Lync - Phone, voice mailbox, instant messaging... Get access to all of them from any place in the world.

Monday, 15 October 2012 16:30 (30 minutes)

Use your device (computer or portable device) as your main tool for unified communication. Check presence of your colleagues, make phone calls, get call notifications, listen to your voice mailbox, answer mails and send instant messages. Do it from any place around the world with internet access.

The presentation will summarize our experience in integrating Microsoft Lync, Alcatel PBX and Microsoft Exchange. The goal was to provide a system that integrates VoIP phone/mail/instant messaging and presence to enhance communication capabilities.
