## **Measurement of the neutrino velocity with the OPERA detector in the CNGS beam**

*Monday, March 4, 2013 3:45 PM (45 minutes)*

The OPERA neutrino experiment located in the underground Gran Sasso Laboratory measured the velocity of neutrinos composing the CERN CNGS beam over a baseline of about 730 km. Dedicated upgrades of the CNGS timing system and of the OPERA detector, as well as a high precision geodesy campaign for the measurement of the neutrino baseline, allowed to set a limit on the muon neutrino velocity with respect to the speed of light of  $-1.8 \times 10^{-6} < (v - c) / c < 2.3 \times 10^{-6}$  at 90% C.L.
