A decade of Condor experience at Fermilab

Tuesday, 16 October 2012 11:00 (30 minutes)

The Condor Batch System has been used at Fermilab for a decade in the Run II Reprocessing and Analysis, the USCMS Tier 1 facility, and the FermiGrid General Purpose Grid Cluster. In this talk I present an overview of the operational stability, the scalability, and the best practices we have learned to build a 27,000 job slot campus grid using the Condor system.
