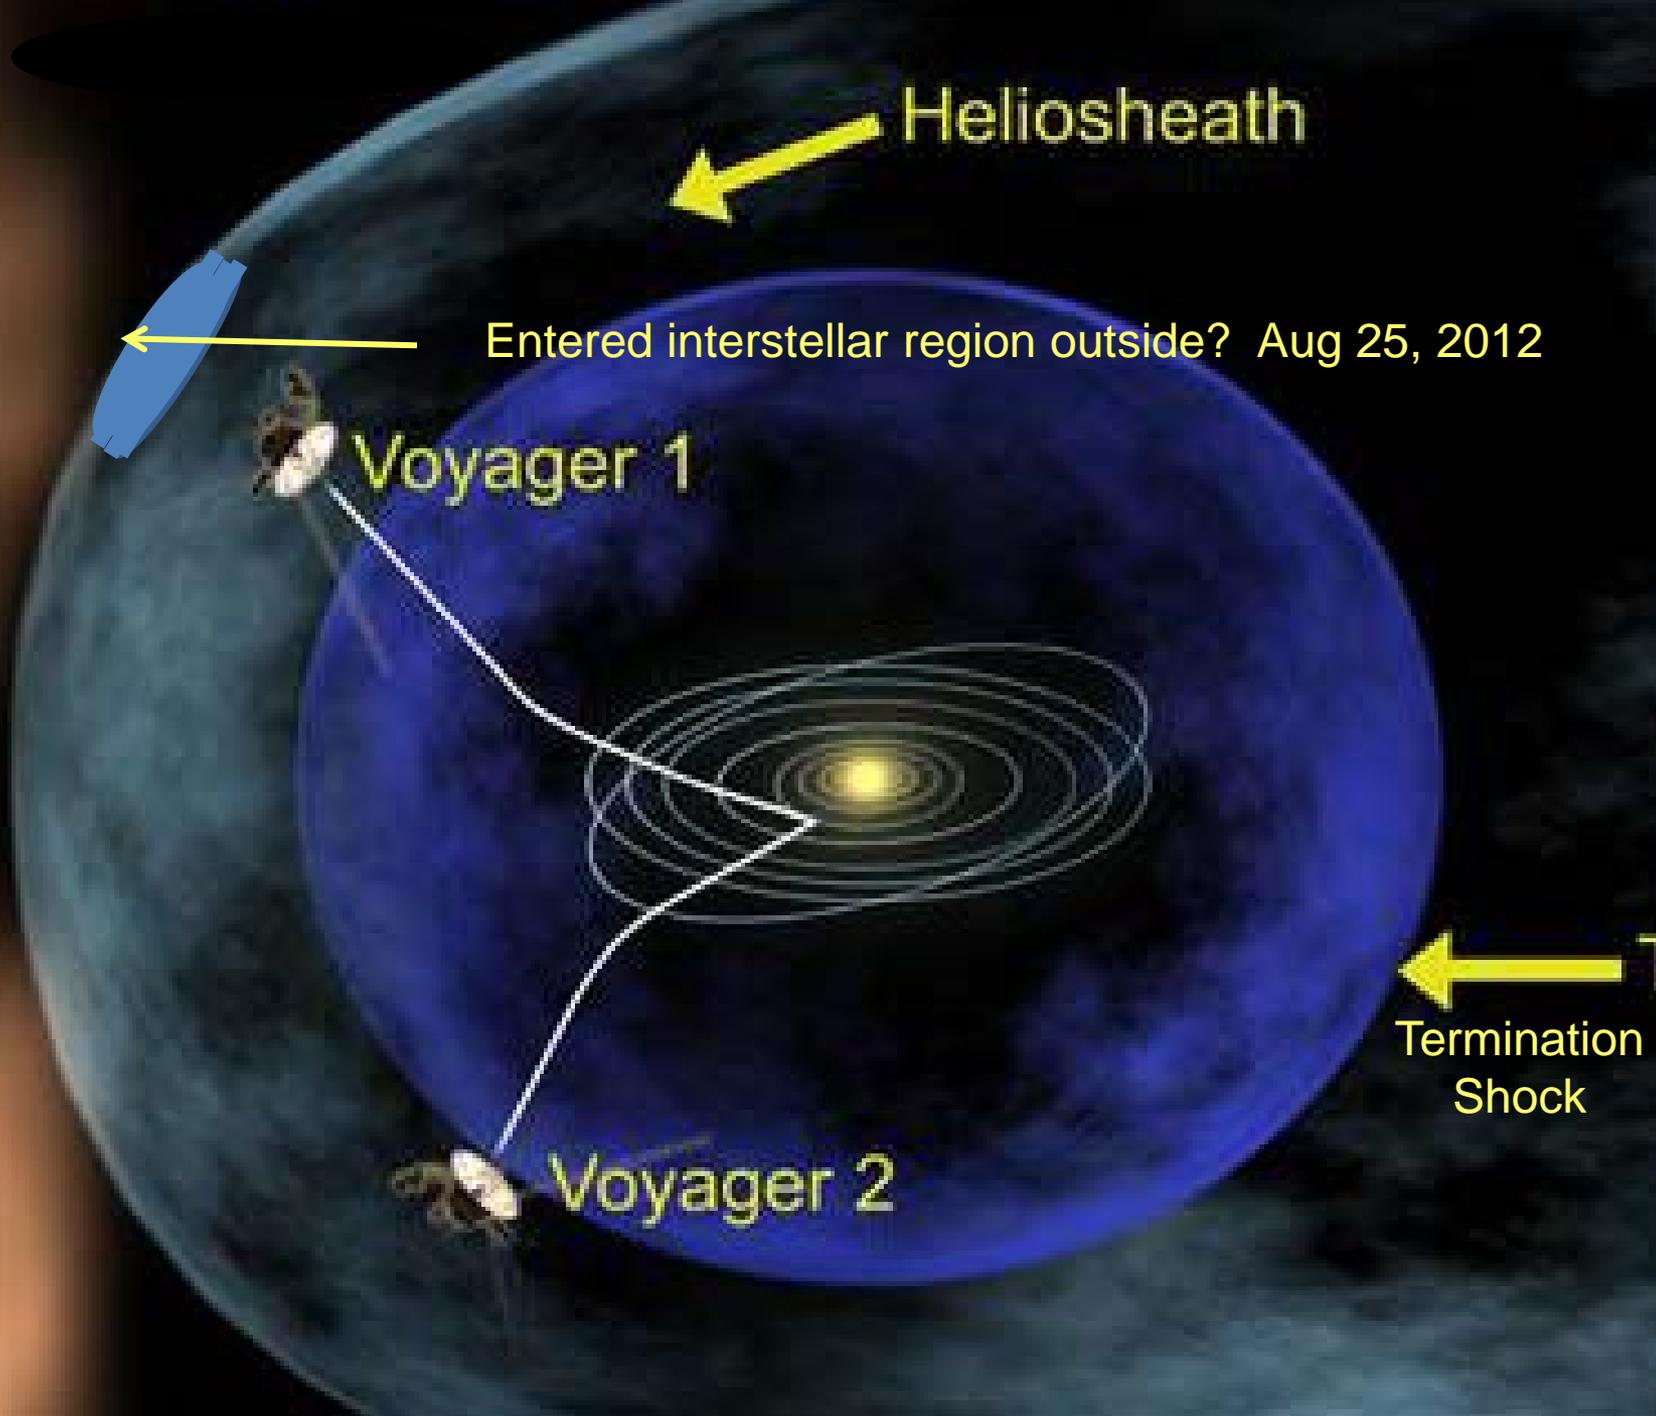

Is Voyager 1 in interstellar space, or is there a new region inside that is connected to interstellar space outside?

voyager.gsfc.nasa.gov

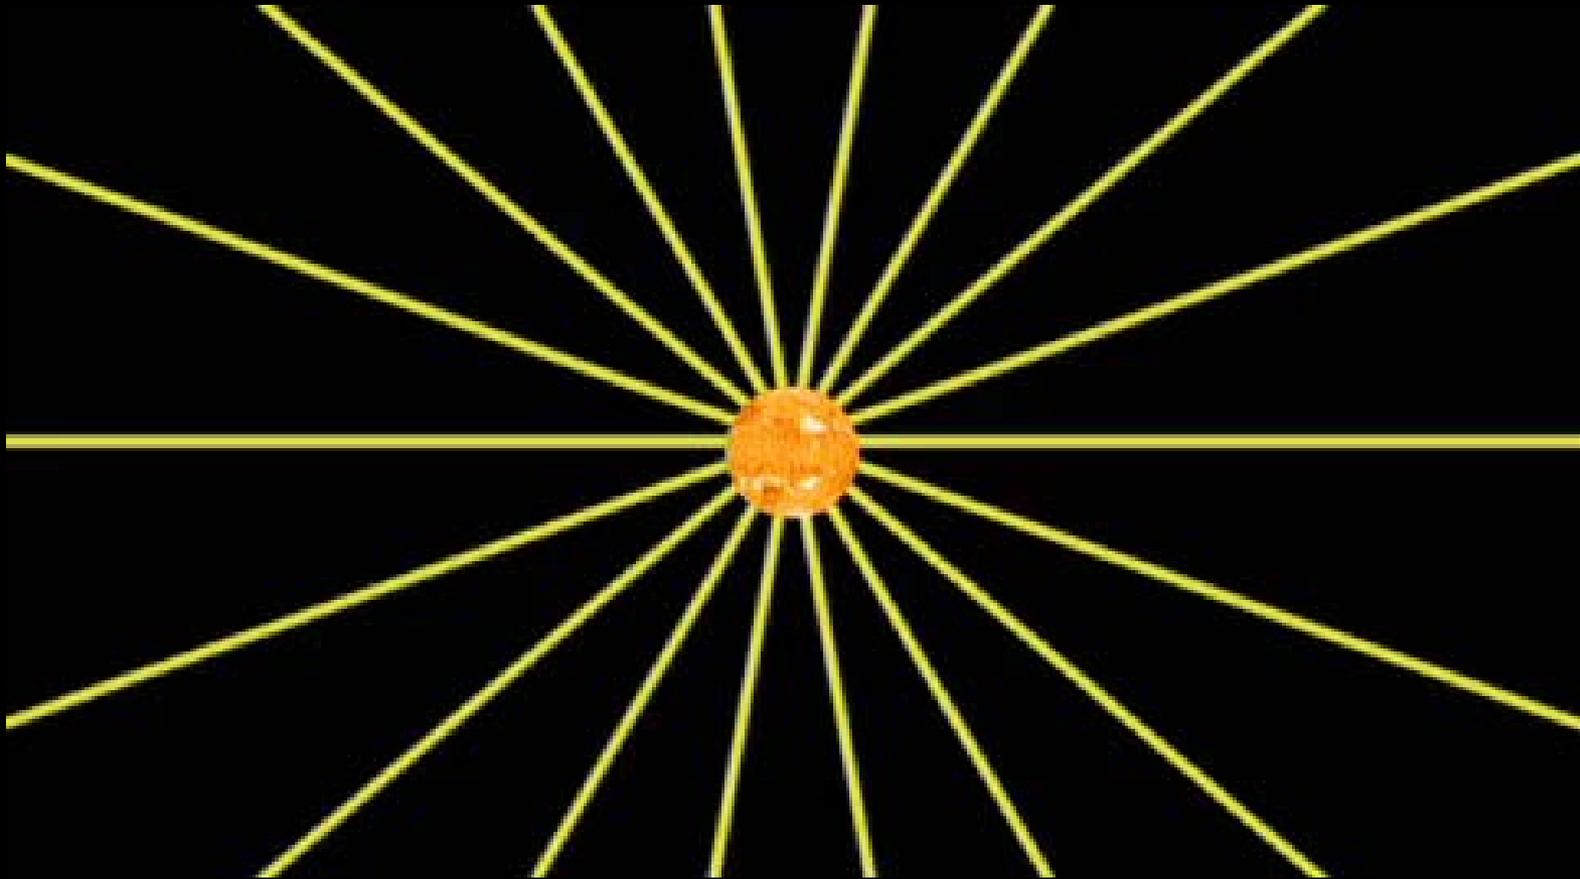

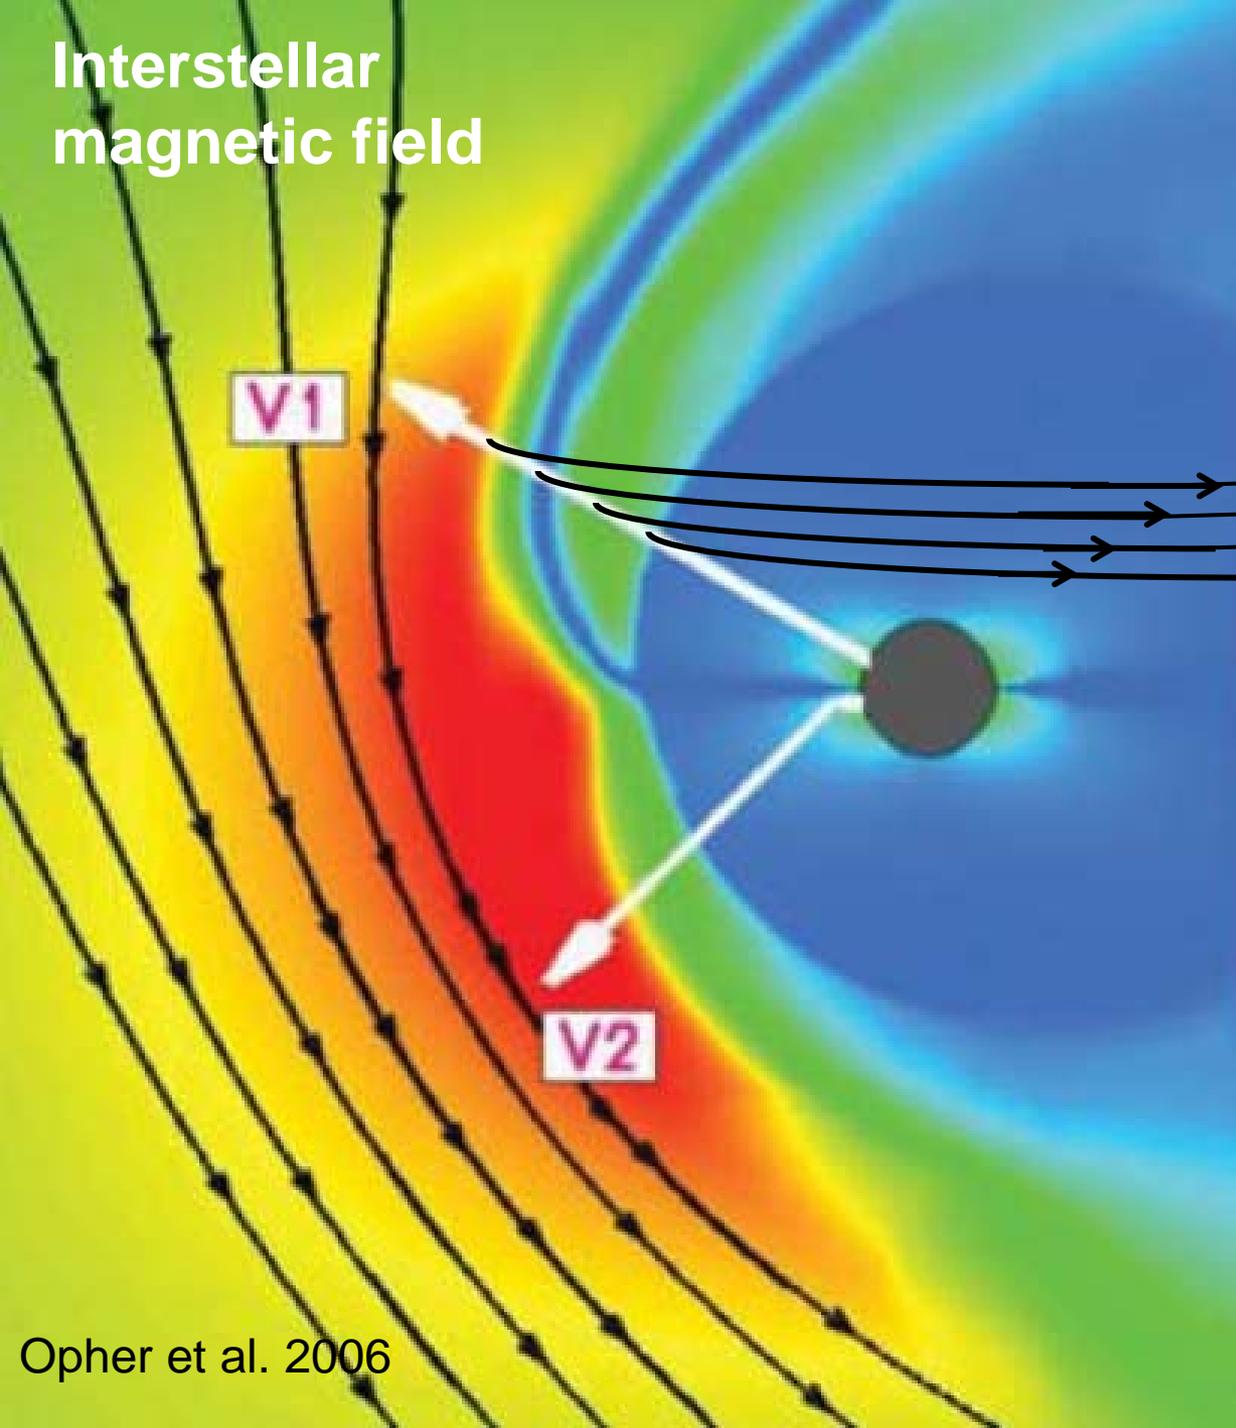

Spiral Magnetic Field

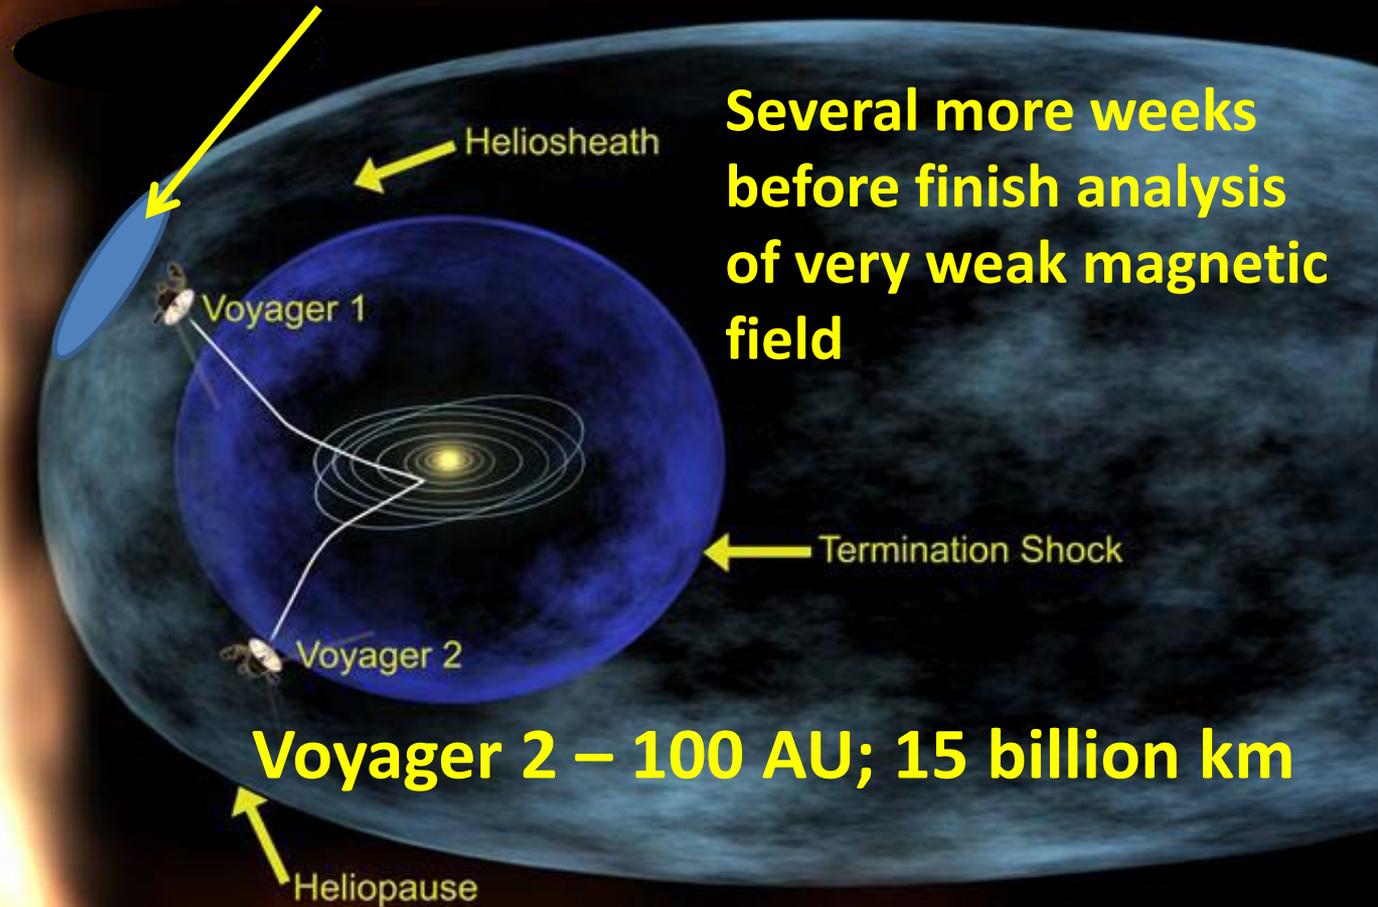

**Interstellar
magnetic field**

**Spiral magnetic field
from solar rotation is
east-west**

**Interstellar magnetic
field is inclined about
 60° to the east-west
direction**

Voyager 1 – 122 AU; 18 billion km

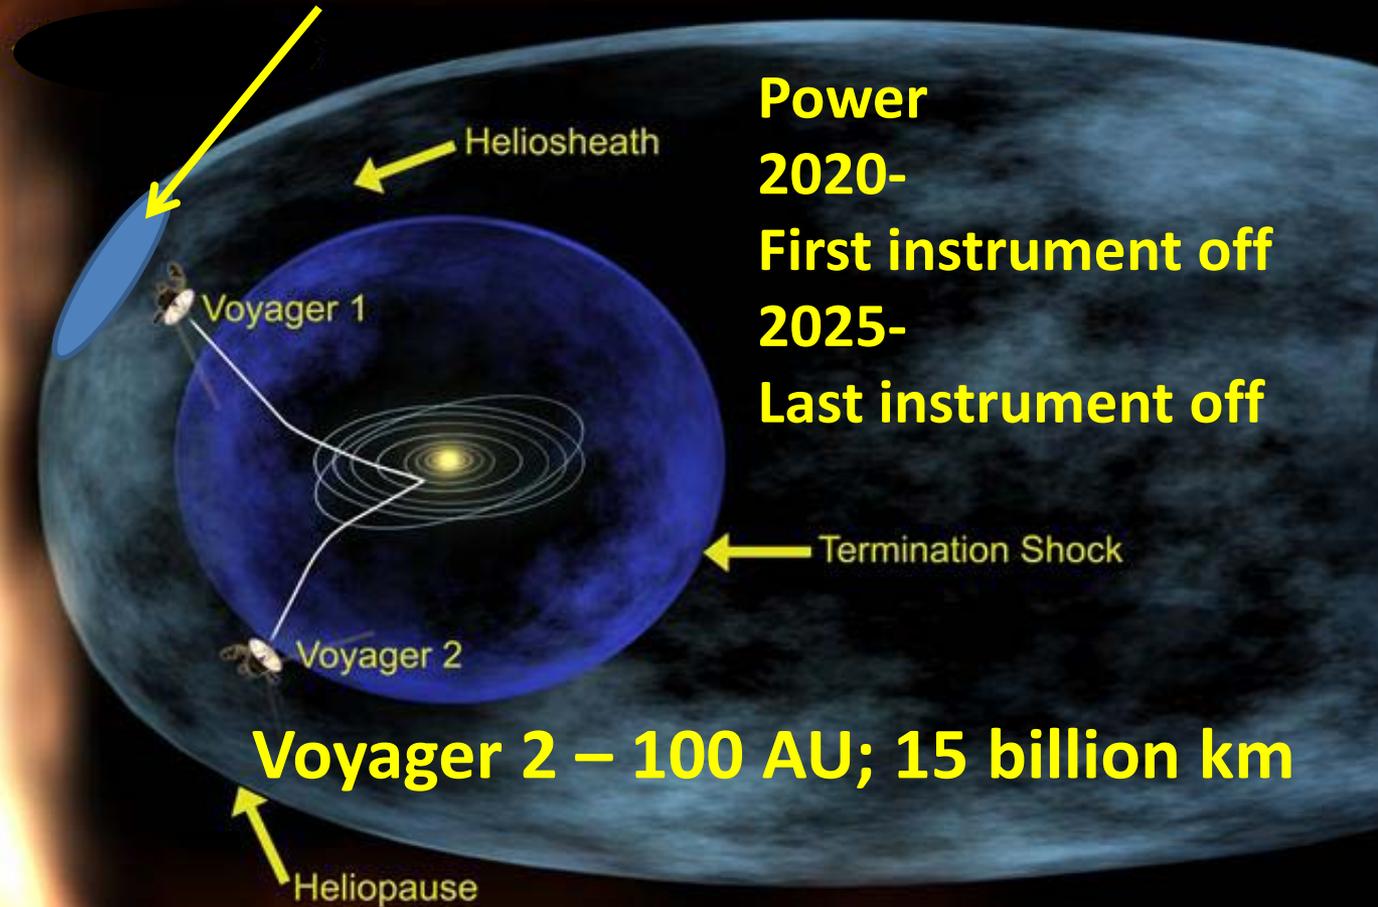

**Several more weeks
before finish analysis
of very weak magnetic
field**

Voyager 2 – 100 AU; 15 billion km

Heliosphere

Voyager 1 – 122 AU; 18 billion km

Power

2020-

**First instrument off
2025-**

Last instrument off

Voyager 2 – 100 AU; 15 billion km

Heliosphere

The Journey Continues...
